

CONTENTS

INTRODUCTION.....	1
1. Plancherel's Theorem.....	1
2. The Fourier Transform of a Function Vanishing Exponentially.....	3
3. The Fourier Transform of a Function in a Strip.....	3
4. The Fourier Transform of a Function in a Half-Plane.....	8
5. Theorems of the Phragmén-Lindelöf Type.....	9
6. Entire Functions of Exponential Type.....	12
CHAPTER I. QUASI-ANALYTIC FUNCTIONS.....	14
7. The Problem of Quasi-Analytic Functions.....	14
8. Proof of the Fundamental Theorem on Quasi-Analytic Functions.....	17
9. Proof of Carleman's Theorem.....	20
10. The Modulus of the Fourier Transform of a Function Vanishing for Large Arguments.....	24
CHAPTER II. SZÁSZ'S THEOREM.....	26
11. Certain Theorems of Closure.....	26
12. Szász's Theorem.....	32
CHAPTER III. CERTAIN INTEGRAL EXPANSIONS.....	37
13. The Integral Equations of Laplace and Planck.....	37
14. The Integral Equation of Stieltjes.....	41
15. An Asymptotic Series.....	44
16. Watson Transforms.....	44
CHAPTER IV. A CLASS OF SINGULAR INTEGRAL EQUATIONS.....	49
17. The Theory of Hopf and Wiener.....	49
18. A Note on the Volterra Equation.....	58
19. A Theorem of Hardy.....	64
CHAPTER V. ENTIRE FUNCTIONS OF THE EXPONENTIAL TYPE.....	68
20. Classical Theorems Concerning Entire Functions.....	68
21. A Tauberian Theorem Concerning Entire Functions.....	70
22. A Condition that the Roots of an Entire Function be Real.....	75
23. A Theorem on the Riemann Zeta Function.....	75
24. Some Theorems of Titchmarsh.....	78
25. A Theorem of Pólya.....	81
26. Another Theorem of Pólya.....	83
CHAPTER VI. THE CLOSURE OF SETS OF COMPLEX EXPONENTIAL FUNCTIONS.....	86
27. Methods from the Theory of Entire Functions.....	86
28. The Duality between Closure and Independence.....	95
CHAPTER VII. NON-HARMONIC FOURIER SERIES AND A GAP THEOREM.....	100
29. A Theorem Concerning Closure.....	100
30. Non-Harmonic Fourier Series.....	108
31. A New Class of Almost Periodic Functions.....	116
32. Theorems on Lacunary Series.....	123
CHAPTER VIII. GENERALIZED HARMONIC ANALYSIS IN THE COMPLEX DOMAIN.....	128
33. Relevant Theorems of Generalized Harmonic Analysis.....	128
34. Cauchy's Theorem.....	130
35. Almost Periodic Functions.....	138
CHAPTER IX. RANDOM FUNCTIONS.....	140
36. Random Functions.....	140

37. The Fundamental Random Function.....	146
38. The Continuity Properties of a Random Function.....	157
CHAPTER X. THE HARMONIC ANALYSIS OF RANDOM FUNCTIONS.....	163
39. The Ergodic Theorem.....	163
40. The Theory of Transformations.....	163
41. The Harmonic Analysis of Random Functions.....	170
42. The Zeros of a Random Function in the Complex Plane.....	172
BIBLIOGRAPHY.....	179
INDEX.....	183
