

Contents

<i>Preface</i>	<i>page</i> vii
1 A small sample	1
1.1 The Haar wavelet	1
1.2 The Strömberg wavelet	5
2 General constructions	17
2.1 Basic concepts	17
2.2 Multiresolution analyses	20
2.3 From scaling function to multiresolution analysis	26
2.4 Construction of wavelets	32
2.5 Periodic wavelets	38
3 Some important wavelets	46
3.1 What to look for in a wavelet?	46
3.2 Meyer's wavelets	49
3.3 Spline wavelets	51
3.3.1 Spline functions.	52
3.3.2 Spline wavelets	56
3.3.3 Exponential decay of spline wavelets	58
3.3.4 Exponential decay of spline wavelets – another approach	61
3.4 Unimodular wavelets	65
4 Compactly supported wavelets	75
4.1 General constructions	75
4.2 Smooth wavelets	83
4.3 Bare hands construction	90
5 Multivariable wavelets	101
5.1 Tensor products	102
5.1.1 Multidimensional notation	105
5.2 Multiresolution analyses	106
5.3 Examples of multiresolution analyses	120

6	Function spaces	140
6.1	L_p -spaces	140
6.2	BMO and H_1	148
7	Unconditional convergence	168
7.1	Unconditional convergence of series	168
7.2	Unconditional bases	173
7.3	Unconditional convergence in L_p spaces	175
8	Wavelet bases in L_p and H_1	181
8.1	Projections associated with a multiresolution analysis	182
8.2	Unconditional bases in L_p and H_1	191
8.3	Haar wavelets	198
8.4	Polynomial bases	207
9	Wavelets and smoothness of functions	216
9.1	Modulus of continuity	216
9.2	Multiresolution analyses and moduli of continuity	222
9.3	Compression of wavelet decompositions	231
	<i>Appendix</i>	239
	<i>Bibliography</i>	254
	<i>Index</i>	260
