CHAPTER I. FUNCTIONS OF A COMPLEX VARIABLE	1
1.1. Introduction	1
1.2. Complex numbers	1
1.3. Complex planes	5
1.4. Relations between the z - and s -planes	8
1.5. Additional transformations between the z - and s -planes	9
1.6. Simplification of problems by transforming into the complex s -plane	12
1.7. Functions in the complex plane	15
1.8. Poles of complex functions	16
1.9. Zeros of complex functions	18
1.10. The pole-zero diagram	19
1.11. Integration along a curve in the s -plane	20
1.12. Integration around a pole	23
1.13. Integration around a path not containing a pole	25
1.14. Residues	27
1.15. Integration around two or more poles in the s -plane	32
1.16. Summary of Chapter I	35
CHAPTER II. THE FOURIER SERIES AND INTEGRAL	37
2.1. The Fourier series	37
2.2. Exponential form of the Fourier series	40
2.3. The Fourier integral	46
2.4. The unit step function	50
2.5. The Fourier transform of the unit step function	51
2.6. Convergence factors	52
2.7. The complex Fourier integral transform	54
2.8. The Laplace transform	55

	PAGE
CHAPTER III. THE LAPLACE TRANSFORMATION	57
3.1. Introduction	57
3.2. Transforms of constants	58
3.3. The Laplace transform of exponentials	59
3.4. The Laplace transform of imaginary exponents	60
3.5. The Laplace transform of trigonometric terms	60
3.6. The Laplace transform of hyperbolic functions	62
3.7. The Laplace transform of complex exponentials	64
3.8. Transforms of more complicated functions	64
3.9. Additional practice with sinewaves	65
3.10. The Laplace transform of a derivative	66
3.11. The Laplace transform of an integral	68
CHAPTER IV. THE INVERSE LAPLACE TRANSFORMATION	72
4.1. Introduction	72
4.2. Functions of s from electronic networks	76
4.3. Functions of s involving simple poles	79
4.4. Functions of s involving both simple poles and zeros	83
4.5. Functions of s having higher order poles	86
CHAPTER V. LAPLACE TRANSFORM THEOREMS	90
5.1. Introduction	90
5.2. Linear s -plane translation	90
5.3. Final value theorem	93
5.4. Initial value theorem	96
5.5. Real translation	98
5.6. Complex differentiation	101
5.7. Complex integration	103
5.8. Sectioning a function of time	105
5.9. The convolution theorem	108
5.10. Scale change theorem	112
5.11. Summary of Chapter V	114

CHAPTER VI. NETWORK ANALYSIS BY MEANS OF THE LAPLACE TRANSFORMATION	116
6.1. Introduction	116
6.2. Writing network equations for multiple loop circuits	117
6.3. Relay damping problems	119
6.4. The Wien-bridge oscillator	122
6.5. A phase-shift oscillator	126
6.6. Harmonic discrimination in a three-section phase shift oscillator	129
6.7. The $R-C$ cathode follower oscillator	131
6.8. Odd and even functions of s	133
6.9. $R-C$ voltage step-up networks	136
6.10. $R-C$ oscillator, single section variable capacity	139
6.11. Active integrating and differentiating networks	142
6.12. Operational amplifiers	145
6.13. Charge amplifiers	147
6.14. Analysis of the charge amplifier	149
6.15. Reactive feedback voltage amplifiers	152
6.16. Analysis of three-stage reactive feedback amplifier	156
6.17. Single section low-pass $R-C$ filter	159
6.18. Two-section non-tapered $R-C$ low-pass filter	160
6.19. Three-section non-tapered $R-C$ low-pass filter	162
6.20. Iterative networks	164
6.21. Initial conditions in network parameters	167
6.22. Initial charge or voltage on condenser	167
6.23. Initial current in an inductance	169
6.24. Mutual inductance	173
CHAPTER VII. TRANSFORMS OF SPECIAL WAVESHAPES AND PULSES	179
7.1. Introduction	179
7.2. Laplace transform of a displaced step function	179

	PAGE
7.3. Transform of the dirac delta function	183
7.4. Derivatives of infinite slopes expressed as delta functions	184
7.5. Sampling another function with a delta function	185
7.6. Fourier coefficients ascertained by means of delta functions	186
7.7. The Laplace transform of a series of pulses	189
7.8. The Laplace transform of a general periodic wave	191
7.9. The Laplace transform of a single sawtooth pulse	194
7.10. Pulsed periodic functions	195
7.11. Transform of a displaced ramp function	198
CHAPTER VIII. ELECTRONIC FILTERS	199
8.1. Introduction	199
8.2. Normalization of transfer functions	199
8.3. Low-pass filters	203
8.4. Maximally flat functions	205
8.5. Pole location for Butterworth functions	208
8.6. Synthesis of the third-order maximally flat function	211
8.7. High-pass maximally flat functions	213
8.8. Maximally flat band-pass filters	214
8.9. Design of a band-pass filter	215
8.10. The band-rejection filter	218
8.11. Matched low-pass filters	219
8.12. Magnitude and phase functions of s	221
8.13. Maximally flat time-delay filters	225
8.14. The linear-phase approximation	228
8.15. Bessel polynomials, or linear-phase filter design made easy	234
8.16. Finding the transfer function from a given magnitude	237
8.17. Tchebycheff and Legendre polynomial filters	239
8.18. Active n th order low-pass filters	242

	PAGE
8.19. Optimum n -section R - C filters for high voltage power supplies	245
CHAPTER IX. SPECIALIZED APPLICATIONS OF THE LAPLACE TRANSFORM	249
9.1. Functions of \sqrt{s}	249
9.2. Application of the impedance $1/\sqrt{s}$ in oscillator design	252
9.3. Iterative networks	255
9.4. Transfer functions by tabular methods	258
9.5. Simplifications with the tabular method	261
9.6. Iterative networks, Pascal triangle method	265
9.7. Formulas for iterative network coefficients	271
9.8. Alternate approach to the Laplace integral	272
9.9. The Laplace integral used to sum infinite series into closed form	274
CHAPTER X. SYNTHESIS OF TRANSFER FUNCTIONS BY MODELS	284
10.1. Introduction	284
10.2. Lossless network models	284
10.3. Odd and even parts of the transfer function	288
10.4. Synthesis of transfer impedances	289
10.5. Alternate method of transfer function synthesis	290
10.6. Conclusion	295
APPENDIX I	
(a) Driving point transforms	297
(b) Transfer functions	299
(c) Active transfer functions	309
APPENDIX II. OPERATIONAL LAPLACE TRANSFORM PAIRS	313
APPENDIX III. TABLE OF LAPLACE TRANSFORM PAIRS	314
INDEX	345
OTHER TITLES IN THE SERIES	349
