Chapter 6. Maximum and Minimum of Functions Subharmonic in the Plane	
6.0 Introduction	285
6.1 The Riesz–Herglotz Representation and the Milloux–Schmidt Inequality	285
6.1.1 The Milloux–Schmidt inequality	287
6.1.2 Maximum and minimum for functions of finite order	291
6.2 The HKN Inequality and Kjellberg’s Regularity Theorem	293
6.2.1 An integral inequality for functions in a semidisk	296
6.2.2 The Hellsten–Kjellberg–Norstad inequality	299
6.2.3 Maximum and minimum of functions of order less than one	302
6.2.4 An inequality for functions of order less than one	304
6.2.5 Proof of Kjellberg’s Theorem	306
6.3 Further Regularity Theorems	311
6.3.1 A lower bound for $v(-r)$	312
6.3.2 Global behaviour of the extremals	315
6.3.3 Regularity theorems for the Riesz mass and characteristic	324
6.3.4 The function $\theta(r)$ and local behaviour of the Riesz mass	326
6.3.5 Density theorems	331
6.3.6 The case of order one	342
6.3.7 Some other results	344
6.4 Cases when $C(\mu) = 1$; a Theorem of Beurling	344
6.4.1 Proof of Beurling’s Theorem	346
6.4.2 An extension	347
6.4.3 Minimum on a curve	349
6.4.4 Some counterexamples	351

6.5	The Wiman–Valiron Theory	354
6.5.1	Kövari's test sequences	356
6.5.2	Maximum modulus, maximum term and characteristic	359
6.5.3	Local behaviour near the maximum and the minimum of harmonic functions	362
6.5.4	Maximum, minimum and characteristic for s.h. functions	365
6.5.5	Some examples	371
6.6	Harmonic Functions in \mathbf{R}^m	374
6.7	The Minimum of Functions of Slow Growth	376
6.7.1	Functions of order $(\log r)^2$	379
6.7.2	Functions of polynomial growth	381

Chapter 7. Exceptional Sets

7.0	Introduction	387
7.1	Thin Sets	388
7.1.1	Wiener's criterion for the structure of thin sets	395
7.1.2	Proof of Wiener's Theorem	397
7.1.3	Wiener's criterion at finite points	401
7.1.4	Functions having minimal growth in the plane	402
7.2	Functions of Slow Growth in the Plane	403
7.2.1	Some general results on ψ -sequences	406
7.2.2	Proof of Theorems 7.10 and 7.11	410
7.2.3	Proof of Theorems 7.8 and 7.9; preliminary results	414
7.2.4	Proof of Theorem 7.8	419
7.2.5	Proof of Theorem 7.9	421
7.3	Geometric Estimates for Capacity	425
7.3.1	The capacity of an ellipsoid in \mathbf{R}^m , where $m \geq 3$	429
7.3.2	Capacity in \mathbf{R}^2	434
7.3.3	Projection and subadditivity	437
7.3.4	Exceptional sets on rays	441
7.3.5	Two counterexamples	444
7.4	Some Applications to Function Theory	449
7.4.1	Applications to p -valent functions	453
7.5	Minimum of Functions in a Half-plane	457
7.5.1	Completion of the proof of Hall's Theorem	462
7.5.2	Some examples	465
7.5.3	Boundary behaviour of $u(z)$	469
7.5.4	A form of the Phragmén–Lindelöf Principle	470
7.6	Boundary Behaviour in a Half-plane	474
7.6.1	Sufficient conditions for a rarefied set	475
7.6.2	Necessary conditions for a rarefied set	481
7.6.3	Further results on rarefied sets	485
7.6.4	Near-fine limits, equivalent subdomains and functions of bounded characteristic	496

7.7	Boundary Behaviour in the Unit Disk	502
7.7.1	Signed measures and characteristic for δ .s.h. functions	505
7.7.2	Some applications	510
7.7.3	Boundary behaviour of negative harmonic functions	515
7.7.4	Boundary behaviour of Green's potentials	518
7.7.5	Conclusion	528

Chapter 8. Tracts and Asymptotic Values of Plane Subharmonic Functions

8.0	Introduction	531
8.1	The Carleman–Tsuji–Heins Convexity Formula	532
8.1.1	Wirtinger's inequality	532
8.1.2	Statement of the convexity formula	535
8.1.3	Proof of Theorem 8.1 when u is smooth	537
8.1.4	Extension to general s.h. functions	540
8.1.5	Proof of Theorem 8.1 with $\alpha_0(r)$ instead of $\alpha(r)$	542
8.1.6	Completion of proof of Theorem 8.1	544
8.1.7	Inequalities for $I(r)$ and $B(r)$	546
8.2	Growth and Image of Functions in the Unit Disk	548
8.2.1	Proof of Theorem 8.5	551
8.2.2	Growth of weakly univalent functions	555
8.2.3	A condition on the area of the image	557
8.2.4	Some examples	560
8.3	Functions with N Tracts	561
8.3.1	Regularity theorems	564
8.3.2	Functions with one asymptotic value	573
8.3.3	Functions with asymptotic functions	575
8.3.4	Preliminary results for Fenton's Theorem	578
8.3.5	Completion of proof of Fenton's Theorem	584
8.4	Growth on Asymptotic Paths	586
8.4.1	Functions of order less than $\frac{1}{2}$	589
8.4.2	Some other results	591
8.4.3	Tracts and asymptotic values	592
8.5	Extremal Length	595
8.5.1	Application to functions with N tracts; Ahlfors' Spiral Theorem	599
8.5.2	Proof of Ahlfors' Theorem	605
8.5.3	Variation of the argument on a fixed circle	608
8.6	Conformal-Mapping Techniques	610
8.6.1	A Phragmén–Lindelöf Theorem for a strip	611
8.6.2	A length area principle	612
8.6.3	Ahlfors' inequalities	613
8.6.4	Eke's Regularity Theorem	616
8.7	Regularity Theorems for the Tracts	619
8.7.1	Proof of Theorem 8.27	622

8.7.2	Consequences of Theorem 8.27	624
8.7.3	Conclusions	627
8.7.4	Examples	629
8.8	Minimum on a Curve for Functions of Finite Lower Order	631
8.8.1	Proof of Theorem 8.29	636
8.8.2	The case $K = 1$	639
 Chapter 9. Baernstein's Star Function and its Applications		
9.0	Introduction	645
9.1	The Fundamental Theorem on the Star Function	646
9.1.1	Two lemmas of Sjögren	650
9.1.2	Completion of the proof of Theorem 9.1	652
9.2	Means and Symmetrization	654
9.2.1	Some real-variable results	655
9.2.2	Symmetrization and the Green's function	658
9.2.3	Proof of the majorization theorem for Green's functions	661
9.2.4	Symmetrization and harmonic measure	665
9.3	Majorization Theorems for Univalent Functions	669
9.3.1	Proof of Theorem 9.6	672
9.3.2	Weakly univalent functions	673
9.4	Conformal Mapping and the Hyperbolic Metric	678
9.4.1	The hyperbolic metric.	682
9.4.2	Hyperbolic distances and Schottky's Theorem	684
9.4.3	Some estimates for the hyperbolic metric	688
9.5	Symmetrization and the Hyperbolic Metric	692
9.5.1	Preliminary results	693
9.5.2	Proof of Theorem 9.15	698
9.5.3	Application to the hyperbolic metric	698
9.5.4	A sharp form of Landau's Theorem	702
9.5.5	Numerical estimates for $\sigma(r)$ at 1 and ∞	704
9.5.6	Examples on Schottky's Theorem.	707
9.6	Pólya Peaks and the Local Indicator for Functions in the Plane.	708
9.6.1	Pólya peaks	710
9.6.2	The Phragmén–Lindelöf indicator	712
9.6.3	Proof of Theorem 9.20	716
9.6.4	Uniform absolute continuity and Fuchs's Small Arcs Lemma	721
9.6.5	An estimate for $h'(\theta)$	727
9.7	Applications to Functions in the Plane: Paley's Conjecture	730
9.7.1	Baernstein's Spread Theorem and the sum of the deficiencies	733
9.7.2	The Edrei–Fuchs Ellipse Theorem	738
9.8	Some Examples	739
9.8.1	Harmonic splines	739
9.8.2	Examples illustrating Section 9.7	742
9.9	Conclusion.	750

Chapter 10. Examples of Subharmonic and Regular Functions, and the MacLane–Hornblower Class

10.0	Introduction	751
10.1	Minimal Positive Harmonic Functions	752
10.1.1	Functions with n tracts	755
10.1.2	Warschawski's Theorem	757
10.1.3	The asymptotic estimate	760
10.2	Functions with Bounded Minimum	765
10.2.1	Functions with n tracts	769
10.2.2	Functions bounded on spirals in the plane	775
10.3	Asymptotic Paths and the MacLane–Hornblower Theory	779
10.3.1	The Access Theorem	779
10.3.2	The class \mathcal{A} of MacLane and Hornblower	784
10.3.3	Proof that (iii) \Rightarrow (i); preliminary results	786
10.3.4	Completion of the proof of Theorem 10.10	789
10.3.5	Some examples	793
10.4	Growth Conditions for the Class \mathcal{A}	797
10.4.1	Construction of the domain	798
10.4.2	Proof of Theorem 10.11	799
10.4.3	Spiral functions and their growth	802
10.4.4	Proof of Theorem 10.14; preliminary estimates	805
10.4.5	Completion of the proof of Theorem 10.14	808
10.4.6	Some further results	811
10.5	The Kjellberg–Kennedy–Katifi approximation method	812
10.5.1	Functions in the plane	815
10.5.2	Functions in the unit disk	818
10.5.3	Regular functions bounded on curves in the plane	819
10.5.4	The spirals of Theorem 10.8	824
10.5.5	A global upper bound	828
10.5.6	Some examples	833
10.5.7	The rate of tending to zero along the curves	838
10.6	Approximation in the Unit Disk	841
10.6.1	Regular functions tending to 0 and ∞ on different spirals in the unit disk	846
10.7	The Existence of Thin Components	852
10.7.1	A function with two thin components	854
10.7.2	A function with non-countably many thin components	856
10.7.3	A theorem on thin components	858
10.7.4	A function with one thick and two thin limit components	859
	References	865
	Index	873
