

TABLE OF CONTENTS

DEDICATION	v
PREFACE	vii
CHAPTER 1 : POINTWISE CONVERGENCE OF A SEQUENCE OF OPERATORS	1
1.1. Finiteness a.e. and continuity in measure of the maximal operator	8
1.2. Continuity in measure at $0 \in X$ of the maximal operator and a.e. convergence	11
CHAPTER 2 : FINITENESS A.E. AND THE TYPE OF THE MAXIMAL OPERATOR	13
2.1. A result of A.P. Calderón on the partial sums of the Fourier series of $f \in L^2(T)$	14
2.2. Commutativity of T^* with mixing transformations. Positive operators. The theorem of Sawyer	19
2.3. Commutativity of T^* with mixing transformations. The theorem of Stein	23
2.4. The theorem of Nikishin	29
CHAPTER 3 : GENERAL TECHNIQUES FOR THE STUDY OF THE MAXIMAL OPERATOR	35
3.1. Reduction to a dense subspace	35
3.2. Covering and decomposition	39
3.3. Kolmogorov condition and the weak type of an operator	50
3.4. Interpolation	54
3.5. Extrapolation	60
3.6. Majorization	63
3.7. Linearization	66
3.8. Summation	68
CHAPTER 4 : ESPECIAL TECHNIQUES FOR CONVOLUTION OPERATORS	73
4.1. The type $(1,1)$ of maximal convolution operators	74
4.2. The type (p,p) , $p > 1$, of maximal convolution operators	88

CHAPTER 5 : ESPECIAL TECHNIQUES FOR THE TYPE (2,2)	91
5.1. Fourier transform	91
5.2. Cotlar's lemma	92
5.3. The method of rotation	96
CHAPTER 6 : COVERINGS, THE HARDY-LITTLEWOOD MAXIMAL OPERATOR AND DIFFERENTIATION. SOME GENERAL THEOREMS.	103
6.1. Some notation	104
6.2. Covering lemmas imply weak type properties of the maximal operator and differentiation	105
6.3. From the maximal operator to covering properties	114
6.4. Differentiation and the maximal operator	118
6.5. Differentiation properties imply covering properties	136
6.6. The halo problem	149
CHAPTER 7 : THE BASIS OF INTERVALS	159
7.1. The interval basis \mathcal{B}_2 does not have the Vitali property. It does not differentiate L^1	160
7.2. Differentiation properties of \mathcal{B}_2 . Weak type inequality for a basis which is the Cartesian product of another two	160
7.3. The halo function of \mathcal{B}_2 . Saks rarity theorem	165
7.4. A theorem of Besicovitch on the possible values of the upper and lower derivatives with respect to \mathcal{B}_2	171
7.5. A theorem of Marstrand and some generalizations	177
7.6. A problem of Zygmund solved by Moriyón	182
7.7. Covering properties of the basis of intervals. A theorem of Córdoba and R. Fefferman	184
7.8. Another problem of Zygmund. Solution by Córdoba	193
CHAPTER 8 : THE BASIS OF RECTANGLES	199
8.1. The Perron tree	201
8.2. A lemma of Fefferman	207
8.3. The Kakeya problem	209
8.4. The Besicovitch set	210
8.5. The Nikodym set	215
8.6. Differentiation properties of some bases of rectangles	224
8.7. Some results concerning bases of rectangles in lacunary directions	233

CHAPTER 9 : THE GEOMETRY OF LINEARLY MEASURABLE SETS	241
9.1. Linearly measurable sets	242
9.2. Density. Regular and irregular sets	245
9.3. Tangency properties	252
9.4. Projection properties	258
9.5. Sets of polar lines	268
9.6. Some applications	276
CHAPTER 10: APPROXIMATIONS OF THE IDENTITY	281
10.1. Radial kernels	282
10.2. Kernels non-increasing along rays	286
10.3. A theorem of F. Zo	292
10.4. Some necessary conditions on the kernel to define a good approximation of the identity	296
CHAPTER 11: SINGULAR INTEGRAL OPERATORS	305
11.1. The Hilbert transform	306
11.2. The Calderón-Zygmund operators	313
11.3. Singular integral operators with generalized homogeneity	327
CHAPTER 12: DIFFERENTIATION ALONG CURVES. A RESULT OF STEIN AND WAINGER	337
12.1. The strong type $(2,2)$ for a homogeneous curve	338
12.2. The type (p,p) $1 < p < \infty$ of the maximal operator	348
12.3. An application. Differentiation by rectangles determined by a field of directions	350
CHAPTER 13: MULTIPLIERS AND THE HARDY-LITTLEWOOD MAXIMAL OPERATOR	359
13.1. The characteristic function of the unit disk. A theorem of C. Fefferman	362
13.2. Polygons with infinitely many sides.	368
13.3. The maximal operator with respect to a collection of rectangles. A theorem of A. Córdoba and R. Fefferman	371
