

CONTENTS

Preface

ix

1. Bases in Banach Spaces

1	Schauder Bases	1
2	Schauder's Basis for $C[a,b]$	3
3	Orthonormal Bases in Hilbert Space	6
4	The Reproducing Kernel	15
5	Complete Sequences	19
6	The Coefficient Functionals	22
7	Duality	27
8	Reisz Bases	30
9	The Stability of Bases in Banach Spaces	37
10	The Stability of Orthonormal Bases in Hilbert Space	41

2. Entire Functions of Exponential Type

Part One. The Classical Factorization Theorems

1	Weierstrass's Factorization Theorem	54
2	Jensen's Formula	59
3	Functions of Finite Order	62
4	Estimates for Canonical Products	69
5	Hadamard's Factorization Theorem	74

Part Two. Restrictions along a Line

1	The "Phragmén-Lindelöf" Method	80
---	--------------------------------	----

2	Carleman's Formula	87
3	Integrability on a Line	93
4	The Paley–Wiener Theorem	100
5	The Paley–Wiener Space	105

3. The Completeness of Sets of Complex Exponentials

1	The Trigonometric System	112
2	Exponentials Close to the Trigonometric System	118
3	A Counterexample	122
4	Some Intrinsic Properties of Sets of Complex Exponentials	126
5	Stability	131
6	Density and the Completeness Radius	137

4. Interpolation and Bases in Hilbert Space

1	Moment Sequences in Hilbert Space	146
2	Bessel Sequences and Riesz–Fischer Sequences	153
3	Applications to Systems of Complex Exponentials	162
4	The Moment Space and Its Relation to Equivalent Sequences	167
5	Interpolation in the Paley–Wiener Space: Functions of Sine Type	170
6	Interpolation in the Paley–Wiener Space: Stability	179
7	The Theory of Frames	184
8	The Stability of Nonharmonic Fourier Series	190
9	Pointwise Convergence	197

Notes and Comments	203
