Foreword v

Preface vii

Introduction: Libration Points and Station Keeping 1

0.1 The Neighborhood of Libration Points as a Useful Place for Spacecrafts 1

0.1.1 The Libration Points in the Restricted Three-body Problem . . . 1

0.1.2 The Libration Points in Perturbations of the Restricted Three-body Problem . . . 2

0.1.3 Possible Missions Around the Libration Points . . . 2

0.1.4 The Real Nominal Quasi-periodic Orbit . . . 3

0.2 Station Keeping of Libration Point Orbits . . . 4

0.2.1 Unstable Nominal Orbits . . . 4

0.2.2 Requirements for an On/off Control . . . 5

Chapter 1 Bibliographical Survey 7

1.1 Numerical Results for Three-dimensional Periodic Orbits Around L_1, L_2 and L_3 . . . 7

1.1.1 References . . . 7

1.1.2 Equations. General Properties . . . 8

1.1.3 Linear Theory Around the Equilibrium Points . . . 9

1.1.4 Description of the Results . . . 11

1.2 Analytic Results for Halo Orbits Associated to L_1, L_2 and L_3 . . . 24

1.2.1 References . . . 24

1.2.2 Equations of Motion . . . 25

1.2.3 Construction of Halo Periodic Solutions . . . 34

1.3 Motion Near L_4 and L_5 . . . 36

1.3.1 References . . . 36

1.3.2 The Triangular Equilibrium Points, Location and Stability . . . 37

1.3.3 Numerical Explorations . . . 40

1.3.4 Analytic Results . . . 42

1.4 Station Keeping 45
1.4.1 References 45
1.4.2 The Control of Libration Point Satellites 46
1.4.2.1 Perturbations and Nominal Path Control 47
1.4.2.2 Linear Feedback Control 48
1.4.2.3 Station Keeping 49
1.4.3 Station Keeping for a Translunar Station 49
1.4.3.1 Dynamics 50
1.4.3.2 Linear Control 51
1.4.3.3 Effect of Errors 53
1.4.4 Control of an Unstable Periodic Orbit 53
1.4.5 Station Keeping for the ISEE–C. Algorithm and Results 55
1.4.5.1 Mission Design 55
1.4.5.2 The Algorithm 56
1.4.5.3 A Posteriori Information on the Mission 57
1.4.6 Additional Work 57

Chapter 2 Halo Orbits. Analytic and Numerical Study **59**
2.1 The Restricted Three-body Problem 59
2.1.1 Description of the Problem 59
2.1.2 Values Adopted for the Constants 61
2.2 Analytic Determination of the Families of Halo Orbits for the Restricted Three-body Problem 62
2.2.1 Introduction 62
2.2.2 Analytic Computations 63
2.2.3 Description of the Program for the Computation of the Analytic Halo Orbits 68
2.2.3.1 Storage of the Elements 68
2.2.3.2 The Series M, N and P 72
2.2.3.3 Addition of Series 73
2.2.3.4 Multiplication of Series 73
2.2.3.5 Computation of the Amount of Elements Used in the Program 75
2.2.4 Results of the Analytic Computations 78
2.3 Numerical Determination of the Families of Halo Orbits for the RTBP. Analysis of Bifurcations and Terminations 93
2.3.1 Description of the Program for the Numerical Computation of Symmetric Periodic Orbits for the RTBP 93
2.3.1.1 The Continuation Method 93
2.3.1.2 Refinement 94
2.3.1.3 Implementation 95

2.3.2 Tables of Numerical Values of the Families of Halo Orbits Associated to L_1 and L_2 96
2.3.3 The Halo Families Associated to L_3 115
2.3.4 Interest of These Orbits for Spacecraft Missions 119
2.3.4.1 Small Size Halo Orbits Related to L_1 and L_2 119
2.3.4.2 The Stable Zone of Halo Orbits in the L_1 and L_2 cases 120
2.3.4.3 The L_3 Case 123
2.3.5 Bifurcations 124
2.3.6 Termination of the Families of Halo Orbits. The Hill Problem. The Rotating Two-body Problem 126
2.3.6.1 Introduction 126
2.3.6.2 The KS Transform 127
2.3.6.3 Vertical Periodic Orbits for Hill's Problem. Local Analysis 128
2.3.6.4 Hill's Problem Bifurcations. Perturbations Due to μ . 129
2.3.6.5 Numerical Results 132
2.3.6.6 The Rotating Two-body Problem 137
2.3.7 The Elliptic Restricted Three-body Problem 140
2.4 References 141

Chapter 3 The Neighborhood of the Halo Orbits: Numerical Study and Applications 143
3.1 Numerical Study of the Local Invariant Manifolds 143
3.1.1 The First Order Variational Equations 143
3.1.2 Floquet Theory for Halo Orbits. The Floquet Modes 145
3.1.3 Numerical Computation of the Unstable and Stable Manifolds . 148
3.1.4 Numerical Computation of the Remaining Floquet Modes 149
3.1.5 Results of the Computations. Consequences and Discussion . . . 150
3.2 The Proposed Method for the On/off Control 159
3.2.1 On/off Control Using Invariant Manifolds 159
3.2.2 The Projection Factors 160
3.2.3 A First Approach Towards the Optimal Maneuvers 161
3.2.4 Numerical Computations of Projection Factors and Unitary Controls 163
3.2.5 Discussion of Results: the Different Gains and the No Delay Rule 177
3.2.6 A Second Approach Towards the Optimal Maneuvers 178
3.3 On the Use of Solar Radiation Pressure for Station Keeping 179
3.3.1 Using Radiation Pressure: Applicability and Limitations 179
3.3.2 On the Determination of Optimal Parameters 179
3.3.3 The "Always Towards the Sun" Rule 181
3.4 Globalization of the Invariant Manifolds 184
3.4.1 The Computation of the Global Stable Manifold 184

3.4.2 Results of Interest for the Transfer Orbit 184
3.5 References 188

Chapter 4 Analytic Solution of the Variational Equations. Analytic Computations for Control Parameters 189
4.1 Analytic Solution of the Variational Equations 189
4.1.1 The Analytic Method 189
4.1.2 Description of the Program to Do the Analytic Computations . . 194
4.1.3 Results and Numerical Tests 196
4.1.4 The Resonance Between Modes and the Related Problems of Convergence 197
4.2 Analytic Computations for Control Parameters 204
4.2.1 The General Method to be Used 204
4.2.2 On the Fast Computation of the Involved Parameters 205
4.2.3 Description of the Program to Obtain the Control Parameters . 206
4.2.4 Comparison with Direct Numerical Computations 207
4.3 References 216

Chapter 5 The Equations of Motion for Halo Orbits Under the Effect of Perturbations and Near Triangular Points 217
5.1 Analysis of the Perturbations 217
5.1.1 Description and Justification of the Method. The Problems of Dynamical Coherence 217
5.1.2 Determination of the Magnitudes to be Associated to the Different Weights 218
5.1.3 The Reference Systems and the Related Changes of Coordinates 220
5.1.4 A Program for the Simulation of the Solar System and the Computation of Residual Accelerations 222
5.1.5 The Adopted Model for the Motion Near Halo Orbits in the Cases Under Consideration 226
5.2 Equations of Motion for Perturbed Halo Orbits 237
5.2.1 Introduction 237
5.2.2 The Lagrangian in Ecliptic Coordinates 237
5.2.3 The Collinear Points for the Sun–Barycenter Problem 239
5.2.4 Expressions of the Lagrangian in Different Coordinate Systems . 240
5.2.5 The Lagrange Equations for the Sun–Barycenter Problem, Collinear Points Case 246
5.2.6 The Collinear Points in the Earth–Moon Problem: Several Expressions for the Lagrangian 250
5.2.7 The Lagrange Equations for the Earth–Moon Problem: Collinear Points 253
5.3 Equations of Motion Near the Triangular Points 254
5.3.1 The Triangular Points for the Sun–Barycenter Problem 254

5.3.2 The Lagrangian in Normalized Coordinates with Origin at L_4 or L_5 . . . 255
5.3.3 The Lagrange Equations for the Sun–Barycenter Problem, Triangular Case . . . 256
5.3.4 The Equations in the Earth–Moon Problem . . . 258
5.4 Numerical Tests of the Equations of Motion . . . 259
5.4.1 Description of a Program to Check the Equations of Motion . . . 259
5.4.2 Numerical Results . . . 260
5.5 References . . . 264

Chapter 6 Expansions Required for the Equations of Motion. Collinear Points Case 265
6.1 Analytic Expansion of the Coefficients Due to the Noncircular Motion of the Earth–Moon Barycenter . . . 266
6.1.1 The Coefficients Appearing in the Equations of Motion . . . 266
6.1.2 A Program for the Computation of the Coefficients . . . 267
6.1.3 Numerical Results and Tests . . . 268
6.2 Preliminary Exploration of the Functions to be Kept . . . 276
6.2.1 Expansion of the Perturbing Functions as Sum of Monomials in the Coordinates . . . 276
6.2.2 A Rough Exploration of the Functions to be Kept . . . 277
6.3 Computation of the Approximate Frequencies and Magnitudes of the Perturbations Using FFT . . . 278
6.3.1 The Functions to be Analyzed . . . 278
6.3.2 The Filtering Procedure for the Output of FFT . . . 279
6.3.3 Numerical Results . . . 279
6.3.4 The Identification of the Frequencies . . . 280
6.4 The Final Computation of the Perturbing Terms . . . 290
6.4.1 Determination of the Coefficients . . . 290
6.4.2 Conversion to a Suitable Form for the Equations of the Quasi-periodic Orbit. Numerical Results . . . 290
6.5 References . . . 304

Chapter 7 The Quasi-periodic Orbits: Equations, Method of Solution and Results 305
7.1 The Final Equations of Motion for the Collinear Case . . . 305
7.1.1 Expansion of the Equations of Motion in a Suitable Form for the Integration . . . 305
7.1.2 A Program for Producing the Equations of Motion . . . 307
7.1.3 Results and Numerical Checks . . . 309
7.2 The Method of Solution of the Equations for the Quasi-periodic Orbit . 323
7.2.1 General Expression of the Equations. The Recurrent Procedure . 323
7.2.2 A Lindstedt–Poincaré Device for the Quasi-periodic Orbit . . . 324

7.2.3 Description of the Program to Obtain the Analytic Quasi-periodic Orbit . . . 326
7.3 The Results. Problems Related to Small Divisors . . . 329
7.3.1 Sample of Results in Several Cases . . . 329
7.3.2 The Problem of Small Divisors . . . 330
7.3.3 The Analytic Expression of the Nominal Orbit . . . 331
7.4 References . . . 344

Chapter 8 Numerical Refinement of the Quasi-periodic Orbit: The Final Numerical Determination of the Orbit and of the Projection Factors 345
8.1 A Parallel Shooting Method for the Numerical Refinement of the Quasi-periodic Orbit . . . 345
8.1.1 The Input Parameters to Get the Nominal Orbit . . . 345
8.1.2 A First Shooting Procedure. Description of the Program Used to this End . . . 348
8.1.3 Numerical Results and Discussion of the First Procedure . . . 356
8.1.4 A Second Shooting Procedure . . . 358
8.1.5 Numerical Results and Discussion of the Second Procedure . . . 359
8.1.6 Comments on Different Shooting Approaches . . . 360
8.2 The Final Nominal Orbit and Projection Factors . . . 370
8.2.1 The Problem of the Floquet Modes for a Quasi-periodic Orbit . 370
8.2.2 The Adopted Procedure to Obtain the Projection Factors . . . 371
8.2.3 A Program for the Final Nominal Computations. Results and Discussion . . . 372
8.3 References . . . 379

Chapter 9 The On/off Control Strategy: Simulations and Discussion 381
9.1 A Simulation Program for the Motion of the Controlled Spacecraft . . . 381
9.1.1 The Equations of Motion. Introduction of Random and Systematic Noise in the Solar Radiation Pressure Effect . . . 381
9.1.2 The Effect of Tracking Errors and Errors in the Execution of Maneuvers . . . 382
9.1.3 How to Decide When a Control Should be Applied . . . 383
9.1.4 Description of the Program . . . 384
9.2 Numerical Results of the Simulations . . . 385
9.2.1 A Summary of Results . . . 385
9.2.2 Discussion on the Effect of the Different Errors and Magnitudes 390
9.3 The Feasibility of the Control Using Solar Radiation Pressure . . . 402
9.3.1 The Determination of the Maneuver Interval. Discussion of Feasibility . . . 402

9.3.2 Simulations of the Radiation Pressure Control. Results and Discussion . . . 403

Chapter 10 Other Cases and Further Simulations 409
10.1 The L_3 Case for the Sun–Barycenter Problem . . . 409
10.1.1 Computation of Initial Conditions . . . 409
10.1.2 Results of Simulations . . . 410
10.2 The L_3 Case for the Earth–Moon Problem . . . 410
10.2.1 Results of a Simulation . . . 410
10.3 The Triangular Cases for the Sun–Barycenter Problem . . . 413
10.3.1 The Adopted Model for the Motion Near L_4 and L_5 . . . 413
10.3.2 Development of the Simplified Equations of Motion . . . 415
10.3.3 Analytic Solution. On the Existence of Almost Tori . . . 419
10.3.4 Simulations Starting at the Instantaneous Equilibrium Point or with Suitable Initial Conditions . . . 420
10.4 Simulations for the Triangular Cases in the Earth–Moon Problem . . . 428
10.4.1 Results of the Simulations . . . 428
10.5 References . . . 430

Chapter 11 Summary and Outlook 433
11.1 Summary of the Achieved Results . . . 433
11.1.1 Concerning the Halo Orbits . . . 433
11.1.2 Concerning the Quasi-periodic Nominal Orbit . . . 435
11.1.3 Concerning Station Keeping . . . 436
11.2 Possible Extensions of the Work . . . 439
11.2.1 The Use of Better Models for the Solar System . . . 439
11.2.2 The Translunar Problem Using the Real Solar System . . . 439
11.2.3 Stable Manifolds and the Transfer Problem . . . 440
11.3 Theoretical Problems . . . 440
11.3.1 The Small Divisors Problem for Quasi-periodic Orbits . . . 440
11.3.2 The Large Size Orbits in the Halo Family: Analytic Study and Perturbation to a Quasi-periodic Orbit . . . 440
11.3.3 The Floquet Modes for a Quasi-periodic Orbit. Searching for an Analytic Approach . . . 441

Acknowledgments 443
