Preface	v
<b>Chapter 1 Subshifts of finite type: A key symbolic model</b>	<b>1</b>
1.1 Introduction . . . . .	1
1.2 Finite range interactions (Perron–Frobenius) . . . . .	2
1.3 Exponentially decaying interactions . . . . .	28
1.4 Non-Hölder interactions . . . . .	59
1.5 Historical and bibliographical notes . . . . .	67
<b>Chapter 2 Smooth uniformly expanding dynamics</b>	<b>71</b>
2.1 Introduction . . . . .	71
2.2 Smooth invariant measures . . . . .	74
2.3 One-dimensional differentiable case (spectrum) . . . . .	86
2.4 Higher dimensions . . . . .	92
2.5 The analytic case: Nuclearity . . . . .	96
2.5.1 Nuclear operators, traces, and determinants . . . . .	97
2.5.2 Three analytic applications . . . . .	106
2.6 Dynamical zeta functions and determinants . . . . .	112
2.7 Stochastic spectral stability . . . . .	119
2.7.1 SRB case . . . . .	121
2.7.2 Non-SRB case and zeta functions . . . . .	135
2.8 Historical and bibliographical notes . . . . .	139
<b>Chapter 3 Piecewise expanding systems</b>	<b>145</b>
3.1 Introduction . . . . .	145

3.2	Uniform expansion . . . . .	148
3.3	Stochastic stability of spectrum . . . . .	169
3.4	Nonuniform expansion: Exponential mixing . . . . .	184
3.5	Nonuniform expansion: Nonexponential mixing . . . . .	210
3.6	Historical and bibliographical notes . . . . .	219
<b>Chapter 4 Hyperbolic systems</b>		<b>225</b>
4.1	Introduction . . . . .	225
4.1.1	Linear hyperbolic toral automorphisms . . . . .	225
4.1.2	Physical measures and SRB measures . . . . .	228
4.1.3	Strategies for constructing SRB measures . . . . .	239
4.2	Reducing to expanding: Finite Markov partitions . . . . .	242
4.3	Reducing to expanding: Countable Markov towers . . . . .	247
4.4	Hyperbolic transfer operators . . . . .	269
4.4.1	Hyperbolic analytic surface diffeomorphisms . . . . .	269
4.4.2	Cones for smooth hyperbolic diffeomorphisms . . . . .	288
4.5	Historical and bibliographical notes . . . . .	291
