

TABLE OF CONTENTS

FOREWORD	xiii
<i>Chapter 1</i> : Distributions and operators	1
1. Spaces of distributions	1
2. Convolution and Fourier transformation of distributions	13
3. Singular spectrum of a distribution	21
4. Operators and kernels	23
5. Operators and support properties	30
6. Differential operators with constant coefficients	33
7. Operators and distributions on a manifold	44
8. Operators and kernel distributions on a manifold	59
9. Regular open subsets of \mathbb{R}^n and manifolds with boundary	62
10. Additional notes and exercises	71
10.1 Paley-Wiener-Schwartz theorem	71
10.2 Homogeneous distributions	72
10.3 Fourier transform of $e^{i\lambda x^2/2}$	73
10.4 Fundamental solution of the Cauchy-Riemann operator	74
10.5 Fundamental solution of the Laplace operator	74
10.6 Fundamental solution of the heat operator	76

10.7	Fundamental solution of the Schrödinger operator	77
10.8	Fundamental solution of the wave operator	78
10.9	Inverse image of a distribution	80

Chapter 2: Sobolev spaces and applications 83

1.	Dirichlet's principle	83
2.	The spaces $H^s(\mathbb{R}^n)$ and $H_{loc}^s(X)$	85
3.	The spaces $H^s(\bar{X})$ and $H_{loc}^s(\bar{X})$	104
4.	Trace theorems, spaces $H_0^s(X)$	112
5.	Application to the Dirichlet problem	122
6.	Sobolev spaces and regularisation	126
7.	Additional notes and exercises	131
7.1	Poincaré's inequality	131
7.2	Invariance of H^s under diffeomorphism ...	132
7.3	Strict inclusions	133
7.4	Lax-Milgram theorem	133
7.5	Hörmander's inequalities	134
7.6	Local solvability for differential operators of principal type with real principal symbol	135

Chapter 3: Symbols, oscillatory integrals and stationary-phase theorems 139

1.	Introduction	139
2.	Symbols	140
3.	Elliptic symbols	149
4.	Asymptotic expansions of symbols	152

5.	Topology on the symbol spaces	155
6.	Various generalisations	157
7.	Oscillatory integrals	159
8.	Integral operators associated with a phase and an amplitude	167
9.	Stationary-phase theorem	171
10.	Additional notes and exercises	182
10.1	Symbols with uniform upper bounds with respect to x in \mathbb{R}^n	182
10.2	Oscillatory integrals and decomposition into plane waves	183
10.3	Lacunae of the fundamental solution of the wave operator	184
10.4	Fundamental solution of the wave operator for space dimension equal to 1, 2 or 3	187
10.5	Stationary-phase theorem for a surface integral	188
 <i>Chapter 4 : Pseudo differential operators</i>		 191
1.	Definition	191
2.	A characterisation of p.d.o.'s	196
3.	Symbol of a p.d.o.	205
4.	Algebra and symbolic calculus of p.d.o.'s	207
5.	P.d.o.'s on manifolds	211
6.	Symbolic calculus of p.d.o.'s on a manifold ...	216
7.	Elliptic p.d.o.'s	221
8.	P.d.o.'s and Sobolev spaces	227
9.	Elliptic complexes and Hodge's theorem	243
10.	Friedrich's lemma and generalisations	250

11.	Additional notes and exercises	256
11.1	P.d.o.'s with uniform symbols	256
11.2	P.d.o.'s with uniform symbols and dependent on one parameter	261
11.3	Second proof of the estimate (7.6.1) of Chapter 2	264
11.4	Convolution with certain homogeneous distributions	264
11.5	Endomorphisms of complexes and traces ..	264
11.6	Cotlar-Knapp-Stein lemma	266
11.7	Calderón-Vaillancourt theorem	267

Chapter 5 : Elliptic boundary-value problems 271

1.	Introduction	271
2.	Regularity of the potential at the boundary ...	275
3.	The Calderón projector	290
4.	Application to elliptic boundary-value problems	295
5.	Examples	302
6.	Additional notes and exercises	307
6.1	Example of a p.d.o. which does not satisfy the regularity property of Theorem 2.5	307
6.2	Cauchy's formula and the Hilbert operator	308
6.3	Weakening of assumption (2.1)	310
6.4	Local regularity in the neighbourhood of a point of $\partial\Omega$	310
6.5	Global regularity	310
6.6	Converse of the regularity theorem	311
6.7	Case of systems which are elliptic in the sense of Douglis-Nirenberg	312
6.8	The oblique derivative problem	316

6.9	Elliptic boundary-value problems with interfaces	320
<i>Chapter 6 : Evolution equations</i>		325
1.	The Cauchy-Kovaleski and Holmgren theorems	325
2.	Necessary condition for the Cauchy problem to be well posed	337
3.	Hyperbolic operators with constant coefficients	344
4.	Hyperbolic Cauchy problems with variable coefficients	359
5.	Parabolic Cauchy problems	378
6.	Semigroups of operators and applications	384
7.	Additional notes and exercises	402
7.1	Counter-example to the property of finite propagation speed in the non-differential case	402
7.2	Generator of a strongly continuous group	402
7.3	Further discussion of Theorem 6.9	403
7.4	Energy inequality for the wave equation .	404
7.5	Wave equation with Neumann boundary conditions	405
7.6	Equations of the Schrödinger type	407
<i>Chapter 7 : Mixed hyperbolic problems</i>		409
1.	Introduction	409
2.	Operators and spaces used	411
3.	The uniform Lopatinski condition	421
4.	Energy inequalities	440
5.	Construction of the symmetriser	448

6.	Solution of the problem without initial conditions	460
7.	Solution of the mixed problem	478
8.	Finite propagation speed	483
9.	Additional notes and exercises	491
9.1	Spaces $e^{\gamma t} H_Y^s$	491
9.2	Energy inequality in the scalar case	493
9.3	Algebraic preliminary to Exercise 9.4 ...	494
9.4	Positive symmetric systems	495
9.5	Example of a boundary-value problem for a first-order differential system satisfying the uniform Lopatinski condition	499

Chapter 8 : Microlocalisation

1.	General properties of the singular spectrum (WF)	501
2.	The fundamental theorems	508
3.	The case of manifolds	523
4.	The case of pseudo-differential operators	534
5.	Additional notes and exercises	539
5.1	Conclusion of the calculation of $WF(\delta(x') \otimes Y(x'_n))$	539
5.2	Conclusion of the calculation of $WF'(v(x-y))$ for $v \in \mathcal{D}'(\mathbb{R}^n)$	540
5.3	Construction of a distribution whose singular spectrum is a direction in $T^*(X) \setminus \{0\}$	540
5.4	Intrinsic characterisation of the singular spectrum	541
5.5	Trace calculations	543
5.6	The Lefschetz-Atiyah-Bott formula	545
