

CONTENTS

	Foreword	v
1.	Green's Formula and Analytic Continuation By S. Bochner	1
2.	Strongly Elliptic Systems of Differential Equations By F. E. Browder	15
3.	Derivatives of Solutions of Linear Elliptic Partial Differential Equations By F. John	53
4.	On Multivalued Solutions of Linear Partial Differential Equations By S. Bergman	63
5.	Function-Theoretical Properties of Solutions of Partial Differential Equations of Elliptic Type By L. Bers	69
6.	On a Generalization of Quasi-Conformal Mappings and its Application to Elliptic Partial Differential Equations By L. Nirenberg	95
7.	Second Order Elliptic Systems of Differential Equations By C. B. Morrey	101
8.	Conservation Laws of Certain Systems of Partial Differential Equations and Associated Mappings By. C. Loewner	161
9.	Parabolic Equations By P. D. Lax and A. N. Milgram	167
10.	Linear Equations of Parabolic Type with Constant Coefficients By. P. C. Rosenbloom	191
11.	On Linear Hyperbolic Differential Equations with Variable Coefficients on a Vector Space By. J. Leray	201
12.	The Initial Value Problem for Non-Linear Hyperbolic Equations in Two Independent Variables By P. D. Lax	211
13.	A Geometric Treatment of Linear Hyperbolic Equations of Second Order By A. Douglis	231
14.	On Cauchy's Problem and Fundamental Solutions By J. B. Diaz	235
15.	A Boundary Value Problem for the Wave Equation and Mean Value Theorems By M. H. Protter	249
