Contents

Preface vii

1 Dynamics of First Order Difference Equations 1

1.1 Introduction 1

1.2 Linear First Order Difference Equations 2

1.2.1 Important Special Cases 4

1.3 Equilibrium Points 8

1.3.1 The Stair Step (Cobweb) Diagrams 15

1.3.2 The Cobweb Theorem of Economics 20

1.4 Criteria for Asymptotic Stability of Equilibrium Points 24

1.5 Periodic Points and Cycles 31

1.6 The Logistic Equation and Bifurcation 38

1.6.1 Equilibrium Points (Fixed Points of $F\mu$) 38

1.6.2 2 Cycles 38

1.6.3 2^2 Cycles 42

1.6.4 The Bifurcation Diagram 42

2 Linear Difference Equations of Higher Order 49

2.1 Difference Calculus 49

2.1.1 The Power Shift 51

2.1.2 Factorial Polynomials 52

2.1.3 The Antidifference Operator 53

2.2 General Theory of Linear Difference Equations 56

2.3 Linear Homogeneous Equations with Constant Coefficients . . . 67

2.4 Linear Nonhomogeneous Equations: Method of Undetermined Coefficients . . . 75
2.4.1 The Method of Variation of Constants (Parameters) . . . 81
2.5 Limiting Behavior of Solutions . . . 83
2.6 Nonlinear Equations Transformable to Linear Equations . . . 91
2.7 Applications . . . 97
2.7.1 Propagation of Annual Plants [1] . . . 97
2.7.2 Gambler's Ruin . . . 100
2.7.3 National Income [2, 3] . . . 101
2.7.4 The Transmission of Information [4] . . . 103

3 Systems of Difference Equations **113**
3.1 Autonomous (Time-Invariant) Systems . . . 113
3.1.1 The Discrete Analogue of the Putzer Algorithm . . . 114
3.1.2 The Development of the Algorithm for A^n . . . 115
3.2 The Basic Theory . . . 120
3.3 The Jordan Form: Autonomous (Time-Invariant) Systems Revisited 129
3.4 Linear Periodic Systems . . . 144
3.5 Applications . . . 149
3.5.1 Markov Chains . . . 149
3.5.2 Regular Markov Chains . . . 151
3.5.3 Absorbing Markov Chains . . . 153
3.5.4 A Trade Model [4] . . . 155
3.5.5 The Heat Equation . . . 157

4 Stability Theory **163**
4.1 Preliminaries . . . 163
4.2 Stability of Linear Systems . . . 172
4.3 Scalar Equations . . . 180
4.4 Phase Space Analysis . . . 185
4.5 Stability by Linear Approximation . . . 196
4.6 Liapunov's Direct or Second Method . . . 204

5 The Z-Transform Method **221**
5.1 Definitions and Examples . . . 221
5.1.1 Properties of the Z Transform . . . 225
5.2 The Inverse Z Transform and Solutions of Difference Equations 230
5.2.1 The Power Series Method . . . 230
5.2.2 The Partial Fraction Method . . . 231
5.2.3 The Inversion Integral Method[1] . . . 234
5.3 Volterra Difference Equations of Convolution Type: The Scalar Case 239
5.4 Explicit Criteria for Stability of Volterra Equations . . . 243
5.5 Volterra Systems . . . 247
5.6 A Variation of Constants Formula . . . 250
5.7 The Z Transform Versus Laplace Transform . . . 254

6 Control Theory **259**
6.1 Introduction 259
6.1.1 Discrete Equivalents for Continuous Systems 261
6.2 Controllability 262
6.2.1 Controllability Canonical Forms 268
6.3 Observability 274
6.3.1 Observability Canonical Forms 281
6.4 Stabilization by State Feedback (Design via Pole Placement) . . 284
6.4.1 Stabilization of Nonlinear Systems by Feedback 291
6.5 Observers 294
6.5.1 Eigenvalue Separation Theorem 295

7 Asymptotic Behavior of Difference Equations **303**
7.1 Tools of Approximation 303
7.2 Poincaré's Theorem 309
7.3 Second Order Difference Equations 318
7.4 Asymptotically Diagonal Systems 326
7.5 High Order Difference Equations 335
7.6 Nonlinear Difference Equations 343

8 Oscillation Theory **351**
8.1 Three-Term Difference Equations 351
8.2 Nonlinear Difference Equations 357
8.3 Self-Adjoint Second Order Equations 361

Answers to Selected Problems **371**

Index **383**
