CONTENTS

Introduction VII
Terminology and notation IX

Part I Theory on General Harmonic Spaces

§1. Harmonic spaces
1-1. Definition of harmonic spaces 1
1-2. Brelot's harmonic space 3
1-3. Bauer-Boboc-Constantinescu-Cornea's harmonic space 6
1-4. Examples 9
1-5. Properties of the base space of a harmonic space 11
1-6. Properties of hyperharmonic functions 13

§2. Superharmonic functions and potentials
2-1. Superharmonic functions 16
2-2. Potentials 18
2-3. Reduced functions 20
2-4. P-sets 22
2-5. The space $\mathcal{R}(U)$ 28

§3. Gradient measures
3-1. Measure representations 33
3-2. Existence of measure representations on Brelot's harmonic spaces 35
3-3. Properties of measure representations 38
3-4. Definition of gradient measures 41
3-5. Basic properties of gradient measures 44
3-6. Composition of functions in $\mathcal{R}(U)$ with C^2-functions 47
3-7. The case where X is a Euclidean domain 54

Part II Green's Formulae on Self-adjoint Harmonic Spaces

§4. Self-adjoint harmonic spaces and Green potentials
4-1. Dirichlet problems 56
4-2. Symmetric Green functions 61
4-3. Self-adjoint harmonic spaces 63
4-4. Fundamental properties of Green potentials 67
4-5. Canonical measure representation 69
4-6. PB-domains 71
4-7. Energy principle 76

4-8. Green's formula for functions in $Q_{IC}(U)$ 80

§5. Energy-finite harmonic functions and Green's formula

5-1. Preliminary lemmas 86

5-2. Bounded energy-finite harmonic functions and preliminary Green's formula 91

5-3. Green's formula on PB-domains 94

5-4. Green's formula for general open sets 98

Part III Spaces of Dirichlet-finite and Energy-finite Functions on Self-adjoint Harmonic Spaces

§6. Spaces of Dirichlet-finite and energy-finite harmonic functions

6-1. Harnack's inequality 101

6-2. Lattice structures 103

6-3. Boundedness 108

6-4. Completeness 115

6-5. The space of energy-finite functions and decomposition theorems 119

6-6. Density of $\mathcal{H}_{BE}(U)$ in $\mathcal{H}_{E}(U)$ 129

§7. Functional completion

7-1. Completion of $\mathcal{H}(U)$ 134

7-2. Extension of Green's formula and its applications 139

7-3. Spaces $\mathcal{D}_{E}(U)$, $\mathcal{D}_{D}(U)$, $\mathcal{D}_{E,0}(U)$ and $\mathcal{D}_{D,0}(U)$ 143

7-4. Another extension of Green's formula 149

7-5. Royden decomposition 151

§8. Royden boundary

8-1. Royden algebra 154

8-2. Royden boundary 159

8-3. Normal derivatives and Neumann problems 163

APPENDIX : Networks 170
