CONTENTS

Introduction		7
Chapter I.	Integral Equations in Convolution with Discontinuous Presymbols	11
Sect. 1.	Definitions and Auxiliary Propositions	11
Sect. 2.	Basic Properties of the Integral Operators in Convolution	25
Sect. 3.	Equations in Convolution with Continuous Presymbols	42
Sect. 4.	Equations in Convolution with Discontinuous Presymbols	47
Sect. 5.	Operators in Convolution in the Spaces of Bessel Potentials	61
Sect. 6.	Operators of Multiplicative Convolution in Hölder Spaces of Functions	64
Sect. 7.	Convolution-Type Equations with Discontinuous Coefficients	71
Chapter II.	Singular Integral Equations with Fixed Singularities in Kernels	83
Sect. 8.	Singular Equations with Fixed Singularities	83
Sect. 9.	Equations (8.1) in the Space $L_p(J, x^{\alpha}(1-x)^{\gamma})$	94
Sect.10.	Singular Integral Equations with Two Fixed Singularities	99
Sect.11.	Smoothness and Asymptotical Behaviour of Solution of eqs. (8.1) and (10.1)	104
Sect.12.	Some Further Results	120

Chapter III. Some Applications 127

Sect.13. H. Bueckner's Integral Equation 127

Sect.14. A Notched Half-Plane 136

Sect.15. A Notched Half-Plane with a Rigid Core 140

Sect.16. Influence of a Stringer on the Stress Distribution Near a Circular Hole 144

Sect.17. Transfer of Load from a Stiffener to a Sheet 146

Sect.18. Bending of a Semi-Circular Plate 149

Sect.19. A System of Integral Equations 152

Sect.20. F. Tricomi's Integral Equation 155

Sect.21. On the Integral Equations Appearing in the Dislocation Theory 162
