Introduction	1
<hr/>	
Part One. The Uncertainty Principle Without Complex Variables	
<hr/>	
1. Functions and Charges with Semibounded Spectra	11
§1. The Uncertainty Principle for Charges with Semibounded Spectra. The F. and M. Riesz Theorem .	12
§2. Sharpness of the F. and M. Riesz Theorem. The Rudin–Carleson Theorem	21
§3. A Quantitative Refinement of the F. and M. Riesz Theorem	23
§4. The De Leeuw–Katznelson Theorem	29
§5. One More Quantitative Refinement of the F. and M. Riesz Theorem	32
§6. Some Multidimensional Generalizations and Analogs of the F. and M. Riesz Theorem. The Approach of Aleksandrov and Shapiro	41
§7. Perturbed Plus-Charges	47
Notes	51
2. Some Topics Related to the Harmonic Analysis of Charges	53
§1. r -Charges	53
§2. Cantor Measures	57
§3. The Riesz Products	61
§4. The Ivashev-Musatov Theorem	66
§5. The Lemma on the Optimal Régime. The Role of Regularity Properties of the Majorant in the Ivashev-Musatov Theorem	73
§6. Deep Zeros and Sparse Spectra. A “Real” Proof of the Mandelbrojt Theorem	81
Notes	86

3. Hilbert Space Methods	87
§1. Mutually Annihilating Pairs of Subspaces	88
§2. Annihilation of Supports and Spectra of Finite Volume. The Amrein–Berthier and Slepian–Pollak Theorems	97
§3. Functions with Sparse Spectra. The Mikheyev Theorem ...	102
§4. Supports Strongly Annihilating any Bounded Spectrum. The Logvinenko–Sereda Theorem	112
Notes	116

Part Two. Complex Methods

1. The Uncertainty Principle from the Complex Point of View. First Examples	119
§1. Introductory Remarks	119
§2. The Limit Speed of Decay of the Fourier Transform of a Rapidly Decreasing Function. The Dzhrbashyan Theorem ..	128
§3. A Complex Proof of the Mandelbrojt Theorem	137
§4. The UP for Plus-Functions from a New Point of View	151
§5. Hardy Classes in the Upper Half-Plane	165
§6. The Lindelöf Theorem. Entire Functions of the Cartwright Class	182
Notes	195
2. The Logarithmic Integral Diverges	197
§1. Divergence of a Logarithmic Integral and Some Forms of the UP for Functions and Charges with Rapidly Decreasing Amplitudes. The Beurling Theorem	197
§2. Charges with a Spectral Gap	208
§3. One-Sided Decrease of Amplitudes. The Volberg Theorems ..	221
§4. One-Sided Decrease and One-sided Growth of Amplitudes. The Borichev Approach	246
Notes	265
3. The Logarithmic Integral Converges	267
§1. Outer Functions. Sharpness of Some Forms of the UP	268
§2. The Khinchin–Ostrowski Theorem	278
§3. Unilateral Decrease of Amplitudes and the Size of Support. The Hruščev Theorem	283
§4. The Hruščev Theorem: the End of the Proof	295
§5. The First Beurling–Malliavin Theorem	306
§6. Functions with Finite Dirichlet Integral in a Half-Plane and Their Boundary Values	334
§7. Logarithmic Potential and Distributions of Finite Energy ..	353

§8. The Spectral Gap Problem Revisited	369
§9. The Sapogov Problem: Characteristic Functions with a Spectral Gap	376
Notes	393
4. Missing Frequencies and the Diameter of the Support. The Second Beurling–Malliavin Theorem and the Fabry Theorem	395
§1. Statement of the Problem. The Diameter of a Divisor	396
§2. Systems of Long and Short Intervals. A Covering Lemma ..	399
§3. Three Definitions of the Integral Density of a Measure	402
§4. The Estimate $\mathcal{D}_3(\mu) \leq R(\mu)$	409
§5. The Estimate $\mathcal{D}_1(\mu) \geq R(\mu)$	410
§6. The Fabry Theorem: Technical Preliminaries	424
§7. The Fabry and Carlson–Landau Theorems. The First Proof	431
§8. Sharpness of the Carlson–Landau Theorem	437
§9. The Fabry Theorem. The Second Proof	443
§10. The Fabry Theorem. The Third Proof	446
§11. The Amrein–Berthier Theorem Revisited. The Nazarov Approach	455
§12. Concluding Remarks. The Fabry Phenomenon	463
Notes	470
5. Local and Non-local Convolution Operators	473
§1. Symbols of Local Operators	475
§2. Semirational Symbols and Complete Antilocality	484
§3. The Cauchy Problem for the Laplace Equation	488
§4. Complete Antilocality of One-Dimensional M. Riesz Potentials	508
Notes	520
References	523
