Preface

Introduction

| | |
|---|-----|
| Chapter I. Introduction to local fields | 1 |
| 1. Rademacher functions and the Walsh-Paley group | |
| 2. The 2-adic numbers and 2-series numbers | |
| 3. p-adic and p-series numbers | |
| 4. Classification of local fields | |
| 5. Properties of local fields | |
| 6. More facts about K | |
| 7. The dual of K^* | |
| 8. The dual of K^+ | |
| 9. Notes for Chapter I | |
| Chapter II. Fourier analysis on K , the one-dimensional case . . . | 20 |
| 1. The L^1 theory | |
| 2. The L^2 theory | |
| 3. Distributions on K | |
| 4. The Mellin transform: Fourier analysis on K^* | |
| 5. Gamma, Beta and Bessel functions. The Hankel transform | |
| 6. Some elementary aspects of Fourier analysis on the ring of integers on a local field | |
| 7. Notes for Chapter II | |
| Chapter III. Fourier analysis on K^n | 115 |
| 1. The L^1 theory | |
| 2. The L^2 theory | |
| 3. Distributions on K^n | |
| 4. Riesz fractional integration | |
| 5. Bessel potentials | |
| 6. The relation of I^α and J^α | |
| 7. Lebesgue spaces of Bessel potentials | |
| 8. An elementary aspect of the Lipschitz theory | |
| 9. Duals of the L_α^p spaces | |
| 10. Operators that commute with translations | |
| 11. Notes for Chapter III | |

| | |
|--|-----|
| Chapter IV. Regularization and the theory of regular and sub-regular functions | 168 |
| 1. Regular functions on $K^n \times \mathbb{Z}$ | |
| 2. More about Lipschitz spaces | |
| 3. Sub-regular functions, domains, regular majorants and non-tangential convergence | |
| 4. Notes for Chapter IV | |
| Chapter V. The Littlewood-Paley function and some applications | 195 |
| 1. The Littlewood-Paley function | |
| 2. Local equivalence of non-tangential convergence, non-tangential boundedness and the existence of S_f | |
| 3. Notes for Chapter V | |
| Chapter VI. Multipliers and singular integral operators | 217 |
| 1. Multipliers | |
| 2. Special cases of the multiplier theorem | |
| 3. Applications of the multiplier theorem to Fourier series | |
| 4. Singular integral operators | |
| 5. Notes for Chapter VI | |
| Chapter VII. Conjugate systems of regular functions and an F. and M. Riesz theorem | 241 |
| 1. A fundamental lemma | |
| 2. Construction of conjugate systems on $K \times \mathbb{Z}$ | |
| 3. F. and M. Riesz theorem | |
| 4. Notes for Chapter VII | |
| Chapter VIII. Almost everywhere convergence of Fourier series . . | 262 |
| 1. The results | |
| 2. Notation and preliminary results | |
| 3. Proof of the Basic Result | |
| A. Reduction to the Basic Lemma | |
| B. Development of the assertions | |
| C. Proof of the Basic Lemma | |
| D. Proof of the assertions | |
| 4. Notes for Chapter VIII | |
| Bibliography | 286 |
