Foreword by Ingrid Daubechies vii

List of Figures xv

Preface xxi

Notation xxv

1 INTRODUCTION 1

- 1.1 Multiresolution methods 2
- 1.2 Historical perspective 3
- 1.3 Overview of the book 5

I IMAGES

2 HAAR: THE SIMPLEST WAVELET BASIS 9

- 2.1 The one-dimensional Haar wavelet transform 9
- 2.2 One-dimensional Haar basis functions 11
- 2.3 Orthogonality and normalization 16
- 2.4 Wavelet compression 18

3	IMAGE COMPRESSION	21
3.1	Two-dimensional Haar wavelet transforms	21
3.2	Two-dimensional Haar basis functions	25
3.3	Wavelet image compression	28
3.4	Color images	30
3.5	Summary	31
4	IMAGE EDITING	33
4.1	Multiresolution image data structures	34
4.2	Image editing algorithm	36
4.3	Boundary conditions	39
4.4	Display and editing at fractional resolutions	40
4.5	Image editing examples	41
5	IMAGE QUERYING	43
5.1	Image querying by content	45
5.2	Developing a metric for image querying	46
5.3	Image querying algorithm	50
5.4	Image querying examples	53
5.5	Extensions	55
 II CURVES		
<hr/>		
6	SUBDIVISION CURVES	61
6.1	Uniform subdivision	62
6.2	Nonuniform subdivision	66
6.3	Evaluation masks	68
6.4	Nested spaces and refinable scaling functions	72
7	THE THEORY OF MULTIREOLUTION ANALYSIS	79
7.1	Multiresolution analysis	80
7.2	Orthogonal wavelets	85

7.3	Semiorthogonal wavelets	89
7.4	Biorthogonal wavelets	97
7.5	Summary	107
8	MULTIRESOLUTION CURVES	109
8.1	Related curve representations	110
8.2	Smoothing a curve	111
8.3	Editing a curve	112
8.4	Scan conversion and curve compression	120
9	MULTIRESOLUTION TILING	125
9.1	Previous solutions to the tiling problem	126
9.2	The multiresolution tiling algorithm	129
9.3	Time complexity	135
9.4	Tiling examples	136
 III SURFACES		
<hr/>		
10	SURFACE WAVELETS	141
10.1	Overview of multiresolution analysis for surfaces	142
10.2	Subdivision surfaces	143
10.3	Selecting an inner product	151
10.4	A biorthogonal surface wavelet construction	152
10.5	Multiresolution representations of surfaces	158
11	SURFACE APPLICATIONS	161
11.1	Conversion to multiresolution form	161
11.2	Surface compression	163
11.3	Continuous level-of-detail control	164
11.4	Progressive transmission	165
11.5	Multiresolution editing	165
11.6	Future directions for surface wavelets	166

IV PHYSICAL SIMULATION

- 12 VARIATIONAL MODELING 171**
- 12.1 Setting up the objective function 172
 - 12.2 The finite-element method 173
 - 12.3 Using finite elements in variational modeling 173
 - 12.4 Variational modeling using wavelets 177
 - 12.5 Adaptive variational modeling 179
- 13 GLOBAL ILLUMINATION 181**
- 13.1 Radiosity 181
 - 13.2 Finite elements and radiosity 183
 - 13.3 Wavelet radiosity 186
 - 13.4 Enhancements to wavelet radiosity 192
- 14 FURTHER READING 195**
- 14.1 Theory of multiresolution analysis 195
 - 14.2 Image applications 197
 - 14.3 Curve and surface applications 198
 - 14.4 Physical simulation 199

V APPENDICES

- A LINEAR ALGEBRA REVIEW 203**
- A.1 Vector spaces 203
 - A.2 Bases and dimension 204
 - A.3 Inner products and orthogonality 205
 - A.4 Norms and normalization 206
 - A.5 Eigenvectors and eigenvalues 207
- B B-SPLINE WAVELET MATRICES 209**
- B.1 Haar wavelets 210
 - B.2 Endpoint-interpolating linear B-spline wavelets 211

B.3	Endpoint-interpolating quadratic B-spline wavelets	212
B.4	Endpoint-interpolating cubic B-spline wavelets	214
C	MATLAB CODE FOR B-SPLINE WAVELETS	217

Bibliography 223
