

Contents

PART I: Dimension One

Chapter 1. Scalar Autonomous Equations

1.1. Existence and Uniqueness	4
1.2. Geometry of Flows	8
1.3. Stability of Equilibria	16
1.4. Equations on a Circle	21

Chapter 2. Elementary Bifurcations

2.1. Dependence on Parameters – Examples	26
2.2. The Implicit Function Theorem	41
2.3. Local Perturbations Near Equilibria	42
2.4. An Example on a Circle	54
2.5. Computing Bifurcation Diagrams	56
2.6. Equivalence of Flows	61

Chapter 3. Scalar Maps

3.1. Euler's Algorithm and Maps	68
3.2. Geometry of Scalar Maps	72
3.3. Bifurcations of Monotone Maps	81
3.4. Period-doubling Bifurcation	87
3.5. An Example: The Logistic Map	92

PART II: Dimension One and One Half

Chapter 4. *Scalar Nonautonomous Equations*

4.1. General Properties of Solutions	108
4.2. Geometry of Periodic Equations	113
4.3. Periodic Equations on a Cylinder	118
4.4. Examples of Periodic Equations	122
4.5. Stability of Periodic Solutions	129

Chapter 5. *Bifurcation of Periodic Equations*

5.1. Bifurcations of Poincaré Maps	134
5.2. Stability of Nonhyperbolic Periodic Solutions	135
5.3. Perturbations of Vector Fields	141

Chapter 6. *On Tori and Circles*

6.1. Differential Equations on a Torus	148
6.2. Rotation Number	155
6.3. An Example: The Standard Circle Map	157

PART III: Dimension Two

Chapter 7. *Planar Autonomous Systems*

7.1. "Natural" Examples of Planar Systems	170
7.2. General Properties and Geometry	174
7.3. Product Systems	185
7.4. First Integrals and Conservative Systems	194
7.5. Examples of Elementary Bifurcations	204

Chapter 8. *Linear Systems*

8.1. Properties of Solutions of Linear Systems	218
8.2. Reduction to Canonical Forms	228
8.3. Qualitative Equivalence in Linear Systems	237
8.4. Bifurcations in Linear Systems	247
8.5. Nonhomogeneous Linear Systems	253
8.6. Linear Systems with 1-periodic Coefficients	256

Chapter 9. *Near Equilibria*

9.1. Asymptotic Stability from Linearization	266
9.2. Instability from Linearization	272

9.3. Liapunov Functions	277
9.4. An Invariance Principle	287
9.5. Preservation of a Saddle	292
9.6. Flow Equivalence Near Hyperbolic Equilibria	301
9.7. Saddle Connections	302
<i>Chapter 10. In the Presence of a Zero Eigenvalue</i>	
10.1. Stability	308
10.2. Bifurcations	314
10.3. Center Manifolds	321
<i>Chapter 11. In the Presence of Purely Imaginary Eigenvalues</i>	
11.1. Stability	334
11.2. Poincaré–Andronov–Hopf Bifurcation	344
11.3. Computing Bifurcation Curves	357
<i>Chapter 12. Periodic Orbits</i>	
12.1. Poincaré–Bendixson Theorem	366
12.2. Stability of Periodic Orbits	375
12.3. Local Bifurcations of Periodic Orbits	382
12.4. A Homoclinic Bifurcation	385
<i>Chapter 13. All Planar Things Considered</i>	
13.1. Structurally Stable Vector Fields	390
13.2. Dissipative Systems	394
13.3. One-parameter Generic Bifurcations	396
13.4. Bifurcations in the Presence of Symmetry	403
13.5. Local Two-parameter Bifurcations	405
<i>Chapter 14. Conservative and Gradient Systems</i>	
14.1. Second-order Conservative Systems	414
14.2. Bifurcations in Conservative Systems	425
14.3. Gradient Vector Fields	432
<i>Chapter 15. Planar Maps</i>	
15.1. Linear Maps	444
15.2. Near Fixed Points	454
15.3. Numerical Algorithms and Maps	462
15.4. Saddle Node and Period Doubling	468
15.5. Poincaré–Andronov–Hopf Bifurcation	473
15.6. Area-preserving Maps	484

PART IV: Higher Dimensions

Chapter 16. Dimension Two and One Half

16.1. Forced Van der Pol	498
16.2. Forced Duffing	501
16.3. Near a Transversal Homoclinic Point	504
16.4. Forced and Damped Duffing	506

Chapter 17. Dimension Three

17.1. Period Doubling	512
17.2. Bifurcation to Invariant Torus	514
17.3. Silnikov Orbits	515
17.4. The Lorenz Equations	519

Chapter 18. Dimension Four

18.1. Integrable Hamiltonians	524
18.2. A Nonintegrable Hamiltonian	531
