1	Introduction	
1.1	Walks and the metric theory of ordinals	1
1.2	Summary of results	10
1.3	Prerequisites and notation	17
1.4	Acknowledgements	18
2	Walks on Countable Ordinals	
2.1	Walks on countable ordinals and their basic characteristics	19
2.2	The coherence of maximal weights	29
2.3	Oscillations of traces	40
2.4	The number of steps and the last step functions	47
3	Metric Theory of Countable Ordinals	
3.1	Triangle inequalities	55
3.2	Constructing a Souslin tree using ρ	58
3.3	A Hausdorff gap from ρ	63
3.4	A general theory of subadditive functions on ω_1	66
3.5	Conditional weakly null sequences based on subadditive functions	77
4	Coherent Mappings and Trees	
4.1	Coherent mappings	91
4.2	Lipschitz property of coherent trees	95
4.3	The global structure of the class of coherent trees	108
4.4	Lexicographically ordered coherent trees	124
4.5	Stationary C-lines	128
5	The Square-bracket Operation on Countable Ordinals	
5.1	The upper trace and the square-bracket operation	133
5.2	Projecting the square-bracket operation	139
5.3	Some geometrical applications of the square-bracket operation	144

5.4	A square-bracket operation from a special Aronszajn tree	152
5.5	A square-bracket operation from the complete binary tree	157
6	General Walks and Their Characteristics	
6.1	The full code and its application in characterizing Mahlo cardinals	161
6.2	The weight function and its local versions	174
6.3	Unboundedness of the number of steps	178
7	Square Sequences	
7.1	Square sequences and their full lower traces	187
7.2	Square sequences and local versions of ρ	195
7.3	Special square sequence and the corresponding function ρ	202
7.4	The function ρ on successors of regular cardinals	205
7.5	Forcing constructions based on ρ	213
7.6	The function ρ on successors of singular cardinals	220
8	The Oscillation Mapping and the Square-bracket Operation	
8.1	The oscillation mapping	233
8.2	The trace filter and the square-bracket operation	243
8.3	Projections of the square-bracket operation on accessible cardinals	251
8.4	Two more variations on the square-bracket operation	257
9	Unbounded Functions	
9.1	Partial square-sequences	271
9.2	Unbounded subadditive functions	273
9.3	Chang's conjecture and Θ_2	277
9.4	Higher dimensions and the continuum hypothesis	283
10	Higher Dimensions	
10.1	Stepping-up to higher dimensions	289
10.2	Chang's conjecture as a 3-dimensional Ramsey-theoretic statement	294
10.3	Three-dimensional oscillation mapping	298
10.4	Two-cardinal walks	305
	Bibliography	313
	Index	321
