<b>PREFACE</b>	<b>v</b>
<b>CHAPTER 1. DEFINITIONS, NOTATIONS, AND CONCEPTS OF REPRESENTATION THEORY</b>	<b>1</b>
1-1 Basic Properties of the Poincaré Group	1
1-2 Functions on Groups	11
1-3 Unitary Representations	16
1-4 Induced Representations	22
<b>CHAPTER 2. UNITARY REPRESENTATIONS OF THE INHOMOGENEOUS <math>SL(2, C)</math> GROUP</b>	<b>30</b>
2-1 Orbits	30
2-2 Little Groups	34
2-3 Boosts for Timelike Orbits	36
2-4 Boosts for Other Orbits	39
2-5 Spinors	41
2-6 Classical Spinor Fields	46
2-7 Remarks	49
<b>CHAPTER 3. REPRESENTATIONS OF THE GROUP <math>SL(2, C)</math></b>	<b>51</b>
3-1 Linear Spaces of Homogeneous Functions	52
3-2 The Group Operations	53
3-3 The Canonical Basis	57
3-4 The Operator Norm of the Group Elements	61
3-5 An Integral Representation for the Matrix Elements of the Group Elements in the Canonical Basis	63
3-6 Invariant Bilinear Functionals	65
3-7 Scalar Products	72
3-8 Equivalence and Irreducibility	75
3-9 Generators and the Matrix Form of the Intertwining Operators in the Canonical Basis	80

3-10 Covariant Operators	85
3-11 Remarks	90

#### CHAPTER 4. HARMONIC ANALYSIS OF POLYNOMIALLY BOUNDED FUNCTIONS ON THE GROUP $SL(2, C)$ 93

4-1 Fourier Transforms and Representations of the Group Algebra	94
4-2 The Inverse Fourier Transformation	101
4-3 The Decomposition of the Regular Representation	104
4-4 Generalized Functions on the Group $SL(2, C)$	107
4-5 The Representation Functions of the Second Kind	110
4-6 Elementary Examples of Distributions	118
4-7 $SU(2)$ Bicovariant Distributions	127
4-8 Remarks	133

#### CHAPTER 5. REPRESENTATIONS OF THE GROUP $SL(2, R)$ 135

5-1 Elementary Properties of the Group $SL(2, R)$	136
5-2 Linear Spaces of Homogeneous Functions	139
5-3 The Canonical Basis and the Canonical Norm	142
5-4 Generators and Their Diagonalizations	146
5-5 Bilinear Invariant Functionals	152
5-6 Invariant Subspaces	157
5-7 Unitary Representations	163
5-8 Representations of the Discrete Series as Induced Representations	167
5-9 Equivalence and Irreducibility	172
5-10 Matrix Elements of the Group Operators in the Discrete Series	177
5-11 Remarks	178

#### CHAPTER 6. HARMONIC ANALYSIS OF POLYNOMIALLY BOUNDED FUNCTIONS ON THE GROUP $SL(2, R)$ 179

6-1 Representations of the Group Algebra of $SL(2, R)$ and the Fourier Transform in the Principal Series	180
6-2 Fourier Transforms in the Discrete Series	184
6-3 The Plancherel Theorem	191
6-4 Representation Functions of the First and Second Kind	200
6-5 Fourier Transformations of Bicovariant Functions	206
6-6 Generalized Functions on the Group $SL(2, R)$	213
6-7 Remarks	219

<b>CHAPTER 7. HARMONIC ANALYSIS OF REPRESENTATIONS OF THE GROUP <math>SL(2, C)</math> ON THE SUBGROUP <math>SU(1, 1)</math></b>	<b>221</b>
7-1 A New Realization of the Spaces of Homogeneous Functions	222
7-2 The Decomposition of the Principal Series of $SL(2, C)$	226
7-3 The Transition from the Canonical Basis to the Pseudobasis	228
7-4 The Decomposition of a General Representation of $SL(2, C)$ on the subgroup $SU(1, 1)$ by means of Contour Integrals	234
7-5 The Decomposition of a General Representation of $SL(2, C)$ on the Subgroup $SU(1, 1)$ by means of Series Expansions	237
7-6 Remarks	245
<b>CHAPTER 8. REGGE AND TOLLER POLES</b>	<b>247</b>
8-1 The Scattering Amplitude	248
8-2 The <i>CPT</i> Transformation	251
8-3 Unitary Representations of $F_+ \times T_4$ for the Spacelike and Null Orbits	256
8-4 The Reduction of Tensor Product Representations of $F_+ \times T_4$	259
8-5 Schur's Lemma	263
8-6 Spaces of Test Functions	269
8-7 Regge Poles	273
8-8 Toller Poles	276
8-9 Remarks	281
<b>A. APPENDIX</b>	<b>282</b>
A-1 Jacobians for the Group $SL(2, C)$	282
A-2 Jacobians for the Group $SL(2, R)$	285
A-3 Jacobians for Inhomogeneous Groups	289
