

TABLE OF CONTENTS

Foreword	i
Acknowledgments.	i
Chapter 0. On the Structure of Reductive p-adic Groups.	1
§0.1. Some Definitions and Facts.	2
§0.2. Cartan Subgroups and Split Tori in Reductive Groups.	4
§0.3. Parabolic Subgroups of Reductive Groups.	5
§0.4. On the Rational Points of p-adic Reductive Groups.	7
§0.5. Lie Algebras, Roots, and Weyl Groups.	9
§0.6. A_0 -good Maximal Compact Subgroups of G .	12
Chapter 1. Generalities Concerning Totally Disconnected Groups and Their Representations.	14
§1.1. Functions and Distributions on Totally Disconnected Spaces.	14
§1.2. T.d. Groups and Relatively Invariant Measures on Homogeneous Spaces.	17
§1.2.1. On the Haar Measure for a Parabolic Group.	22
§1.2.2. The Constant $\gamma(G/P)$ for a Reductive p-adic Group.	23
§1.3. Representations of Groups.	25
§1.4. Smooth Representations of t.d. Groups.	28
§1.5. Admissible Representations of t.d. Groups.	35
§1.6. Intertwining Operators and Forms.	38
§1.7. Smooth Induced Representations of t.d. Groups.	41
§1.8. Some Results Concerning Distributions Defined on a t.d. Group.	47
§1.9. Invariant Distributions and Intertwining Forms for Induced Representations.	52
§1.10. Automorphic Forms on a t.d. Group.	57
§1.11. The Space of Finite Operators for an Admissible Module.	63
§1.12. Double Representations of K and Automorphic forms.	69
§1.13. On the Characters of Admissible Representations.	74
Chapter 2. Jacquet's Theory, Bruhat's Theory, the Elementary Theory of the Constant Term.	78
§2.1. A Decomposition Theorem for Certain Compact Open Subgroups of G .	79
§2.2. J-supercuspidal Representations.	81
§2.3. Jacquet's Quotient Theorem.	86
§2.4. Dual Exponents, the Subrepresentation Theorem, and $\mathcal{E}'(G)$.	90
§2.5. Irreducibility and Intertwining Numbers for Certain Induced Representations.	93
§2.6. The Constant Term.	100
§2.7. Elementary Properties of the Constant Term.	106
§2.8. The Constant Term and Supercusp Forms.	112

CONTENTS (cont' d)	Page
Chapter 3. Exponents and the Maass-Selberg Relations.	116
§3.1. Exponents.	116
§3.2. Dual Exponents and Class Exponents.	120
§3.3. On Exponents and Induced Representations.	125
§3.4. Simple Classes and Negligibility.	130
§3.5. The Maass-Selberg Relations.	139
Chapter 4. The Schwartz Spaces.	147
§4.1. Some Preliminaries.	148
§4.2. The Spherical Function Ξ .	152
§4.3. Inequalities.	158
§4.4. The Schwartz Spaces and Square Integrable Forms.	174
§4.5. Tempered Representations and the Weak Constant Term.	182
§4.6. The General Maass-Selberg Relations.	194
§4.7. The Steinberg Character of G and an Application.	196
§4.8. Howe's Theorem and Consequences.	211
Chapter 5. The Eisenstein Integral and Applications.	221
§5.1. On the Matrix Coefficients of Admissible Representations and Their Constant Terms.	222
§5.2. The Eisenstein Integral and Its Functional Equations: The Formal Theory.	230
§5.2.1. Preliminaries: The Context.	230
§5.2.2. Definition and Elementary Properties of the Eisenstein Integral.	240
§5.2.3. Eisenstein Integrals as Matrices for Induced Representations.	247
§5.2.4. Functional Equations for the Eisenstein Integral.	249
§5.3. The Eisenstein Integral and Its Functional Equations: The Analytic Theory.	263
§5.3.1. The Complex Structure on $\mathcal{E}_{\mathbb{C}}(M)$.	263
§5.3.2. On the Simplicity of Exponents I.	268
§5.3.3. On the Simplicity of Exponents II.	272
§5.3.4. An Integral Formula for $E_{P,1}(P : \psi : \nu)$.	278
§5.3.5. Analytic Functional Equations for the Eisenstein Integral.	281
§5.4. Applications and Further Development of the Analytic Theory.	287
§5.4.1. Some Ideas of Casselman.	287
§5.4.2. Some Results for the Case p -rank Equal One.	292
§5.4.3. The Product Formula and Consequences.	299
§5.4.4. The Composition Series Theorem.	307
§5.4.5. On the Existence and Finiteness of the Set of Special Representations Associated to a Complex Orbit.	311
§5.5. Wave Packets, the Plancherel Measure, and Intertwining Operators.	318

CONTENTS (cont' d)	<u>Page</u>
§5.5.1. The Algebras of Wave Packets.	318
§5.5.2. The Plancherel Formula.	342
§5.5.3. The Commuting Algebra Theorem.	344
§5.5.4. An Almost Explicit Plancherel's Formula for G of Semi-Simple Rank One.	351
References.	362
Selected Terminology.	365
Selected Notations.	370
