
Contents

Preface	vii
Chapter 1. Background Material	1
1.1 Riemannian Geometry	1
1.2 Basics in Nonlinear Analysis	7
Chapter 2. The Model Equations	13
2.1 Palais-Smale Sequences	14
2.2 Strong Solutions of Minimal Energy	17
2.3 Strong Solutions of High Energies	19
2.4 The Case of the Sphere	23
Chapter 3. Blow-up Theory in Sobolev Spaces	25
3.1 The H_1^2 -Decomposition for Palais-Smale Sequences	26
3.2 Subtracting a Bubble and Nonnegative Solutions	32
3.3 The De Giorgi–Nash–Moser Iterative Scheme for Strong Solutions	45
Chapter 4. Exhaustion and Weak Pointwise Estimates	51
4.1 Weak Pointwise Estimates	52
4.2 Exhaustion of Blow-up Points	54
Chapter 5. Asymptotics When the Energy Is of Minimal Type	67
5.1 Strong Convergence and Blow-up	68
5.2 Sharp Pointwise Estimates	72
Chapter 6. Asymptotics When the Energy Is Arbitrary	83
6.1 A Fundamental Estimate: 1	88
6.2 A Fundamental Estimate: 2	143
6.3 Asymptotic Behavior	182
Appendix A. The Green's Function on Compact Manifolds	201
Appendix B. Coercivity Is a Necessary Condition	209
Bibliography	213
