

# Contents

Preface		vii
1.	Introduction	1
2.	Classical Methods of System Identification	6
3.	Off-Line Methods for System Identification	27
4.	On-Line Identification of Discrete-Time Systems	51
5.	Linear Multivariable Systems	76
6.	Stochastic Modeling	105
7.	Identification of a Closed-Loop System	121
8.	Reduction of High-Order Systems	133
9.	Combined State and Parameter Estimation	156
10.	Distributed Parameter Systems	164
11.	Identification of Nonlinear Systems	193
12.	Design of Optimal Input Signal	228
13.	Determination of the Order and Structure	260
14.	Diagnostic Tests and Model Validation	275
15.	Concluding Remarks	285
Appendix I.	The Matrix Pseudoinverse	289
Appendix II.	Transformation of a Matrix to the Hermite Normal Form	300
Appendix III.	Fixed Point of Nonlinear Integral Equation	310
Appendix IV.	The Method of Weighted Residuals (MWR)	314
Appendix V.	Bifurcation Solution of Nonlinear Operator	325
Appendix VI.	Attractors for Differential Equations	330
Index		333
