1 An Introduction to Sliding Mode Variable Structure Control . . . . .	1
<i>Alan S.I. Zinober</i>	
1.1 Introduction . . . . .	1
1.2 Regulator System . . . . .	2
1.3 Model-Following Control System . . . . .	3
1.4 The Sliding Mode . . . . .	3
1.5 Nonlinear Feedback Control . . . . .	5
1.6 Second-Order Example . . . . .	7
1.7 Quadratic Performance . . . . .	10
1.8 Eigenstructure Assignment . . . . .	11
1.9 Sensitivity Reduction . . . . .	13
1.10 Eigenvalue Assignment in a Region . . . . .	14
1.10.1 Eigenvalue Assignment in a Sector . . . . .	14
1.10.2 Eigenvalue Assignment in a Disc . . . . .	15
1.10.3 Eigenvalue Assignment in a Vertical Strip . . . . .	16
1.11 Example: Remotely Piloted Vehicle . . . . .	17
1.12 Conclusions . . . . .	20
1.13 Acknowledgement . . . . .	20

2	An Algebraic Approach to Sliding Mode Control . . . . .	23
	<i>Hebertt Sira-Ramírez</i>	
2.1	Introduction . . . . .	23
2.2	Basic Background to Differential Algebra . . . . .	24
2.2.1	Basic Definitions . . . . .	24
2.2.2	Fliess's Generalized Controller Canonical Forms . . . . .	27
2.2.3	Input-Output Systems . . . . .	28
2.3	A Differential Algebraic Approach to Sliding Mode Control of Nonlinear Systems . . . . .	30
2.3.1	Differential Algebra and Sliding Mode Control of Nonlinear Dynamical Systems . . . . .	30
2.3.2	Dynamical Sliding Regimes Based on Fliess's GCCF . . . . .	32
2.3.3	Some Formalizations of Sliding Mode Control for Input-Output Nonlinear Systems . . . . .	34
2.3.4	An Alternative Definition of the Equivalent Control Dynamics . . . . .	35
2.3.5	Higher Order Sliding Regimes . . . . .	36
2.3.6	Sliding Regimes in Controllable Nonlinear Systems . . . . .	37
2.4	A Module Theoretic Approach to Sliding Modes in Linear Systems . . . . .	38
2.4.1	Quotient Modules . . . . .	40
2.4.2	Linear Systems and Modules . . . . .	41
2.4.3	Unperturbed Linear Dynamics . . . . .	41
2.4.4	Controllability . . . . .	42
2.4.5	Observability . . . . .	42
2.4.6	Linear Perturbed Dynamics . . . . .	43
2.4.7	A Module-Theoretic Characterization of Sliding Regimes . . . . .	43
2.4.8	The Switching Strategy . . . . .	44
2.4.9	Relations with Minimum Phase Systems and Dynamical Feedback . . . . .	45
2.4.10	Non-Minimum Phase Case . . . . .	45
2.4.11	Some Illustrations . . . . .	45
2.5	Conclusions . . . . .	46
3	Robust Tracking with a Sliding Mode . . . . .	51
	<i>Raymond Davies, Christopher Edwards and Sarah K. Spurgeon</i>	
3.1	Introduction . . . . .	51
3.2	Problem Formulation . . . . .	52
3.3	Design of the Sliding Manifold . . . . .	55
3.4	Nonlinear Controller Development and Associated Tracking Properties . . . . .	61
3.5	Design Example: Temperature Control of an Industrial Furnace . . . . .	68
3.6	Conclusions . . . . .	71
3.7	Acknowledgements . . . . .	71

4	Sliding Surface Design in the Frequency Domain . . . . .	75
	<i>Hideki Hashimoto and Yusuke Konno</i>	
4.1	Introduction . . . . .	75
4.2	Sliding Mode using the LQ Approach . . . . .	76
4.2.1	Linear Quadratic Optimal Sliding Mode . . . . .	76
4.2.2	Frequency Shaped LQ Approach . . . . .	77
4.3	$H^2/H^\infty$ approach . . . . .	78
4.3.1	$H^2/H^\infty$ Optimal Control . . . . .	78
4.3.2	Generalized Plant Structure . . . . .	79
4.3.3	Controller Solution . . . . .	80
4.4	Simulation . . . . .	82
4.4.1	Plant Model . . . . .	82
4.4.2	Controller Design . . . . .	83
4.4.3	Simulation Results . . . . .	84
4.5	Conclusions . . . . .	84
5	Sliding Mode Control in Discrete-Time and Difference Systems . . . . .	87
	<i>Vadim I. Utkin</i>	
5.1	Introduction . . . . .	87
5.2	Semi-Group Systems and Sliding Mode Definition . . . . .	88
5.3	Discrete-time Sliding Mode Control in Linear Systems . . . . .	93
5.4	Discrete-Time Sliding Modes in Infinite-Dimensional Systems .	96
5.5	Sliding Modes in Systems with Delays . . . . .	99
5.6	Finite Observers with Sliding Modes . . . . .	101
5.7	Control of Longitudinal Oscillations of a Flexible Bar . . . . .	103
5.8	Conclusions . . . . .	106
6	Generalized Sliding Modes for Manifold Control of Distributed Parameter Systems . . . . .	109
	<i>Sergey Drakunov and Ümit Özgür</i>	
6.1	Introduction . . . . .	109
6.2	Manifold Control: Generalization of the Sliding Mode Control Concept . . . . .	110
6.3	Canonical Form of the Distributed Parameter System . . . . .	112
6.3.1	Problem Statement . . . . .	113
6.3.2	Linear Transformation . . . . .	114
6.3.3	Nonsingularity of the Integral Transform . . . . .	115
6.4	Manifold Control of Differential-Difference Systems . . . . .	117
6.5	Wave Equation . . . . .	119
6.5.1	Supressing Vibrations of a Flexible Rod . . . . .	119
6.5.2	Rod with Additional Mass . . . . .	121
6.5.3	Semi-Infinite Rod with Distributed Control . . . . .	123
6.5.4	Dispersive Wave Equation . . . . .	124
6.6	Diffusion Equation . . . . .	125
6.7	Fourth Order Equation . . . . .	127
6.7.1	The Euler-Bernoulli Beam . . . . .	127

6.7.2	General Fourth Order Equation . . . . .	128
6.8	Conclusions . . . . .	129
7	Digital Variable Structure Control with Pseudo-Sliding Modes . . . . .	133
	<i>Xinghuo Yu</i>	
7.1	Introduction . . . . .	133
7.2	Sampling Effect on a VSC System . . . . .	133
7.3	Conditions for Existence of Discrete-Time Sliding Mode . . . . .	136
7.4	Digital VSC Systems . . . . .	138
7.4.1	Control Strategy . . . . .	139
7.4.2	Partitions in the State Space . . . . .	140
7.4.3	Design of SDVSC; Acquisition of Lower Bounds . . . . .	141
7.4.4	Design of SDVSC; Acquisition of Upper Bounds . . . . .	142
7.4.5	Modification of SDVSC — Elimination of Zigzagging . . . . .	144
7.5	Simulation Results . . . . .	146
7.5.1	Two-Dimensional System . . . . .	146
7.5.2	Example 1 . . . . .	148
7.5.3	Example 2 . . . . .	150
7.6	Conclusions . . . . .	151
8	Robust Observer-Controller Design for Linear Systems . . . . .	161
	<i>Hebertt Sira-Ramírez, Sarah K. Spurgeon and Alan S.I. Zinober</i>	
8.1	Introduction . . . . .	161
8.2	Matching Conditions in Sliding Mode State Reconstruction and Control of Linear Systems . . . . .	163
8.2.1	Matching Conditions in Sliding Mode Controller Design . . . . .	163
8.2.2	Matching Conditions in Sliding Mode Observer Design . . . . .	165
8.2.3	The Matching Conditions for Robust Output Regulation . . . . .	167
8.3	A Generalized Matched Observer Canonical Form for State Estimation in Perturbed Linear Systems . . . . .	168
8.4	A Matched Canonical Realization for Sliding Mode Output Feedback Regulation of Perturbed Linear Systems . . . . .	172
8.4.1	Observer Design . . . . .	173
8.4.2	Sliding Mode Controller Design . . . . .	174
8.5	Design Example: The Boost Converter . . . . .	176
8.6	Conclusions . . . . .	179
8.7	Acknowledgments . . . . .	179
9	Robust Stability Analysis and Controller Design with Quadratic Lyapunov Functions . . . . .	181
	<i>Martin Corless</i>	
9.1	Introduction . . . . .	181
9.2	Quadratic Stability . . . . .	183
9.2.1	Systems Containing Uncertain Scalar Parameters . . . . .	183
9.2.2	Systems Containing a Single Uncertain Matrix . . . . .	185
9.2.3	Quadratic Stability and $H_\infty$ . . . . .	186

9.2.4	Systems Containing Several Uncertain Matrices . . . . .	187
9.3	Quadratic Stabilizability . . . . .	189
9.3.1	Linear vs. Nonlinear Control . . . . .	189
9.3.2	Matching, Generalized Matching and Other Structural Conditions . . . . .	190
9.3.3	A Convex Parameterization of Linear Quadratically Stabilizing Controllers . . . . .	191
9.3.4	Systems Containing Uncertain Matrices . . . . .	192
9.4	Controllers Yielding Robustness in the Presence of Persistently Acting Disturbances . . . . .	194
9.4.1	Discontinuous Controllers . . . . .	194
9.4.2	Continuous Controllers . . . . .	195
9.5	Miscellaneous . . . . .	196
9.6	Acknowledgements . . . . .	196
10	Universal Controllers: Nonlinear Feedback and Adaptation . . . . .	205
	<i>Eugene P. Ryan</i>	
10.1	Introduction . . . . .	205
10.2	Class I: Universal Adaptive Stabilizer . . . . .	207
10.2.1	Coordinate transformation . . . . .	208
10.2.2	Adaptive Feedback Strategy . . . . .	209
10.2.3	Stability Analysis . . . . .	211
10.3	Class II: Nonlinearly Perturbed Linear Systems and Tracking by Output Feedback . . . . .	214
10.3.1	Class of Reference Signals . . . . .	215
10.3.2	Coordinate Transformation . . . . .	216
10.3.3	Adaptive Output Feedback Strategy . . . . .	216
10.3.4	Stability Analysis . . . . .	217
10.4	Class III: Two-Input Systems . . . . .	218
10.4.1	Example . . . . .	221
11	Lyapunov Stabilization of a Class of Uncertain Affine Control Systems	227
	<i>David P. Goodall</i>	
11.1	Introduction . . . . .	227
11.2	Decomposition into Controlled and Uncontrolled Subsystems .	228
11.3	The Class of Uncertain Systems . . . . .	230
11.4	Subsystem Stabilization . . . . .	231
11.5	Proposed Class of Generalized Feedback Controls . . . . .	235
11.6	Global Attractive Manifold $\mathcal{M}$ . . . . .	237
11.7	Lyapunov Stabilization . . . . .	241
11.8	Example of Uncertain System Stabilization via Discontinuous Feedback . . . . .	243

12 The Role of Morse-Lyapunov Functions in the Design of Nonlinear Global Feedback Dynamics . . . . .	249
<i>Efthimios Kappos</i>	
12.1 Introduction . . . . .	249
12.2 Nonlinear Systems and Control Dynamics . . . . .	252
12.3 Morse Specifications . . . . .	255
12.4 Obstructions to Smooth Controllability . . . . .	258
12.4.1 Local Smooth Controllability . . . . .	259
12.4.2 Global Obstructions . . . . .	260
12.5 Some Special Cases . . . . .	263
12.5.1 Constant Control Distribution . . . . .	263
12.5.2 Constant-Rank Control Distribution of Dimension n-1 .	265
12.6 Conclusions . . . . .	266
13 Polytopic Coverings and Robust Stability Analysis via Lyapunov Quadratic Forms . . . . .	269
<i>Francesco Amato, Franco Garofalo and Luigi Glielmo</i>	
13.1 Introduction . . . . .	269
13.2 Some Applications of Polytopic Coverings to the Robust Stability Problem . . . . .	271
13.2.1 Systems Subject to Time-Varying Parameters . . . . .	271
13.2.2 Systems Subject to Slowly-Varying Parameters . . . . .	272
13.3 Polytopic Coverings: A Survey of the Existing Literature . . . . .	274
13.4 A More General Algorithm . . . . .	279
13.5 Examples . . . . .	283
13.5.1 Example 1 . . . . .	283
13.5.2 Example 2 . . . . .	284
13.6 Conclusions . . . . .	286
14 Model-Following VSC Using an Input-Output Approach . . . . .	289
<i>Giorgio Bartolini and Antonella Ferrara</i>	
14.1 Introduction . . . . .	289
14.2 Some Preliminary Issues . . . . .	291
14.3 The Underlying Linear Structure of the Controller . . . . .	294
14.4 Discontinuous Parameter Adjustment Mechanisms . . . . .	299
14.5 Pole Assignment via Discontinuous Identification of the Parameters of the Feedforward Filter . . . . .	302
14.6 Illustrative Examples . . . . .	305
14.7 Conclusions . . . . .	306
15 Combined Adaptive and Variable Structure Control . . . . .	313
<i>Alexander A. Stotsky</i>	
15.1 Introduction . . . . .	313
15.2 Problem Statement . . . . .	315
15.3 Direct Integral Adjustment Law . . . . .	317
15.4 Direct Integral and Pseudo-Gradient Adjustment Law . . . . .	319

15.5 Prediction Error Estimation and Indirect Algorithms . . . . .	323
15.5.1 Lyapunov Design . . . . .	323
15.5.2 Additional Relay Term . . . . .	324
15.5.3 Sliding Mode Approach . . . . .	325
15.5.4 Comparative Analysis of the Two Proposed Indirect Algorithms with Bounded Disturbances . . . . .	326
15.5.5 Convergence of the Parameters . . . . .	327
15.6 Combined Algorithms . . . . .	328
15.7 Combined Algorithms for SISO Plants . . . . .	329
15.8 Conclusions . . . . .	331
16 Variable Structure Control of Nonlinear Systems: Experimental Case Studies . . . . .	335
<i>D. Dan Cho</i>	
16.1 Introduction . . . . .	335
16.2 Fuel-Injection Control . . . . .	336
16.2.1 Importance of Analytic Control Methodology for Fuel Injection . . . . .	336
16.2.2 VSC Approach to the Synthesis of Fuel-Injection Control	340
16.2.3 Implementation and Test Track Results . . . . .	344
16.2.4 Discussions . . . . .	350
16.3 Magnetic Levitation Control . . . . .	350
16.3.1 Dynamics of Open-Loop Unstable Magnetic Levitation .	350
16.3.2 VSC Approach to Levitation Control: Robust and Chatter-Free Tracking . . . . .	353
16.3.3 Comparison with Classical Control . . . . .	357
16.3.4 Discussion . . . . .	361
16.4 Conclusions . . . . .	361
16.5 Acknowledgments . . . . .	362
17 Applications of VSC in Motion Control Systems . . . . .	365
<i>Ahmet Denker and Okyay Kaynak</i>	
17.1 Introduction . . . . .	365
17.2 Design of VSC Controllers . . . . .	366
17.3 Application to a Motion Control System . . . . .	367
17.4 Robustness at a Price: Chattering . . . . .	373
17.5 VSC Design for Robotic Manipulators . . . . .	375
17.5.1 Merging Sliding Mode and Self-Organizing Controllers .	377
17.5.2 SLIMSOC . . . . .	378
17.5.3 Simulation Results . . . . .	380
17.6 Conclusions . . . . .	382
18 VSC Synthesis of Industrial Robots . . . . .	389
<i>Karel Jezernik, Boris Cuk and Jože Harnik</i>	
18.1 Introduction . . . . .	389
18.2 Variable Structure Control Synthesis . . . . .	391

18.3 Estimation of the Disturbance . . . . .	393
18.4 Simulation Results . . . . .	396
18.5 Conclusions . . . . .	400
