

# CONTENTS

<b>1</b>	<b>INTRODUCTION: THE FIRST-ORDER SYSTEM</b>	<b>1</b>
1.1	<i>Examples of first-order systems</i>	2
1.2	<i>The concept of state and properties related to states</i>	9
1.3	<i>Linearity, linearization, and time invariance</i>	13
1.4	<i>Mathematical properties of first-order systems</i>	28
1.5	<i>Introduction to stability</i>	32
1.6	<i>Discrete-time systems</i>	38
1.7	<i>Summary</i>	40
1.8	<i>Problems</i>	41
		<b>vii</b>

<b>2</b>	<b>SECOND-ORDER SYSTEMS</b>	<b>47</b>
2.1	<i>Examples of second-order systems and extension of the concept of state</i>	47
2.2	<i>Linearization of second-order state equations</i>	57
2.3	<i>Block diagrams and system representations</i>	60
2.4	<i>Solution of coupled first-order differential-state equations</i>	62
2.5	<i>The phase plane: a geometric analysis of second-order systems</i>	76
2.6	<i>Discrete-time systems</i>	85
2.7	<i>Summary</i>	86
2.8	<i>Problems</i>	86
<b>3</b>	<b>ELEMENTARY MATRIX THEORY</b>	<b>91</b>
3.1	<i>Matrices and operations on them</i>	92
3.2	<i>Determinants and matrix inversion</i>	97
3.3	<i>Linear vector spaces</i>	104
3.4	<i>Linear independence, dimensionality, and basis vectors</i>	112
3.5	<i>Linear transformations</i>	114
3.6	<i>Eigenvectors and eigenvalues</i>	116
3.7	<i>Diagonalization of a matrix</i>	124
3.8	<i>The Cayley-Hamilton theorem and functions of square matrices</i>	130
3.9	<i>Multiple eigenvalues</i>	138
3.10	<i>The norm of a linear transformation (matrix)</i>	152
3.11	<i>Summary</i>	153
3.12	<i>Problems</i>	153
<b>4</b>	<b>HIGHER-ORDER SYSTEMS</b>	<b>158</b>
4.1	<i>Standard-form state equations</i>	159
4.2	<i>Writing state equations</i>	166
4.3	<i>State equations in companion form, and block-diagram representation</i>	177
4.4	<i>Linearization</i>	184
4.5	<i>The homogeneous equation and the fundamental matrix</i>	187
4.6	<i>The state-transition matrix and the solution to the homogeneous equation</i>	199
4.7	<i>The complete solution of linear-state equations</i>	202
4.8	<i>Linear time-invariant systems</i>	205
4.9	<i>Linear time-variable systems</i>	210
4.10	<i>Transformations of the state variables</i>	211
4.11	<i>Periodically variable systems</i>	216
4.12	<i>Discrete-time systems</i>	224
4.13	<i>Summary</i>	231
4.14	<i>Problems</i>	231

<b>5</b>	<b>MACROSCOPIC SYSTEM THEORY AND TRANSFORM ANALYSIS</b>	<b>236</b>
5.1	<i>Delta function and distribution theory</i>	237
5.2	<i>Representation of signals in terms of impulses—the convolution integral</i>	250
5.3	<i>The Fourier series</i>	256
5.4	<i>The Fourier transform</i>	261
5.5	<i>Graphical representation of the Fourier transform</i>	270
5.6	<i>The Fourier transform in system analysis</i>	273
5.7	<i>The Laplace transform</i>	278
5.8	<i>Properties of the Laplace transform</i>	282
5.9	<i>The Laplace transform in system analysis</i>	282
5.10	<i>Elements of complex-variable theory</i>	288
5.11	<i>The Laplace inversion integral</i>	299
5.12	<i>State equations and the Laplace transform</i>	303
5.13	<i>The z transform</i>	305
5.14	<i>The inverse z transform</i>	312
5.15	<i>The z transform in system analysis</i>	315
5.16	<i>Summary</i>	319
5.17	<i>Problems</i>	319
<b>6</b>	<b>STABILITY</b>	<b>324</b>
6.1	<i>A physical basis for stability</i>	324
6.2	<i>General properties of the solutions of differential-state equations</i>	328
6.3	<i>Stability in terms of free systems</i>	330
6.4	<i>Formal stability definitions</i>	333
6.5	<i>Stability of free linear systems—Liapunov's first method</i>	338
6.6	<i>Liapunov's second method</i>	350
6.7	<i>The macroscopic view of stability</i>	357
6.8	<i>Controllability and observability</i>	360
6.9	<i>Summary</i>	369
6.10	<i>Problems</i>	370
<b>7</b>	<b>COMPUTATIONAL ASPECTS OF SYSTEM THEORY</b>	<b>375</b>
7.1	<i>Linear-state equations</i>	376
7.2	<i>Solution of simultaneous linear algebraic equations</i>	378
7.3	<i>Eigenvalues of a matrix</i>	388
7.4	<i>Fast Fourier transform</i>	394
7.5	<i>Numerical integration</i>	407
7.6	<i>Calculation of <math>e^{At}</math>—numerical evaluation of the exact solution</i>	431
7.7	<i>Problems</i>	433
