

## CONTENTS

<i>Chapter I.</i> Dependence of Solutions on Small Parameters. Applications of Relaxation Oscillations	
1. Smooth Dependence. Poincaré's Theorem . . . . .	1
2. Dependence of Solutions on a Parameter, on an Infinite Time Interval . . . . .	3
3. Equations with Small Parameters Multiplying Derivatives . . . . .	4
4. Second-Order Systems. Fast and Slow Motion. Relaxation Oscillations . . . . .	9
5. Systems of Arbitrary Order. Fast and Slow Motion. Relaxation Oscillations . . . . .	16
6. Solutions of the Degenerate Equation System . . . . .	24
7. Asymptotic Expansions of Solutions with Respect to a Parameter . . . . .	29
8. A Sketch of the Principal Results . . . . .	34
<i>Chapter II.</i> Second-Order Systems. Asymptotic Calculation of Solutions	
1. Assumptions and Definitions . . . . .	39
2. The Zeroth Approximation . . . . .	45

3. Asymptotic Approximations on Slow-Motion Parts of the Trajectory . . . . .	48
4. Proof of the Asymptotic Representations of the Slow-Motion Part . . . . .	52
5. Local Coordinates in the Neighborhood of a Junction Point . . . . .	56
6. Asymptotic Approximations of the Trajectory on the Initial Part of a Junction . . . . .	60
7. The Relation between Asymptotic Represen- tations and Actual Trajectories in the Initial Junction Section . . . . .	62
8. Special Variables for the Junction Section . . . . .	67
9. A Riccati Equation . . . . .	68
10. Asymptotic Approximations for the Trajectory in the Neighborhood of a Junction Point . . . . .	72
11. The Relation between Asymptotic Approxima- tions and Actual Trajectories in the Immediate Vicinity of a Junction Point . . . . .	77
12. Asymptotic Series for the Coefficients of the Expansion Near a Junction Point . . . . .	82
13. Regularization of Improper Integrals . . . . .	89
14. Asymptotic Expansions for the End of a Junction Part of a Trajectory . . . . .	96
15. The Relation between Asymptotic Approxi- mations and Actual Trajectories at the End of a Junction Part . . . . .	99
16. Proof of Asymptotic Representations for the Junction Part . . . . .	103

17. Asymptotic Approximations of the Trajectory on the Fast-Motion Part . . . . .	107
18. Derivation of Asymptotic Representations for the Fast-Motion Part . . . . .	111
19. Special Variables for the Drop Part . . . . .	114
20. Asymptotic Approximations of the Drop Part of the Trajectory . . . . .	119
21. Proof of Asymptotic Representations for the Drop Part of the Trajectory . . . . .	125
22. Asymptotic Approximations of the Trajectory for Initial Slow-Motion and Drop Parts . . . . .	132
 <i>Chapter III. Second-Order Systems. Almost-Discontinuous Periodic solutions</i>	
1. Existence and Uniqueness of an Almost-Discontinuous Periodic Solution . . . . .	139
2. Asymptotic Approximations for the Trajectory of a Periodic Solution . . . . .	143
3. Calculation of the Slow-Motion Time . . . . .	144
4. Calculation of the Junction Time . . . . .	145
5. Calculation of the Fast-Motion Time . . . . .	156
6. Calculation of the Drop Time . . . . .	157
7. An Asymptotic Formula for the Relaxation-Oscillation Period . . . . .	164
8. Van der Pol's Equation. Dorodnitsyn's Formula . . . . .	168

<i>Chapter IV. Systems of Arbitrary Order. Asymptotic Calculation of Solutions</i>	
1. Basic Assumptions . . . . .	171
2. The Zeroth Approximation . . . . .	173
3. Local Coordinates in the Neighborhood of a Junction Point . . . . .	176
4. Asymptotic Approximations of a Trajectory at the Beginning of a Junction Section . . . . .	179
5. Asymptotic Approximations for the Trajectory in the Neighborhood of a Junction Point . . . . .	187
6. Asymptotic Approximation of a Trajectory at the End of a Junction Section . . . . .	193
7. The Displacement Vector . . . . .	196
<i>Chapter V. Systems of Arbitrary Order. Almost-Discontinuous Periodic Solutions</i>	
1. Auxiliary Results . . . . .	199
2. The Existence of an Almost-Discontinuous Periodic Solution. Asymptotic Calculation of the Trajectory . . . . .	203
3. An Asymptotic Formula for the Period of Relaxation Oscillations . . . . .	209
References . . . . .	217
Index . . . . .	223
