

# CONTENTS

## PART I

### The laws of the exact sciences

Chapter 1.	The mathematical form of the laws . . . . .	15
	(a) Linear differential equations with constant coefficients . . . . .	15
	(b) Differential equations of non-linear type or with variable coefficients . . . . .	19
	(c) Partial differential equations . . . . .	20
	(d) Integral equations . . . . .	20
	(e) Difference equations . . . . .	21
	(f) Random processes . . . . .	21
Chapter 2.	Initial and starting values . . . . .	23
	(a) Initial values . . . . .	23
	(b) Starting values . . . . .	24
	(c) Unit step function and the Dirac impulse . . . . .	26
	(d) The generalized derivative . . . . .	30
	(e) The importance of the generalized derivative . . . . .	33
Chapter 3.	The classical solution method . . . . .	36
	(a) The characteristic equation . . . . .	36
	(b) Disadvantages of the method . . . . .	38
	(c) The step-response function . . . . .	39
	(d) The weighting function . . . . .	43
	(e) Example of application . . . . .	47
Chapter 4.	Integral transformations . . . . .	50
	(a) The basic idea of integral transformations . . . . .	50
	(b) The Fourier series . . . . .	52
	(c) The Fourier integral . . . . .	54
	(d) The Laplace transformation . . . . .	56
	(e) Correlation functions . . . . .	58

## PART II

### The operation rules of the Laplace transformation

Chapter 5.	Definition of the Laplace transformation . . . . .	63
	(a) The Laplace integral . . . . .	63
	(b) The transforms of some functions . . . . .	65
	(c) The time-independent parameter . . . . .	68

Chapter 6.	Integration and differentiation in the $t$ -domain .....	71
	(a) The transform of the integral of a function .....	71
	(b) The transform of the derivative of a function .....	72
	(c) Applications .....	75
Chapter 7.	The similarity and translation theorems.....	78
	(a) The similarity theorem .....	78
	(b) Translation in the $t$ -domain .....	78
	(c) The attenuation theorem.....	80
Chapter 8.	The convolution theorem .....	82
	(a) The concept of convolution .....	82
	(b) The Laplace transform of the convolution .....	83
	(c) Proof of the convolution theorem .....	84
Chapter 9.	Inverse Laplace transformation .....	86
	(a) Elementary methods .....	86
	(b) The expansion theorem .....	87
	(c) Improper fractional functions .....	90
	(d) Multiple roots .....	92
	(e) Transcendent functions .....	95
Chapter 10.	Asymptotic correlations .....	99
	(a) The determination of Taylor's series .....	99
	(b) Limit value when $t \rightarrow \infty$ .....	101
	(c) Generalization of correlations .....	104
Chapter 11.	The inversion integral .....	111
	(a) The Riemann—Mellin formula .....	111
	(b) Some theorems of complex functions .....	112
	(c) Application of the theorem of residues .....	115
	(d) Functions with branch points .....	116
	(e) The significance of the inversion integral .....	119
Chapter 12.	Some further theorems .....	120
	(a) Differentiation and integration in the domain $s$ .....	120
	(b) More general operations .....	121
	(c) The inverse convolution theorem .....	122

## PART III

## Applications of the Laplace transformation

Chapter 13.	Summary of the most important operation rules .....	127
	(a) Exact correlations .....	127
	(b) Approximative formulae .....	130
	(c) Important correspondences .....	131
Chapter 14.	The solution of differential equations .....	132
	(a) The transformed equations .....	132
	(b) Inverse transformation .....	134
	(c) Advantages of the method and limitations of its application .....	135
	(d) Partial differential equations .....	136
Chapter 15.	The transfer function .....	140
	(a) The concept of the transfer function .....	140
	(b) The operational step-response function.....	141
	(c) Approximate evaluation of the weighting function theorem ...	142

Chapter 16. Examination of stability .....	145
(a) The concept of stability .....	145
(b) The Routh—Hurwitz criterion .....	147
(c) The method of continued fractions .....	150
Chapter 17. Characteristic excitations .....	153
(a) Sinusoidal excitation .....	153
(b) Sectionally changing excitation .....	155
(c) Periodic excitation .....	160
(d) The Fourier series of the solution .....	163
(e) Solution in sectional form .....	167
(f) Comparison of the two methods .....	170
Chapter 18. Operational impedances .....	173
(a) The concept of operational impedances .....	173
(b) The application of operational impedances .....	175
(c) Generalization of the method .....	176
(d) The analogy of mechanical and electrical systems .....	179
(e) An extension of the analogy .....	182
Chapter 19. Special applications .....	185
(a) The summation of series .....	185
(b) Calculation of integrals .....	192
(c) Integral equations of convolution type .....	193

## PART IV

## Examples of the application of the Laplace transformation in engineering

Chapter 20. Applications in the theory of vibrations .....	201
(a) Longitudinal oscillation .....	201
(b) Rotational oscillations .....	214
(c) Transverse vibrations .....	221
Chapter 21. Applications in circuit theory .....	223
(a) Reducible passive networks .....	223
(b) Irreducible passive networks .....	244
(c) Active networks .....	255
(d) Networks of varying structure .....	260
Chapter 22. Four-pole chains .....	265
(a) General correlations .....	265
(b) Filter circuits .....	271
(c) Infinite filter chain .....	272
(d) Active four-pole chains .....	274
Chapter 23. Electromechanical systems .....	278
(a) The movement of the galvanometer .....	278
(b) Transient phenomena of electric motors .....	284
Chapter 24. Applications in control engineering .....	288
(a) Block diagrams .....	288
(b) Classification of elements .....	290
(c) Feedback .....	291
(d) The transfer functions of some elements .....	295

Chapter 25. Miscellaneous examples for the solution of differential equations	303
(a) The movement of a point-like mass	303
(b) Applications in nuclear engineering	308
(c) Transient warming	318
(d) General chain processes	320
Chapter 26. Oscillation of continuums	324
(a) The vibrating string	324
(b) The vibrating membrane	333
(c) Longitudinal oscillations	337
(d) Transverse oscillations	347
Chapter 27. Applications in thermodynamics	357
(a) The infinite half-space	357
(b) The infinite slab	362
(c) Long bars	368
(d) Radial cylindrical heat flow	371
(e) Spherically symmetrical heat flow	377
Chapter 28. Applications in fluid mechanics	380
(a) Problems in gas dynamics	380
(b) Applications in hydrodynamics	386
Chapter 29. Electrical transmission lines	397
(a) The basic relationships	397
(b) Ideal lines	403
(c) Lines with low attenuation	409
(d) The Thomson cable	411
(e) The general line	413
Chapter 30. Networks with distributed parameters	416
(a) The general relationships	416
(b) Coil with distributed capacity	419
(c) The capacity chain	421
Chapter 31. Electromagnetic waves	424
(a) Eddy currents	424
(b) Waves propagating along leads	428
Chapter 32. Differential equations which are non-linear or with varying coefficients	431
(a) General remarks	431
(b) A problem with sectional structure	431
(c) Differential equations with varying coefficient	435
(d) A non-linear problem	437

## PART V

## The spectrum method

Chapter 33. The spectrum of periodic functions	443
(a) The Fourier series	443
(b) Calculation of the complex spectrum	446
(c) Examples on the calculation of the spectrum	448

Chapter 34. The spectrum of non-periodic functions .....	462
(a) The Fourier transformation .....	462
(b) The spectrum of starting functions .....	465
(c) The spectrum of some starting functions .....	467
(d) The truncated function and its spectrum .....	478
Chapter 35. The spectrum of non-starting functions .....	481
(a) Two-sided Laplace transformation .....	481
(b) Generalization of the two-sided Laplace transformation .....	485
(c) Band width and signal width .....	487
(d) Signals with limited band width .....	497
Chapter 36. Transfer characteristics .....	501
(a) The concept of transfer characteristics .....	501
(b) Correlation of functions characterizing the system .....	504
(c) The locus of transfer characteristics .....	509
(d) Logarithmic representation of transfer characteristics .....	517
Chapter 37. Stability criteria .....	528
(a) The Mikhailov-Leonhard stability criterion .....	528
(b) The Nyquist stability criterion .....	531
(c) Logarithmic representation of the Nyquist criterion .....	537

## PART VI

## The discrete Laplace transformation

Chapter 38. Rules of discrete transformation .....	543
(a) The sampled signal and its transform .....	543
(b) The discrete function and its transform .....	547
(c) Some theorems of discrete transformation .....	548
(d) Correlation of the transforms .....	554
Chapter 39. Modified discrete transformation .....	558
(a) Definition of the modified transformation .....	558
(b) Some theorems on modified transformation .....	561
(c) Correlation between various transforms .....	565
Chapter 40. Sampled-data systems .....	569
(a) The transfer function .....	569
(b) The transfer function of elements connected in tandem .....	572
(c) Feedback system .....	578
(d) Stability criteria .....	580
Chapter 41. Calculation of the continuous output signal .....	586
(a) The modified transfer function .....	586
(b) Composite system .....	590
(c) The system with finite settling time .....	593
Chapter 42. The solution of difference equations .....	596
(a) Difference equations .....	596
(b) Solution with the discrete transformation .....	597
(c) Applications .....	601

## PART VII

## Random processes

Chapter 43. Correlation functions .....	609
(a) Probability density functions .....	609
(b) The autocorrelation function .....	612
(c) The cross-correlation function .....	619
Chapter 44. The power spectrum.....	623
(a) Transformed correlation function .....	623
(b) The spectral representation of the correlation function .....	625
(c) The power spectrum of some signals .....	628
Chapter 45. Examination of signal transfer .....	635
(a) Correspondence of correlation functions .....	635
(b) The correlation of the power spectra.....	637
(c) Statistical error .....	642
Chapter 46. Optimum system .....	646
(a) Conditions of optimalization.....	646
(b) Proof of the process .....	649
(c) Some examples of optimum transfer function .....	652
(d) Compensating elements .....	660
Chapter 47. Sampled random signals .....	665
(a) Correlation functions .....	665
(b) Two-sided discrete transformation.....	669
(c) Examination of signal transfer.....	673
(d) Statistical errors .....	676
(e) Optimum sampled-data system .....	679

## PART VIII

## Appendices

Appendix 1. Definition of functions occurring in the text and tables, and some of the basic correlations .....	685
Appendix 2. Roots of some transcendental equations .....	688
Appendix 3. Table of Laplace transforms .....	691
Appendix 4. Table of discrete transforms .....	737
Appendix 5. Decomposition into partial fractions .....	739
Bibliography .....	752
Index .....	754
