Preface	vii
Notation	ix
1. Preliminary Results	1
1.1. Functional Analysis	1
1.2. Integration	3
1.3. Sobolev Spaces	6
1.4. Sobolev and Besov Spaces on \mathbb{R}^N	12
1.5. Elliptic Equations	15
1.6. Semigroups of Linear Operators	18
1.7. Some Compactness Tools	20
2. The Linear Schrödinger Equation	29
2.1. Basic Properties	29
2.2. Fundamental Properties in \mathbb{R}^N	30
2.3. Strichartz's Estimates	33
2.4. Strichartz's Estimates for Nonadmissible Pairs	40
2.5. Space Decay and Smoothing Effect in \mathbb{R}^N	41
2.6. Homogeneous Data in \mathbb{R}^N	43
2.7. Comments	51
3. The Cauchy Problem in a General Domain	55
3.1. The Notion of Solution	55
3.2. Some Typical Nonlinearities	58
3.3. Local Existence in the Energy Space	63
3.4. Energy Estimates and Global Existence	74
3.5. The Nonlinear Schrödinger Equation in One Dimension	77
3.6. The Nonlinear Schrödinger Equation in Two Dimensions	78
3.7. Comments	80
4. The Local Cauchy Problem	83
4.1. Outline	83
4.2. Strichartz's Estimates and Uniqueness	84
4.3. Local Existence in $H^1(\mathbb{R}^N)$	92
4.4. Kato's Method	93
4.5. A Critical Case in $H^1(\mathbb{R}^N)$	103
4.6. L^2 Solutions	109
4.7. A Critical Case in $L^2(\mathbb{R}^N)$	115
4.8. H^2 Solutions	119
4.9. H^s Solutions, $s < N/2$	125
4.10. H^m Solutions, $m > N/2$	134

4.11.	The Cauchy Problem for a Nonautonomous Schrödinger Equation	138
4.12.	Comments	143
5.	Regularity and the Smoothing Effect	147
5.1.	H^s Regularity, $0 < s < \min\{1, N/2\}$	147
5.2.	H^1 Regularity	149
5.3.	H^2 Regularity	152
5.4.	H^m Regularity, $m > N/2$	154
5.5.	Arbitrary Regularity	155
5.6.	The C^∞ Smoothing Effect	156
5.7.	Comments	160
6.	Global Existence and Finite-Time Blowup	163
6.1.	Energy estimates and Global Existence	163
6.2.	Global Existence for Small Data	165
6.3.	Global Existence for Oscillating Data	167
6.4.	Global Existence for Asymptotically Homogeneous Initial Data	171
6.5.	Finite-Time Blowup	178
6.6.	The Critical Case: Sharp Existence and Blowup Results	196
6.7.	The Pseudoconformal Transformation and Applications	204
6.8.	Comments	208
7.	Asymptotic Behavior in the Repulsive Case	211
7.1.	Basic Notions of Scattering Theory	211
7.2.	The Pseudoconformal Conservation Law	213
7.3.	Decay of Solutions in the Weighted L^2 Space	215
7.4.	Scattering Theory in the Weighted L^2 Space	220
7.5.	Applications of the Pseudoconformal Transformation	224
7.6.	Morawetz's Estimate	233
7.7.	Decay of Solutions in the Energy Space	239
7.8.	Scattering Theory in the Energy Space	246
7.9.	Comments	249
8.	Stability of Bound States in the Attractive Case	255
8.1.	Nonlinear Bound States	255
8.2.	An Instability Result	269
8.3.	A Stability Result	274
8.4.	Comments	280
9.	Further Results	283
9.1.	The Nonlinear Schrödinger Equation with a Magnetic Field	283
9.2.	The nonlinear Schrödinger Equation with a Quadratic Potential	287
9.3.	The Logarithmic Schrödinger Equation	291
9.4.	Existence of Weak Solutions for Large Nonlinearities	299
9.5.	Comments	303
	Bibliography	305
