

CONTENTS.

Chapter I. On Operations.

§ 1.	Historical and Bibliographical Notes	1
§ 2.	Definition of differences	2
§ 3.	Operation of displacement	5
§ 4.	Operation of the mean	6
§ 5.	Symbolical Calculus	7
§ 6.	Symbolical methods	8
§ 7.	Receding Differences	14
§ 8.	Central Differences	15
§ 9.	Divided Differences	18
§ 10.	Generating functions	20
§ 11.	General rules to determine generating functions	25
§ 12.	Expansion of functions into power series	29
§ 13.	Expansion of function by aid of decomposition into partial fractions	34
§ 14.	Expansion of functions by aid of complex integrals	40
§ 15.	Expansion of a function by aid of difference equations	41

Chapter II. Functions important in the Calculus of Finite Differences.

§ 16.	The Factorial	45
§ 17.	The Gamma function	53
§ 18.	Incomplete Gamma function	56
§ 19.	The Digamma function	58
§ 20.	The Trigamma function	60
§ 21.	Expansion of $\log \Gamma(x+1)$ into a power series	61
§ 22.	The Binomial coefficient	62
§ 23.	Expansion of a function into a series of binomial coefficients	74

§ 24. Beta-functions	80
§ 25. Incomplete Beta-functions	83
§ 26. Exponential functions	87
§ 27. Trigonometric functions	88
§ 28. Alternate functions	92
§ 29. Functions whose differences or means are equal to zero	94
§ 30. Product of two functions. Differences	94
§ 31. Product of two functions. Means	98

Chapter III. Inverse Operation of Differences and Means. Sums.

§ 32. Indefinite sums	100
§ 33. Indefinite sum obtained by inversion	103
§ 34. Indefinite sum obtained by summation by parts	105
§ 35. Summation by parts of alternate functions	108
§ 36. Indefinite sums determined by difference equations	109
§ 37. Differences, sums and means of infinite series	110
§ 38. Inverse operation of the mean	111
§ 39. Other methods of obtaining inverse means	113
§ 40. Sums	116
§ 41. Sums determined by indefinite sums	117
§ 42. Sum of reciprocal factorials by indefinite sums	121
§ 43. Sums of exponential and trigonometric functions	123
§ 44. Sums of other Functions	129
§ 45. Determination of sums by symbolical formulae	131
§ 46. Determination of sums by generating functions	136
§ 47. Determination of sums by geometrical considerations	138
§ 48. Determination of sums by the Calculus of Probability	140
§ 49. Determination of alternate sums starting from usual sums	140

Chapter IV. Stirling's Numbers.

§ 50. Expansion of factorials into power series. Stirling's numbers of the <i>first kind</i>	142
§ 51. Determination of the Stirling numbers starting from their definition	145
§ 52. Resolution of the difference equations	147

§ 53. Transformation of a multiple sum "without repetition" into sums without restriction	153
§ 54. Stirling's numbers expressed by sums. Limits	159
§ 55. Application of the Stirling numbers of the first kind	163
§ 56. Derivatives expressed by differences	164
§ 57. Stirling numbers of the first kind obtained by probability	166
§ 58. Stirling numbers of the <i>second kind</i>	168
§ 59. Limits of expressions containing Stirling numbers of the second kind	173
§ 60. Generating functions of the Stirling numbers of the second kind	174
§ 61. Stirling numbers of the second kind obtained by probability	177
§ 62. Decomposition of products of prime numbers into factors	179
§ 63. Application of the expansion of powers into series of factorials	181
§ 64. Formulae containing Stirling numbers of both kinds	182
§ 65. Inversion of sums and series. Sum equations	183
§ 66. Deduction of certain formulae containing Stirling numbers	185
§ 67. Differences expressed by derivatives	189
§ 68. Expansion of a reciprocal factorial into a series of reciprocal powers and vice versa	192
§ 69. The operation Θ	195
§ 70. The operation Ψ	199
§ 71. Operations $\Delta^m \mathbf{D}^{-m}$ and $\mathbf{D}^m \Delta^{-m}$	200
§ 72. Expansion of a function of function by aid of Stirling numbers. Semi-invariants of Thiele	204
§ 73. Expansion of a function into reciprocal factorial series and into reciprocal power series	212
§ 74. Expansion of the function $1/y^n$ into a series of powers of x	216
§ 75. Changing the origin of the intervals	219
§ 76. Changing the length of the interval	220
§ 77. Stirling's polynomials	224

Chapter V. Bernoulli Polynomials and Numbers.

§ 78. Bernoulli polynomials of the <i>first kind</i>	230
§ 79. Particular cases of the Bernoulli polynomials	236
§ 80. Symmetry of the Bernoulli polynomials	238
§ 81. Operations performed on the Bernoulli polynomial	240
§ 82. Expansion of the Bernoulli polynomial into a Fourier series. Limits. Sum of reciprocal power series	242
§ 83. Application of the Bernoulli polynomials	246
§ 84. Expansion of a polynomial into Bernoulli polynomials	248
§ 85. Expansion of functions into Bernoulli polynomials. Generating functions	250
§ 86. Raabe's multiplication theorem of the Bernoulli polynomials	252
§ 87. The Bernoulli series	253
§ 88. The Maclaurin-Euler summation formula	260
§ 89. Bernoulli polynomials of the <i>second kind</i>	265
§ 90. Symmetry of the Bernoulli polynomials of the second kind	268
§ 91. Extrema of the polynomials	269
§ 92. Particular cases of the polynomials	272
§ 93. Limits of the numbers b_n and of the polynomials $\psi_n(\mathbf{x})$	272
§ 94. Operations on the Bernoulli polynomials of the second kind	275
§ 95. Expansion of the Bernoulli polynomials of the second kind	276
§ 96. Application of the polynomials	277
§ 97. Expansion of a polynomial into a series of Bernoulli polynomials of the second kind	277
§ 98. The Bernoulli series of the second kind	280
§ 99. Gregory's summation formula	284

Chapter VI. Euler's and Boole's polynomials. Sums of reciprocal powers.

§ 100. <i>Euler's</i> polynomials	288
§ 101. Symmetry of the Euler polynomials	292
§ 102. Expansion of the Euler polynomials into a series of Bernoulli polynomials of the first kind	295

§ 103. Operations on the Euler polynomials	296
§ 104. The Tangent-coefficients	298
§ 105. Euler numbers	300
§ 106. Limits of the Euler polynomials and numbers	302
§ 107. Expansion of the Euler polynomials into Fourier series	303
§ 108. Application of the Euler polynomials	306
§ 109. Expansion of a polynomial into a series of Euler polynomials	307
§ 110. Multiplication theorem of the Euler polynomials	311
§ 111. Expansion of a function into an Euler series	313
§ 112. Boole's first summation formula	315
§ 113. <i>Boole's</i> polynomials	317
§ 114. Operations on the Boole polynomials. Differences	320
§ 115. Expansion of the Boole polynomials into a series of Bernoulli polynomials of the second kind	321
§ 116. Expansion of a function into Boole polynomials	322
§ 117. Boole's second summation formula	323
§ 118. Sums of reciprocal powers. Sum of $1/x$ by aid of the digamma function	325
§ 119. Sum of $1/x^2$ by aid of the trigamma function	330
§ 120. Sum of a rational fraction	335
§ 121. Sum of reciprocal powers. Sum of $1/x^n$	338
§ 122. Sum of alternate reciprocal powers by the $\beta_1(x)$ function	347

*Chapter VII. Expansion of Functions, Interpolation,
Construction of Tables.*

§ 123. Expansion of a Function into a series of polynomials	355
§ 124. The Newton series	357
§ 125. Interpolation by aid of Newton's Formula and Construction of Tables	360
§ 126. Inverse interpolation by Newton's formula	366
§ 127. Interpolation by the Gauss series	368
§ 128. The Bessel and the Stirling series	373
§ 129. Everett's formula	376
§ 130. Inverse interpolation by Everett's formula	381
§ 131. Lagrange's interpolation formula	385

§ 132. Interpolation formula without printed differences. Remarks on the construction of tables	390
§ 133. Inverse Interpolation by aid of the formula of the preceding paragraph	411
§ 134. Precision of the interpolation formulae	417
§ 135. General Problem of Interpolation	420

Chapter VIII. Approximation and Graduation.

§ 136. Approximation according to the principle of moments	422
§ 137. Examples of function chosen	426
§ 138. Expansion of a Function into a series of Legendre's polynomials	434
§ 139. Orthogonal polynomials with respect to $x=x_0$, x_1, \dots, x_{N-1}	426
§ 140. Mathematical properties of the orthogonal poly- nomials	442
§ 141. Expansion of a function into a series of orthogonal polynomials	447
§ 142. Approximation of a function given for $\xi=0, 1, 2, \dots$, $N-1$	451
§ 143. Graduation by the method of least squares	456
§ 144. Computation of the binomial moments	460
§ 145. Fourier series	463
§ 146. Approximation by trigonometric functions of dis- continuous variables	465
§ 147. Hermite polynomials	467
§ 148. G. polynomials	473

*Chapter IX. Numerical resolution of equations. Numerical
integration.*

§ 149. Method of False Position. Regula Falsi	486
§ 150. The Newton-Raphson method	489
§ 151. Method of Iteration	492
§ 152. Daniel Bernoulli's method	494
§ 153. The Ch'in-Vieta-Horner method	496
§ 154. Root-squaring method. Dandelin, Lobatchevsky, Graeffe	503

§ 155. Numerical Integration	512
§ 156. Hardy and Weddle's formulae	516
§ 157. The Gauss-Legendre method	517
§ 158. Tchebichef's formula	519
§ 159. Numerical integration of functions expanded into a series of their differences	524
§ 160. Numerical resolution of differential equations	527

Chapter X. Functions of several independent variables.

§ 161. Functions of two variables	530
§ 162. Interpolation in a double entry table	532
§ 163. Functions of three variables	541

Chapter XI. Difference Equations.

§ 164. Genesis of difference equations	543
§ 165. Homogeneous linear difference equations, constant coefficients	545
§ 166. Characteristic equations with multiple roots	549
§ 167. Negative roots	552
§ 168. Complex roots	554
§ 169. Complete linear equations of differences with constant coefficients	557
§ 170. Determination of the particular solution in the general case	564
§ 171. Method of the arbitrary constants	569
§ 172. Resolution of linear equations of differences by aid of generating functions	572
§ 173. Homogeneous linear equations of the first order with variable coefficients	576
§ 174. Laplace's method for solving linear homogeneous difference equations with variable coefficients	579
§ 175. Complete linear equations of differences of the first order with variable coefficients	583
§ 176. Reducible linear equations of differences with va- riable coefficients	584
§ 177. Linear equations of differences whose coefficients are polynomials of x , solved by the method of generating functions	586

§ 178.	André's method for solving difference equations	587
§ 179.	Sum equations which are reducible to equations of differences	599
§ 180.	Simultaneous linear equations of differences with constant coefficients	600

Chapter XIII. Equations of Partial Differences.

§ 181.	Introduction	604
§ 182.	Resolution of linear equations of partial differences with constant coefficients by Laplace's method of generating functions	607
§ 183.	Boole's symbolical method for solving equations of partial differences	616
§ 184.	Method of Fourier, Lagrange, and Ellis for solving equations of partial differences	619
§ 185.	Homogeneous linear equations of mixed differences	632
§ 186.	Difference equations of three independent variables	633
§ 187.	Differences equations of four independent variables	638
