TABLE OF CONTENTS

CHAPTER 1 CONFLICT BETWEEN DISCONTINUITY, MUTLIPLICATION AND DIFFERENTIATION 1

§1 A basic conflict 1

§2 A few remarks 5

§3 An algebra setting for generalized functions 10

§4 Limits to compatibility 12

§5 Construction of algebras containing the distributions 21

§6 The Neutrix condition 25

§7 Representation versus interpretation 28

§8 Nonlinear stability paradoxes, or how to prove that $0^2 = 1$ in $\mathbb{R}$ 30

§9 Extending nonlinear partial differential operators to generalized functions 43

§10 Notions of generalized solution 47

§11 Nonlinear stability, generality and exactness 50

§12 Algebraic solution to the nonlinear stability paradoxes ... 55

§13 General nonlinear partial differential equations 56

§14 Systems of nonlinear partial differential equations 58

Appendix 1 On Heaviside functions and their derivatives 62

Appendix 2 The Cauchy-Bolzano quotient algebra construction of the real numbers 65

Appendix 3 How 'wild' should we allow the worst generalized functions to be? 69

Appendix 4 Neutrix calculus and negligible sequences of functions 75

Appendix 5 Review of certain important representations and interpretations connected with partial differential equations 79

Appendix 6 Details on nonlinear stability paradoxes, and on the existence and uniqueness of solutions for nonlinear partial differential equations 88

Appendix 7 The deficiency of distribution theory from the point of view of exactness 94

Appendix 8 Inexistence of largest off diagonal vector subspaces or ideals 98

CHAPTER 2 GLOBAL VERSION OF THE CAUCHY KOVALEVSKAIA THEOREM ON ANALYTIC NONLINEAR PARTIAL DIFFERENTIAL EQUATIONS 101

§1 Introduction 101

§2 The nowhere dense ideals 104

§3 Nonlinear partial differential operators on spaces of generalized functions 108

§4 Basic Lemma 109

§5 Global generalized solutions 113

§6 Closed nowhere dense singularities with zero Lebesque measure 117

§7 Strange phenomena in partial differential equations 122

§7.1 Too many equations and solutions?! 122
§7.2 Universal ordinary differential equations 123
§7.3 Universal partial differential equations 124
§7.4 Final Remark 124

Appendix 1 On the structure of the nowhere dense ideals 126

CHAPTER 3 ALGEBRAIC CHARACTERIZATION FOR THE SOLVABILITY OF NONLINEAR PARTIAL DIFFERENTIAL EQUATIONS 131

§1 Introduction 131

§2 The notion of generalized solution 132

§3 The problem of solvability of nonlinear partial differential equations 135

§4 Neutrix characterization for the solvability of nonlinear partial differential equations 136

§5 The neutrix condition as a densely vanishing condition on ideals 152

§6 Dense vanishing in the case of smooth ideals 159

§7 The case of normal ideals 164

§8 Conclusions 165

Appendix 1 On the sharpness of Lemma 1 in Section 4 168

Appendix 2 Sheaves of sections 170

CHAPTER 4 GENERALIZED SOLUTIONS OF SEMILINEAR WAVE EQUATIONS WITH ROUGH INITIAL VALUES 173

§1 Introduction 173

§2 The general existence and uniqueness result 174

§3 Coherence with $\mathcal{L}^1_{loc}$ solutions 183

§4 The delta wave space 185

§5 A few remarks 194

CHAPTER 5 DISCONTINUOUS, SHOCK, WEAK AND GENERALIZED SOLUTIONS OF BASIC NONLINEAR PARTIAL DIFFERENTIAL EQUATIONS .. 197

§1 The need for nonclassical solutions: the example of the nonlinear shock wave equations 197

§2 Integral versus partial differential equations 202

§3 Concepts of generalized solutions 208

§4 Why use distributions? 209

§5 The Lewy inexistence result 212

Appendix 1 Multiplication, localization and regularization of distributions 215

CHAPTER 6 CHAINS OF ALGEBRAS OF GENERALIZED FUNCTIONS 221

§1 Restrictions on embeddings of the distributions into quotient algebras 221

§2 Regularizations 227

§3 Neutrix characterization of regular ideals 234

§4 The utility of chains of algebras of generalized functions .. 244

§5 Nonlinear partial differential operators in chains of algebras 260

§6 Limitations on the embedding of smooth functions into chains of algebras 261

CHAPTER 7 RESOLUTION OF SINGULARITIES OF WEAK SOLUTIONS FOR POLYNOMIAL NONLINEAR PARTIAL DIFFERENTIAL EQUATIONS 271

§1 Introduction 271

§2 Simple polynomial nonlinear PDEs and resolution of singularities 272

§3 Resolution of singularities of nonlinear shock waves 275

§4 Resolution of singularities of the Klein-Gordon type nonlinear waves 276

§5 Junction conditions and resolution of singularities of weak solutions for the equations of magnetohydrodynamics and general relativity 278

§6 Resoluble systems of polynomial nonlinear partial differential equations 287

§7 Computation of the junction conditions 290

§8 Examples of resoluble systems of polynomial nonlinear partial differential equations 292

§9 Global version of the Cauchy-Kovalevskaia theorem in chains of algebras of generalized functions 294

CHAPTER 8 THE PARTICULAR CASE OF COLOMBEAU'S ALGEBRAS 301

§1 Smooth approximations and representations 301

§2 Properties of the differential algebra $\mathcal{G}(\mathbb{R}^n)$ 307

§3 Colombeau's algebra $\mathcal{G}(\mathbb{R}^n)$ as a collapsed case of chains of algebras 312

§4 Integrals of generalized functions 319

§5 Coupled calculus in $\mathcal{G}(\mathbb{R}^n)$ 325

§6 Generalized solutions of nonlinear wave equations in quantum field interaction 333

§7 Generalized solutions for linear partial differential equations 335

Appendix 1 The natural character of Colombeau's differential algebra 345

Appendix 2 Asymptotics without a topology 354

Appendix 3 Connections with previous attempts in distribution multiplication 357

Appendix 4 An intuitive illustration of the structure of Colombeau's algebras 361

Final Remarks 367
