Foreword	ix
A Quick Start ...	xi
I Background	1
1 Proof Machines	3
1.1 Evolution of the province of human thought	3
1.2 Canonical and normal forms	7
1.3 Polynomial identities	8
1.4 Proofs by example?	9
1.5 Trigonometric identities	11
1.6 Fibonacci identities	12
1.7 Symmetric function identities	12
1.8 Elliptic function identities	13
2 Tightening the Target	17
2.1 Introduction	17
2.2 Identities	21
2.3 Human and computer proofs; an example	23
2.4 A Mathematica session	27
2.5 A Maple session	29
2.6 Where we are and what happens next	30
2.7 Exercises	31
3 The Hypergeometric Database	33
3.1 Introduction	33
3.2 Hypergeometric series	34
3.3 How to identify a series as hypergeometric	35
3.4 Software that identifies hypergeometric series	39

3.5	Some entries in the hypergeometric database	42
3.6	Using the database	44
3.7	Is there really a hypergeometric database?	48
3.8	Exercises	50
II	The Five Basic Algorithms	53
4	Sister Celine's Method	55
4.1	Introduction	55
4.2	Sister Mary Celine Fasenmyer	57
4.3	Sister Celine's general algorithm	58
4.4	The Fundamental Theorem	64
4.5	Multivariate and "q" generalizations	70
4.6	Exercises	72
5	Gosper's Algorithm	73
5.1	Introduction	73
5.2	Hypergeometrics to rationals to polynomials	75
5.3	The full algorithm: Step 2	79
5.4	The full algorithm: Step 3	84
5.5	More examples	86
5.6	Similarity among hypergeometric terms	91
5.7	Exercises	95
6	Zeilberger's Algorithm	101
6.1	Introduction	101
6.2	Existence of the telescoped recurrence	104
6.3	How the algorithm works	106
6.4	Examples	109
6.5	Use of the programs	112
6.6	Exercises	118
7	The WZ Phenomenon	121
7.1	Introduction	121
7.2	WZ proofs of the hypergeometric database	126
7.3	Spinoffs from the WZ method	127
7.4	Discovering new hypergeometric identities	135
7.5	Software for the WZ method	137
7.6	Exercises	140

8	Algorithm Hyper	141
8.1	Introduction	141
8.2	The ring of sequences	144
8.3	Polynomial solutions	148
8.4	Hypergeometric solutions	151
8.5	A Mathematica session	156
8.6	Finding all hypergeometric solutions	157
8.7	Finding all closed form solutions	158
8.8	Some famous sequences that do not have closed form	159
8.9	Inhomogeneous recurrences	161
8.10	Factorization of operators	162
8.11	Exercises	164
III	Epilogue	169
9	An Operator Algebra Viewpoint	171
9.1	Early history	171
9.2	Linear difference operators	172
9.3	Elimination in two variables	177
9.4	Modified elimination problem	180
9.5	Discrete holonomic functions	184
9.6	Elimination in the ring of operators	185
9.7	Beyond the holonomic paradigm	185
9.8	Bi-basic equations	187
9.9	Creative anti-symmetrizing	188
9.10	Wavelets	190
9.11	Abel-type identities	191
9.12	Another semi-holonomic identity	193
9.13	The art	193
9.14	Exercises	195
A	The WWW sites and the software	197
A.1	The Maple packages EKHAD and qEKHAD	198
A.2	Mathematica programs	199
	Bibliography	201
	Index	208
