

# Contents

<b>Introduction</b>	1
<b>1 The problem of output regulation</b>	
1.1 Introduction	5
1.2 Problem statement	7
1.3 Output regulation via full information	9
1.4 Output regulation via error feedback	13
1.5 A particular case	22
1.6 Well-posedness and robustness	26
1.7 The construction of a robust regulator	29
<b>2 Disturbance attenuation via <math>H_\infty</math>-methods</b>	
2.1 Introduction	37
2.2 Problem statement	44
2.3 A characterization of the $\mathcal{L}_2$ -gain of a linear system	45
2.4 Disturbance attenuation via full information	49
2.5 Disturbance attenuation via measured feedback	58
<b>3 Full information regulators</b>	
3.1 Problem statement	69
3.2 Time-dependent control strategies	72
3.3 Examples	76
3.4 Time-independent control strategies	79
3.5 The local case	79
<b>4 Nonlinear observers</b>	
4.1 Problem statement	83
4.2 Time-dependent observers	84
4.3 Error feedback regulators	88
4.4 Examples	92

<b>5 Nonlinear <math>H_\infty</math>-techniques</b>	
5.1 Introduction . . . . .	99
5.2 Construction of the saddle-point . . . . .	100
5.3 The local scenario . . . . .	103
5.4 Disturbance attenuation via linearization . . . . .	108
<b>A Matrix equations</b>	
A.1 Linear matrix equations . . . . .	113
A.2 Algebraic Riccati equations . . . . .	115
<b>B Invariant manifolds</b>	
B.1 Existence theorem . . . . .	127
B.2 Outflowing manifolds . . . . .	131
B.3 Asymptotic phase . . . . .	134
B.4 Convergence for $T \rightarrow \infty$ . . . . .	143
B.5 A special case . . . . .	150
B.6 Dichotomies and Lyapunov functions . . . . .	151
<b>C Hamilton-Jacobi-Bellman-Isaacs equation</b>	
C.1 Introduction . . . . .	153
C.2 Method of characteristics . . . . .	154
C.3 The equation of Isaacs . . . . .	156
C.4 The Hamiltonian version of Isaacs' equation . . . . .	160
<b>Bibliography</b> . . . . .	163
