Preface . . . . . **vix**

Chapter 1 Fourier Series and Integrals **1**

1.1. Definitions and easy results 3
1.2. The Fourier transform 8
1.3. Convolution; approximate identities; Fejér's theorem 12
1.4. Unicity theorem; Parseval relation; Fourier–Stieltjes coefficients 17
1.5. The classical kernels 22
1.6. Summability; metric theorems 27
1.7. Pointwise summability 30
1.8. Positive definite sequences; Herglotz' theorem 35
1.9. The inequality of Hausdorff and Young 38
*1.10 Multiple Fourier series; Minkowski's theorem 40
*1.11 Measures with bounded powers; homomorphisms of $\mathbf{l}^1$ 44

Chapter 2. The Fourier Integral **51**

2.1. Introduction 53
2.2. Kernels on $\mathbf{R}$ 55
2.3. The Plancherel theorem 60
2.4. Another convergence theorem; the Poisson summation formula 63
*2.5. Finite cyclic groups; Gaussian sums 66

*Starred sections present material that is less fundamental.

Chapter 3. Hardy Spaces 75

3.1. $\mathbf{H}^p(\mathbf{T})$ 77
3.2. Invariant subspaces, factoring, proof of the theorem of F. and M. Riesz 81
3.3. Theorems of Beurling and Szegö 86
3.4. Structure of inner functions 91
3.5. Theorem of Hardy and Littlewood; Hilbert's inequality 94
3.6. Hardy spaces on the line 99

Chapter 4. Conjugate Functions 107

4.1. Conjugate series and functions 109
4.2. Theorems of Kolmogorov and Zygmund 112
4.3. Theorems of M. Riesz and Zygmund 117
4.4. The conjugate function as a singular integral 122
4.5. The Hilbert transform 127
4.6. Maximal functions 129
4.7. Rademacher functions; absolute Fourier multipliers 133

Chapter 5. Translation 143

5.1. Theorems of Wiener and Beurling; the Titchmarsh convolution theorem 145
5.2. The Tauberian theorem 148
5.3. Spectral sets of bounded functions 154
*5.4. A theorem of Szegö; theorem of Grużewska and Rajchman; idempotent measures . . 158

Chapter 6. Distribution 165

6.1. Equidistribution of sequences 167
6.2. Distribution of $(n_k u)$ 170
6.3. Dynamical systems; $(k^2 u)$ 172

Appendix. Integration by parts 177
