Preface to second edition xi
Preface to first edition xiii

## 1 Fundamentals

1-0 Introduction 1
1-1 Classification of physical problems 3
1-2 Classification of equations 5
1-3 Asymptotics 10
1-4 Discrete methods 14
1-5 Finite differences and computational molecules 15
1-6 Finite difference operators 19
1-7 Errors 23
1-8 Stability and convergence 28
1-9 Irregular boundaries 30
1-10 Choice of discrete network 33
1-11 Dimensionless forms 34
References 39

## 2 Parabolic equations

2-0 Introduction 41
2-1 Simple explicit methods 42
2-2 Fourier stability method 47
2-3 Implicit methods 49
2-4 An unconditionally unstable difference equation 55
2-5 Matrix stability analysis 56
2-6 Extension of matrix stability analysis 59
2-7 Consistency, stability, and convergence 61
2-8 Pure initial value problems 62
2-9 Variable coefficients 64
2-10 Examples of equations with variable coefficients 68
2-11 General concepts of error reduction 70
2-12 Explicit methods for nonlinear problems 73
2-13 An application of the explicit method 77
2-14 Implicit methods for nonlinear problems 82
2-15 Concluding remarks 89
References 90

## 3 Elliptic equations

3-0 Introduction 92
3-1 Simple finite difference schemes 94

3-2 Iterative methods 98
3-3 Linear elliptic equations 100
3-4 Some point iterative methods 103
3-5 Convergence of point iterative methods 107
3-6 Rates of convergence 114
3-7 Accelerations—successive over-relaxation (SOR) 119
3-8 Extensions of SOR 125
3-9 Qualitative examples of over-relaxation 130
3-10 Other point iterative methods 135
3-11 Block iterative methods 144
3-12 Alternating direction methods 148
3-13 Summary of ADI results 152
3-14 Some nonlinear examples 158
References 161

**4 Hyperbolic equations**

4-0 Introduction 165
4-1 The quasilinear system 170
4-2 Introductory examples 176
4-3 Method of characteristics 180
4-4 Constant states and simple waves 185
4-5 Typical application of characteristics 186
4-6 Explicit finite difference methods 193
4-7 Overstability 197
4-8 Implicit methods for second-order equations 199
4-9 Nonlinear examples 201
4-10 Simultaneous first-order equations—explicit methods 203
4-11 An implicit method for first-order equations 209
4-12 Hybrid methods for first-order equations 209
4-13 Gas dynamics in one-space variable 212
4-14 Eulerian difference equations 214
4-15 Lagrangian difference equations 219
4-16 Hopscotch methods for conservation laws 221
4-17 Explicit–implicit schemes for conservation laws 224
References 227

**5 Special topics**

5-0 Introduction 230
5-1 Singularities 230
5-2 Shocks 238
5-3 Eigenvalue problems 244
5-4 Parabolic equations in several space variables 251
5-5 Additional comments on elliptic equations 255
5-6 Hyperbolic equations in higher dimensions 262
5-7 Mixed systems 270
5-8 Higher-order equations in elasticity and vibrations 274
5-9 Fluid mechanics: the Navier–Stokes equations 281
5-10 Introduction to Monte Carlo methods 299
5-11 Method of lines 302

5-12 Fast Fourier transform and applications 304
5-13 Method of fractional steps 307
References 311

**6 Weighted residuals and finite elements**

6-0 Introduction 320
6-1 Weighted residual methods (WRM) 320
6-2 Orthogonal collocation 325
6-3 Bubnov–Galerkin (B-G) method 329
6-4 Remarks on completeness, convergence, and errors bounds 333
6-5 Nagumo's lemma and application 339
6-6 Introduction to finite elements 342
References 348
