0. Preface v

Chapter 1. Preliminary Results

1.0 Introduction 1
1.1 Basic Results from Set Theory 1
1.2 Various Classes of Functions 4
1.2.1 Semicontinuous functions 4
1.2.2 The classes C^n and A 9
1.3 Convex Functions 11
1.4 Integration Theory and Green's Theorem 15
1.4.1 The Lebesgue integral 15
1.4.2 Surface integrals 18
1.4.3 Domains and their frontier surfaces 21
1.4.4 Green's theorem 22
1.5 Harmonic Functions 25
1.5.1 Green's function and Poisson's integral 25
1.5.2 The maximum principle for harmonic functions 29
1.5.3 Analyticity 31
1.5.4 The problem of Dirichlet for a hyperball 31
1.5.5 The mean-value property 33
1.5.6 Harnack's inequality and Harnack's theorem 35
1.5.7 Conclusion 38

Chapter 2. Subharmonic Functions

2.0 Introduction 40
2.1 Definition and Simple Examples 40
2.2 Jensen's Inequality 42
2.3 Some Further Classes of Subharmonic Functions 46
2.4 The Maximum Principle 47
2.5 S.h. Functions and the Poisson Integral 49
2.6 Perron's Method and the Problem of Dirichlet 55
2.6.1 Harmonicity 56
2.6.2 Boundary behaviour 58
2.6.3 Conditions for regularity and construction of the barrier function 61
2.7 Convexity Theorems 63
2.7.1 Some applications 67
2.7.2 Harmonic extensions 70
2.8 Subordination 74

Chapter 3. Representation Theorems

3.0 Introduction 81
3.1 Measure and Integration 82
3.2 Linear Functionals 84
3.3 Construction of Lebesgue Measure and Integrals; (F. Riesz's Theorem) 88
3.4 Repeated Integrals and Fubini's Theorem 96
3.4.1 Convolution transforms 99
3.5 Statement and Proof of Riesz's Representation Theorem 104
3.5.4 Proof of Riesz's Theorem 112
3.6 Harmonic Measure 114
3.7 The Green's Function and the Poisson–Jensen Formula 119
3.8 Harmonic Extensions and Least Harmonic Majorants 123
3.9 Nevanlinna Theory 125
3.10 Bounded Subharmonic Functions in R^m 128

Chapter 4. Functions Subharmonic in Space

4.0 Introduction 136
4.1 The Weierstrass Representation Theorem 136
4.2 Hadamard's Representation Theorem 142
4.3 Relations Between $T(r)$ and B(r) 147
4.3.1 Two examples 149
4.4 Relations Between $N(r)$ and $T(r)$ 151
4.5 Functions of Order Less Than One 155
4.5.1 A sharp inequality connecting $N(r)$ and $B(r)$ 157
4.5.3 The sharp bound for $\delta(u)$; statement of results 161
4.5.4 Proof of theorem 4.9 166
4.5.5 Proof of theorem 4.10 169
4.6 Tracts and Asymptotic Values 170
4.6.1 Preliminary results 171
4.6.3 Components $C(K)$ in domains 176
4.6.4 Tracts and growth 183
4.6.5 Iversen's Theorem 185
4.6.6 Construction of an asymptotic path 187
4.6.7 Growth on asymptotic paths 192
4.6.8 Three examples 196

Chapter 5. Capacity and Null Sets

5.0 Introduction 201
5.1 Potentials and α-capacity 201
5.1.1 Weak convergence 205
5.2 Conductor Potentials and Capacity 208
5.2.1 The nature of the conductor potential 211
5.3 Polar Sets 216
5.4 Capacity and Hausdorff Measure 220
5.4.1 The main comparison theorems 225
5.4.2 An application to bounded regular functions 229

5.5 The Extended Maximum or Phragmén–Lindelöf Principle . . . 232
5.5.1 Uniqueness of the conductor potential 235
5.5.2 Polar sets as null sets 237
5.6 Polar Sets and the Problem of Dirichlet 239
5.7 Generalized Harmonic Extensions and Green's Function . . . 246
5.7.1 Harmonic extensions 247
5.7.2 The generalized Green's function 249
5.7.3 The symmetry property of the Green's function . . . 255
5.7.4 The extended Green's function and the Poisson–Jensen formula 256
5.8 Capacitability and Strong Subadditivity 258
5.8.1 Strong subadditivity 259
5.8.2 Outer capacities 263
5.8.3 Capacitability 269
5.9 Sets where s.h. Functions Become Infinite 273
