

CONTENTS

CHAPTER I. PRELIMINARIES

1. Polyharmonic functions of finite degree	1
2. Fundamental solutions, Green's formula and Green's function	7
3. Estimates	12
4. Analytic and holomorphic functions of several variables	16

CHAPTER II. POLYHARMONICITY AND ANALYTIC CONTINUATION

1. Polyharmonicity: Laplacian order and type	25
2. Serio-integral representation	34
3. Harmonicity hulls of domains in \mathbb{R}^n , $n \geq 2$	55
4. Monodromy groups of harmonicity hulls	69

CHAPTER III. SINGULARITIES IN \mathbb{R}^n

1. Principal parts	77
2. Separation of singularities	

CHAPTER IV. LOCAL LAPLACIAN ORDER AND TYPE

1. Basic properties and extremal principles	98
2. Convexity	112

CHAPTER V. THE ALMANSI EXPANSION

1. The Almansi expansion for holomorphic functions	122
2. Characterization of order and type by the Almansi coefficients	131
3. Examples	148

CHAPTER VI. EXTENSIONS AND APPLICATIONS

1. Harmonic extension to \mathbb{R}^{n+1}	154
2. Relations between Laplacian order and exponential order of entire functions	164

3. Bounded polyharmonic functions	169
4. Comparison with Gevrey classes	173
5. Solutions of metaharmonic and related partial differential equations	174
6. Boundary value problems for polyharmonic functions	180
7. Analytic solutions of the heat equation	197

APPENDIX. HOLOMORPHIC CAPACITY

A1. Basic properties	208
A2. Some examples	210
A3. Polar and non-polar sets	220
A4. Estimates and continuity properties	223
A5. Applications to sequences of holomorphic functions	230
A6. Completeness	245
A7. Holomorphic capacity on manifolds	250
