	<i>Preface</i>	<i>xi</i>
	<i>Prologue I—Course I</i>	<i>xv</i>
	<i>Prologue II—Fourier transforms, Fourier series, and Discrete Fourier Transforms</i>	<i>xix</i>
1	<i>Fourier Transforms</i>	1
1.1	Definitions and formal calculations	1
1.2	Algebraic properties of Fourier transforms	9
1.3	Examples	12
1.4	Analytic properties of Fourier transforms	17
1.5	Convolution	22
1.6	Approximate identities and examples	24
1.7	Pointwise inversion of the Fourier transform	33
1.8	Partial differential equations	41
1.9	Gibbs phenomenon	46
1.10	The $L^2(\mathbb{R})$ theory	50
	Exercises	60
2	<i>Measures and Distribution Theory</i>	71
2.1	Approximate identities and δ	71
2.2	Definition of distributions	74
2.3	Differentiation of distributions	79
2.4	The Fourier transform of distributions	88

2.5	Convolution of distributions	96
2.6	Operational calculus	104
2.7	Measure theory	110
2.8	Definitions from probability theory	117
2.9	Wiener's Generalized Harmonic Analysis (GHA)	125
2.10	$\exp\{it^2\}$	133
	Exercises	141
3	<i>Fourier Series</i>	153
3.1	Fourier series — definitions and convergence	153
3.2	History of Fourier series	166
3.3	Integration and differentiation of Fourier series	177
3.4	The $L^1(\mathbb{T})$ and $L^2(\mathbb{T})$ theories	185
3.5	$A(\mathbb{T})$ and the Wiener Inversion Theorem	196
3.6	Maximum entropy and spectral estimation	204
3.7	Prediction and spectral estimation	212
3.8	Discrete Fourier Transform	224
3.9	Fast Fourier Transform	239
3.10	Periodization and sampling	248
	Exercises	259
A	<i>Real Analysis</i>	277
B	<i>Functional Analysis</i>	287
C	<i>Fourier Analysis Formulas</i>	296
D	<i>Contributors to Fourier Analysis</i>	298
	<i>Bibliography</i>	305
	<i>Index of Notation</i>	323
	<i>Index of Names</i>	327
	<i>Index</i>	331
