

# CONTENTS.

## CHAPTER I.

### FUNDAMENTAL IDEAS.

	Page
1. Difference equations .....	1
2. Periodic functions. Summation .....	3
3. Fundamental systems of solutions. General solution .....	6
4. Homogeneous equations with constant coefficients .....	10
5. Non-homogeneous equations .....	13
6. Asymptotic representation .....	16
7. The function $\Phi(x, r, k)$ .....	23
Exercises .....	30

## CHAPTER II.

### EQUATIONS OF THE FIRST ORDER. THE GAMMA FUNCTION.

1. Homogeneous equations .....	32
2. The gamma function .....	41
3. Applications of the gamma function. Allied functions .....	53
A. Explicit solution of eq. (38) .....	53
B. Summation of rational functions. The function $\Psi(x)$ .....	54
C. Asymptotic forms of $\Psi(x)$ and $\Phi(x, l, k)$ .....	56
D. The beta function .....	58
4. The general equation of the first order .....	61
Exercises .....	66

## CHAPTER III.

### THE HYPERGEOMETRIC EQUATION: GENERAL CASE.

1. The hypergeometric difference equation .....	68
2. Formal power series solutions .....	69
3. The use of matrices .....	71
4. First existence theorem .....	74
5. The intermediate solutions .....	82
6. The principal solutions .....	85
7. Integral and series solutions .....	94
8. Relations between the solutions. The fundamental periodic functions .....	109
9. Asymptotic forms .....	117
10. Reducible equations .....	121
11. The Riemann problem .....	125

## CHAPTER IV.

### THE HYPERGEOMETRIC EQUATION: IRREGULAR CASES.

1. The case $q_2 = 0$ .....	127
2. Infinite roots .....	158
3. The case $q_1 = q_2$ .....	175
4. The case $q_1 = q_2 = 0$ .....	193
