| PREFACE | v |
| TERMINOLOGY AND BASIC THEOREMS | ix |
| CHAPTER 1. <i>Some Preliminary Topics</i> | 1 |
| 1. Equicontinuous Families of Functions | 1 |
| 2. The Weierstrass Approximation Theorem | 4 |
| 3. The Fourier Integral | 9 |
| 4. The Laplace Transform | 13 |
| 5. Ordinary Differential Equations | 17 |
| 6. Lebesgue Integration | 25 |
| 7. Dini's Theorem | 27 |
| CHAPTER 2. <i>Partial Differential Equations of First Order</i> | 28 |
| 1. Linear Equations in Two Independent Variables | 28 |
| 2. Quasi-linear Equations | 33 |
| 3. The General First-order Equation | 36 |
| CHAPTER 3. <i>The Cauchy Problem</i> | 42 |
| 1. Classification of Equations with Linear Principal Parts | 42 |
| 2. Characteristics | 44 |
| 3. Canonical Forms | 46 |
| 4. The Cauchy Problem for Hyperbolic Equations | 48 |
| 5. The One-dimensional Wave Equation | 53 |
| 6. The Riemann Function | 55 |
| 7. Classification of Second-order Equations in Three or More Independent Variables | 58 |
| 8. The Wave Equation in Two and Three Dimensions | 60 |
| 9. The Legendre Transformation | 65 |
| CHAPTER 4. <i>The Fredholm Alternative in Banach Spaces</i> | 69 |
| 1. Linear Spaces | 69 |
| 2. Normed Linear Spaces | 71 |
| 3. Banach Spaces | 74 |
| 4. Linear Functionals and Linear Operators | 76 |
| 5. The Fredholm Alternative | 82 |

| | |
|---|-----|
| CHAPTER 5. <i>The Fredholm Alternative in Hilbert Spaces</i> | 90 |
| 1. Inner-product Spaces | 90 |
| 2. Hilbert Spaces | 95 |
| 3. Projections, Linear Functionals, Adjoint Operators | 99 |
| 4. Hermitian and Completely Continuous Operators | 104 |
| 5. The Fredholm Alternative | 111 |
| 6. Integral Equations | 118 |
| 7. Hermitian Kernels | 121 |
| 8. Illustrative Example | 127 |
| CHAPTER 6. <i>Elements of Potential Theory</i> | 130 |
| 1. Introduction | 130 |
| 2. Laplace's Equation and Theory of Analytic Functions | 131 |
| 3. Fundamental Solutions | 133 |
| 4. The Mean-value Theorem | 135 |
| 5. The Maximum Principle | 136 |
| 6. Formulation of the Dirichlet Problem | 138 |
| 7. Solution of the Dirichlet Problem for the Disc | 139 |
| 8. The Converse of the Mean-value Theorem | 146 |
| 9. Convergence Theorems | 149 |
| 10. Strengthened Form of the Maximum Principle | 152 |
| 11. Single and Double Layers | 152 |
| 12. Poisson's Equation | 157 |
| CHAPTER 7. <i>The Dirichlet Problem</i> | 167 |
| 1. Subharmonic Functions | 167 |
| 2. The Method of Balayage | 170 |
| 3. The Perron-Remak Method | 176 |
| 4. The Method of Integral Equations | 179 |
| 5. The Dirichlet Principle | 183 |
| 6. The Method of Finite Differences | 199 |
| 7. Conformal Mapping | 211 |
| CHAPTER 8. <i>The Heat Equation</i> | 217 |
| 1. The Initial-value Problem for the Infinite Rod | 217 |
| 2. The Simplest Problem for the Semi-infinite Rod | 221 |
| 3. The Finite Rod | 226 |
| CHAPTER 9. <i>Green's Functions and Separation of Variables</i> | 232 |
| 1. The Vibrating String | 232 |
| 2. The Green's Function of the Operator $\frac{d^2}{dx^2}$ | 235 |
| 3. The Green's Function of a Second-order Differential Operator | 237 |
| 4. Eigenfunction Expansions | 239 |
| 5. A Generalized Wave Equation | 241 |
| 6. Extension of the Definition of Green's Functions | 243 |
| SOLUTIONS TO SELECTED EXERCISES | 253 |
| SUGGESTIONS FOR FURTHER STUDY | 267 |
| INDEX | 269 |
