Contents

Chapter 1
Soliton Theory and Modern Physics
Guo Boling 1

1.1 Introduction 1
1.2 Water Wave and the Wave Equation Under Weak Nonlinear Action 5
1.3 Solitons in Plasma 18
1.4 Collapse of Langmuir Waves 38
1.5 Interaction of Solitons and Asymptotic Properties as $t \to \infty$ 43
1.6 Solitons in Molecular Systems 53
1.7 Toda Lattice and Born-Infeld Equation 64

Chapter 2
Inverse Scattering Methods
Li Yishen 69

2.1 Direct Scattering Problem 69
2.2 Inverse Scattering Problem 82
2.3 The Solution of the Initial Value Problem of the KdV Equation 87
2.4 AKNS Equation 94
2.5 The Direct and Inverse Scattering Problem of the AKNS Eigenvalue Problem 98
2.6 Solving the Initial Value Problems of AKNS Hierarchy by Inverse Scattering Method 106
2.7 KP Equation and Associated Inverse Scattering Method 109
2.8 Remarks 120

Chapter 3
Bäcklund Transformations and Darboux Transformations
Gu Chaohao 122

3.1 Introduction 122
3.2 Classical Darboux Matrix 126

3.3 Some Special Cases 134
3.4 Darboux Transformations for More General Cases 139
3.5 Darboux Transformation in 1 + 2 Dimensions 145
3.6 Some Remarks 149

Chapter 4
Classical Integrable Systems
Cao Cewen 152

4.1 Symplectic Manifold 153
4.2 Complete Integrability in the Liouville Sense 163
4.3 Several Finite-dimensional Integrable Systems 170

Chapter 5
Symmetry
Tian Chou 192

5.1 Symmetries 192
5.2 Strong Symmetry, Heredity 201
5.3 Commutator, Lie Algebra 210
5.4 Transformation 221

Chapter 6
Kac-Moody Algebras and Integrable Systems
Tu Guizhang 230

6.1 Integrable Systems in Lax's Sense 230
6.2 A Brief Introduction to Kac-Moody Algebras 232
6.3 Generalized Hierarchy of KdV Equations 255
6.4 τ Functions and the KP Hierarchy 266
6.5 Symmetry, Loop Algebras and Virasoro Algebras 291

Chapter 7
Soliton and Differential Geometry
Hu Hesheng 297

7.1 Fundamental Facts on the Theory of Surfaces 298
7.2 Surfaces of Negative Constant Curvature and the Sine-Gordon Equation 302
7.3 Line Congruences, Pseudo-spherical Line Congruences, and Bäcklund Transformations 307
7.4 Soliton Equations and Harmonic Maps 314
7.5 Nonlinear Partial Differential Equation Admitting Linear Integrable System 321
7.6 Soliton Surfaces 332

Chapter 8
Numerical Study of Nonlinear Waves
Guo Benyu 337

8.1 Finite Difference Method for the Korteweg-de Vries Equation 338
8.2 Numerical Study of Initial-boundary Value Problems of the Korteweg-de Vries Equation 342
8.3 Finite Element Method for the Korteweg-de Vries Equation 345
8.4 Spectral and Pseudospectral Method for the Korteweg-de Vries Equation 348
8.5 Numerical Methods for the Benjamin-Bona-Mahony Equation 351
8.6 Numerical Study of the Klein-Gordon Equation and the Sine-Gordon Equation 354
8.7 Numerical Study of the Schrödinger Equation and the Dirac Equation 361

Chapter 9
Solitons in the Theory of Gravitational Waves
Ge Molin 363

9.1 Introduction 363
9.2 General Solutions of BZG 366
9.3 One-Soliton Solution 372
9.4 New Type of Soliton Solutions 376
9.5 Hamiltonian Structure of BZ Gravity 385
