

## Contents

Introduction . . . . .	1
§ 1. Spaces of measures and signed measures. Operations on measures and signed measures (No. 1–5) . . . . .	1
§ 2. Space of distributions. Operations on distributions (No. 6–10) . . . . .	19
§ 3. The Fourier transform of distributions (No. 11–13) . . . . .	33
Chapter I. Potentials and their basic properties . . . . .	43
§ 1. M. Riesz kernels (No. 1–3) . . . . .	43
§ 2. Superharmonic functions (No. 4–5) . . . . .	52
§ 3. Definition of potentials and their simplest properties (No. 6–9) . . . . .	58
§ 4. Energy. Potentials with finite energy (No. 10–15) . . . . .	77
§ 5. Representation of superharmonic functions by potentials (No. 16–18) . . . . .	101
§ 6. Superharmonic functions of fractional order (No. 19–25) . . . . .	111
Chapter II. Capacity and equilibrium measure. . . . .	131
§ 1. Equilibrium measure and capacity of a compact set (No. 1–5) . . . . .	131
§ 2. Inner and outer capacities and equilibrium measures. Capacitability (No. 6–10) . . . . .	143
§ 3. Metric properties of capacity (No. 11–14) . . . . .	258
§ 4. Logarithmic capacity (No. 15–18) . . . . .	167
Chapter III. Sets of capacity zero. Sequences and bounds for potentials . . . . .	178
§ 1. Polar sets (No. 1–2) . . . . .	178
§ 2. Continuity properties of potentials (No. 3–4) . . . . .	185
§ 3. Sequences of potentials of measures (No. 5–8) . . . . .	190
§ 4. Metric criteria for sets of capacity zero and bounds for potentials (No. 9–11) . . . . .	196
Chapter IV. Balayage, Green functions, and the Dirichlet problem . . . . .	205
§ 1. Classical balayage out of a region (No. 1–6) . . . . .	205
§ 2. Balayage for arbitrary compact sets (No. 7–11) . . . . .	222
§ 3. The generalized Dirichlet problem (No. 12–14) . . . . .	240
§ 4. The operator approach to the Dirichlet problem and the balayage problem (No. 15–18) . . . . .	246
§ 5. Balayage for M. Riesz kernels (No. 19–23) . . . . .	260
§ 6. Balayage onto Borel sets (No. 24–25) . . . . .	273

Chapter V. Irregular points. . . . .	279
§ 1. Irregular points of Borel sets. Criteria for irregularity (No. 1—6) . . .	279
§ 2. The characteristics and types of irregular points (No. 7—8) . . . .	299
§ 3. The fine topology (No. 9—11) . . . . .	307
§ 4. Properties of set of irregular points (No. 12—15) . . . . .	312
§ 5. Stability of the Dirichlet problem. Approximation of continuous functions by harmonic functions (No. 16—22) . . . . .	330
Chapter VI. Generalizations . . . . .	352
§ 1. Distributions with finite energy and their potentials (No. 1—5) . . .	352
§ 2. Kernels of more general type (No. 6—11) . . . . .	363
§ 3. Dirichlet spaces (No. 12—15) . . . . .	377
Appendix . . . . .	399
Comments and bibliographic references. . . . .	403
Bibliography . . . . .	411
Index . . . . .	423
