PREFACE	xi
1 SECOND ORDER SCALAR DIFFERENCE EQUATIONS	1
1.1 Difference Equations and Recurrence Relations	1
1.2 Second Order Scalar Equations as Symplectic Systems	4
1.3 Wronskians of Solutions	9
1.4 Prepared Solutions	10
1.5 Generalized Zeros of Solutions	11
1.6 Disconjugacy and the Reid Roundabout Theorem	12
1.7 Disfocality	36
1.8 Comparison Theorems for Disfocality	39
1.9 Notes	43
2 CONTINUED FRACTIONS	45
2.1 The Scalar Case	45
2.2 Scalar Symplectic Continued Fractions	53
2.3 Companion Matrices	55
2.4 Symplectic C.F.s versus Companion Matrix C.F.s	58
2.5 Ratios of Bessel Functions	60
2.6 Matrix Continued Fractions	61
2.7 Continued Fractions in a Normed Ring	67
2.8 Notes	69
3 SYMPLECTIC SYSTEMS	71
3.1 Linear Systems and the Lagrange Identity	71
3.2 Symplectic Matrices	73

3.3	Solutions of Symplectic Systems	76
3.4	Discrete Linear Hamiltonian Systems	82
3.5	Even Order Difference Equations as Systems	85
3.6	Discrete Jacobi Equations	91
3.7	Discrete Wronskians – Liouville’s Theorem	93
3.8	Prepared Families – Lagrangian Subspaces	96
3.9	Linear Independence and the Wronskian Test	101
3.10	Reduction of Order	105
3.11	Dominant and Recessive Solutions	113
3.12	The Normal Basis Theorem	119
3.13	The Connection Theorem	125
3.14	Essential Uniqueness of Recessive Solutions	130
3.15	Asymptotic Behavior of Solutions	132
3.16	The Olver–Reid Construction	133
3.17	Associated Riccati Equations	135
3.18	Transformations of Symplectic Systems	144
3.19	Discrete Floquet Theory	145
3.20	Exponential Dichotomies	146
3.21	Periodic Symplectic Systems	149
3.22	Notes	150
4	DISCRETE VARIATIONAL THEORY	153
4.1	The Discrete Variational Problem	153
4.2	The Second Variation	160
4.3	Legendre’s Necessary Condition	163
4.4	Discrete Hamiltonian Systems	165
4.5	Higher Order Difference Equations	168
4.6	Disconjugacy and Generalized Zeros	172
4.7	Variable Step Variational Problems	183
4.8	Discrete Hamiltonian Systems Yield Symplectic Integrators	189
4.9	Existence and Uniqueness of Local Solutions of Discrete Hamiltonian Systems	191
4.10	Notes	197

5	SYMMETRIC THREE TERM RECURRENCE RELATIONS	199
5.1	A Discrete Reid Roundabout Theorem	199
5.2	Discrete Legendre Conditions	213
5.3	A Sturmian Comparison Theorem	215
5.4	Prepared Bases	216
5.5	An Associated Bilinear Form	218
5.6	A Discrete Sturm Separation Theorem	221
5.7	Discrete Jacobi Conditions	226
5.8	Reduction of Order	228
5.9	Backwards Reduction of Order	231
5.10	Dominant and Recessive Solutions	233
6	DISCRETE RICCATI EQUATIONS FOR THREE TERM RECURRENCES	263
6.1	A Riccati Equation for $\mathcal{L}U = 0$.	263
6.2	Distinguished Solutions of Riccati Equations	269
6.3	Periodic Coefficient Riccati Equations	270
6.4	Constant Coefficient Riccati Equations	271
6.5	The Characteristic Equation	273
6.6	Minimality of the Distinguished Solution at ∞	275
6.7	The Reverse Riccati Equation	278
6.8	Upper Solutions of the Reverse Riccati Equation	285
7	GREEN'S FUNCTIONS FOR NONHOMOGENEOUS SECOND ORDER DIFFERENCE EQUATIONS	295
7.1	Introduction	295
7.2	Variation of Constants Formula	295
7.3	The Green's Matrix Function for the Conjugate Problem	298
7.4	Green's matrix function for the right focal BVP	303
7.5	A Green's Matrix Function for a General Two-Point BVP	308
7.6	Notes	317

8	DISCONJUGACY CRITERIA	319
8.1	Introduction	319
8.2	A Sufficient Condition for Disconjugacy	319
8.3	A Sufficient Condition for Right Disfocality	326
8.4	Notes	329
9	DISCRETE LINEAR HAMILTONIAN SYSTEMS	331
9.1	Preliminaries	331
9.2	The Moore–Penrose Inverse	337
9.3	The Quadratic Form	343
9.4	Notes	356
	REFERENCES	357
	INDEX	371
