Preface	xvii
I General Theory	
1 Hamiltonian Mechanics	
1.1 The problem of integrable discretization	3
1.2 Poisson brackets and Hamiltonian flows	4
1.3 Symplectic manifolds	7
1.4 Poisson submanifolds and symplectic leaves	11
1.5 Dirac bracket	12
1.6 Poisson reduction	14
1.7 Complete integrability	15
1.8 Bi-Hamiltonian systems	18
1.9 Lagrangian mechanics on \mathbb{R}^N	20
1.10 Lagrangian mechanics on $T\mathcal{P}$ and on $\mathcal{P} \times \mathcal{P}$	21
1.11 Lagrangian mechanics on Lie groups	25
1.11.1 Continuous time case	28
1.11.2 Discrete time case	30
1.12 Invariant Lagrangians and Lie-Poisson bracket	35
1.12.1 Continuous time case	35
1.12.2 Discrete time case	37
1.13 Lagrangian reduction and Euler-Poincaré equations	40
1.13.1 Continuous time case	40
1.13.2 Discrete time case	44
A Appendix: Gradients, vector fields, and other notation	47
B Appendix: Lie groups and Lie algebras	48
1.14 Bibliographical remarks	49
2 R-matrix Hierarchies	
2.1 Introduction	51
2.2 Lie-Poisson brackets	53
2.2.1 General construction	53
2.2.2 Tensor notation	55

2.2.3	Examples	57
2.3	Linear r -matrix structure	58
2.3.1	General construction	58
2.3.2	Tensor notation	60
2.3.3	Examples of R -operators and r -matrices	64
2.4	Generalized linear r -matrix structure	71
2.5	Quadratic r -matrix structure	72
2.5.1	General construction	72
2.5.2	Tensor notation	76
2.5.3	Example	78
2.6	Poisson brackets on direct products	79
2.6.1	General construction	79
2.6.2	Tensor notation	81
2.6.3	Poisson properties of the monodromy map	82
2.7	R -operators from splitting $g = g_+ \oplus g_-$	85
2.8	Bäcklund transformations	89
2.9	Recipe for integrable discretization	92
A	Appendix: Bäcklund-Darboux transformation for KdV	94
2.10	Bibliographical remarks	97

II Lattice Systems

3 Toda Lattice

3.1	Introduction	103
3.2	Tri-Hamiltonian structure	106
3.3	Basic algebras and operators	108
3.3.1	Open-end case	108
3.3.2	Periodic case	109
3.4	Lax representation	110
3.5	Linear r -matrix structure	112
3.6	Quadratic r -matrix structure	117
3.7	2×2 Lax representation	120
3.8	Discretization of the Toda lattice	122
3.9	Localizing changes of variables	125
3.10	Local equations of motion for dTL	127
3.11	Second Toda flow and its discretization	131
3.12	Local equations of motion for dTL2	134
3.13	Third Toda flow and its discretization	136
3.14	Local equations of motion for dTL3	139
3.15	Modified Toda lattice	141
3.16	Discretization of MTL	146
3.17	Local equations of motion for dMTL	149
3.18	Second modification of TL	151
3.19	Discretization of M^2 TL	155

3.20	Local equations of motion for dM^2TL	159
3.21	Third modification of TL	162
A	Appendix: Miura transformations for KdV	163
3.22	Bibliographical remarks	169
4	Volterra Lattice	
4.1	Introduction	173
4.2	Bi-Hamiltonian structure	176
4.3	Lax representation	176
4.4	r -matrix structure	178
4.5	Discretization	179
4.6	Local equations of motion for dVL	181
4.7	Second flow of the Volterra hierarchy	184
4.8	Local discretization of VL2	187
4.9	Local discretization of KdV	188
4.10	Modified Volterra lattice	189
4.11	Discretization of MVL	190
4.12	Local equations of motion for dMVL	192
4.13	Different forms of MVL and dMVL	193
4.14	Particular case $\epsilon \rightarrow \infty$ of MVL	195
4.15	Second modification of VL	197
4.16	Factorizations and the two-field form of VL	198
4.17	Lax representation in $g \otimes g$	203
4.18	Quadratic r -matrix structure in $g \otimes g$	205
4.19	Discretization of the two-field VL	206
4.20	Local equations for the two-field dVL	209
4.21	Two-field versions of VL2 and dVL2	211
4.22	Two-field modified Volterra lattice	215
4.23	Discretization of the two-field MVL	217
4.24	Local equations for the two-field dMVL	221
A	Appendix: Tower of modifications of VL à la Yamilov	223
4.26	Bibliographical remarks	227
5	Newtonian Equations of the Toda Type	
5.1	Introduction	231
5.2	Exponential form of the Toda lattice	234
5.3	Dual Toda lattice	238
5.4	Modified exponential Toda lattice	240
5.5	Parametrizing the linear-quadratic bracket	243
5.6	Parametrizing the cubic-quadratic bracket	247
5.7	Parametrizing the cubic bracket I	251
5.8	Parametrizing the cubic bracket II	254
5.9	Parametrizing the cubic bracket III	256
5.10	Newtonian equations for TL2	258
5.11	Bibliographical remarks	261

6	Relativistic Toda Lattice	
6.1	Introduction	263
6.2	The first Lax representation of $\text{RTL}(\alpha)$	267
6.3	Linear r -matrix for the first Lax representation	269
6.4	Quadratic r -matrix for the first Lax representation	274
6.5	Tri-Hamiltonian structure of $\text{RTL}(\alpha)$	276
6.6	The second Lax representation of $\text{RTL}(\alpha)$	279
6.7	Linear r -matrix for the second Lax representation	281
6.8	Quadratic r -matrix for the second Lax representation	284
6.9	2×2 Lax representations	286
6.10	Discretization of the flow $\text{RTL}_+(\alpha)$	286
6.11	Localizing change of variables for $\text{dRTL}_+(\alpha)$	290
6.12	Discretization of the flow $\text{RTL}_-(\alpha)$	292
6.13	Localizing change of variables for $\text{dRTL}_-(\alpha)$	296
6.14	Modified relativistic Toda lattice $\text{MRTL}(\alpha; \epsilon)$	299
6.15	Different forms of $\text{MRTL}(\alpha; \epsilon)$	301
	6.15.1 Change of variables corresponding to $M_1^{(+)}(\alpha; \epsilon)$	302
	6.15.2 Change of variables corresponding to $M_2^{(+)}(\alpha; \epsilon)$	303
6.16	Lax representations of $\text{MRTL}(\alpha; \epsilon)$	304
	6.16.1 Lax representation corresponding to $M_1^{(+)}(\alpha; \epsilon)$	304
	6.16.2 Lax representation corresponding to $M_2^{(+)}(\alpha; \epsilon)$	306
6.17	r -matrix interpretation of $\text{MRTL}(\alpha; \epsilon)$	309
6.18	Discretization of $\text{MRTL}_+(\alpha; \epsilon)$	311
	6.18.1 Discretization based on the first Lax representation	311
	6.18.2 Discretization based on the second Lax representation	313
6.19	Localizing change of variables for $\text{dMRTL}_+(\alpha; \epsilon)$	315
6.20	Discretization of $\text{MRTL}_-(\alpha; \epsilon)$	318
6.21	Bibliographical remarks	320
7	Relativistic Volterra Lattice	
7.1	Introduction	321
7.2	Quadratic invariant Poisson bracket of $\text{RVL}(\alpha)$	322
7.3	Cubic invariant Poisson bracket of $\text{RVL}(\alpha)$	324
7.4	Auto-transformation of $\text{RVL}(\alpha)$	325
7.5	The first Lax representation of $\text{RVL}(\alpha)$	326
7.6	Quadratic r -matrix for the first Lax representation	328
7.7	The second Lax representation of $\text{RVL}(\alpha)$	331
7.8	The third Lax representation of $\text{RVL}(\alpha)$	333
7.9	Quadratic r -matrix for third Lax representation	335
7.10	Discretization of $\text{RVL}_+(\alpha)$	336
7.11	Localizing change of variables for $\text{dRVL}_+(\alpha)$	337
7.12	Discretization of $\text{RVL}_-(\alpha)$	340
7.13	Localizing change of variables for $\text{dRVL}_-(\alpha)$	341

7.14	Modified relativistic Volterra lattice	343
7.15	Discretization of $MRVL_+(\alpha; \epsilon)$	347
7.16	Appendix: selected results for M_1 -version of $RVL(\alpha)$	349
7.16.1	The flow $RVL_+(\alpha)$ and its discretization	349
7.16.2	The flow $RVL_-(\alpha)$ and its discretization	351
7.16.3	The flow $MRVL_+(\alpha; \epsilon)$ and its discretization	352
7.17	Bibliographical remarks	353
8	Newtonian Equations of the Relativistic Toda Type	
8.1	Introduction	355
8.2	Parametrizing the linear-quadratic bracket	361
8.2.1	Systems $RTL_+(\alpha)$, $dRTL_+(\alpha)$	362
8.2.2	Systems $RTL_-(\alpha)$, $dRTL_-(\alpha)$	365
8.3	Parametrizing the linear bracket	368
8.3.1	Systems $RTL_+(\alpha)$, $dRTL_+(\alpha)$	369
8.3.2	Systems $RTL_-(\alpha)$, $dRTL_-(\alpha)$	371
8.4	Dual linear parametrization	374
8.4.1	Systems $RTL_+(\alpha)$, $dRTL_+(\alpha)$	375
8.4.2	Systems $RTL_-(\alpha)$, $dRTL_-(\alpha)$	377
8.5	Parametrizing the quadratic bracket	380
8.5.1	Systems $RVL_+(\alpha)$, $dRVL_+(\alpha)$	381
8.5.2	Systems $RVL_-(\alpha)$, $dRVL_-(\alpha)$	384
8.6	Parametrizing the linear-quadratic bracket II	387
8.6.1	Systems $MRTL_+(\alpha; \epsilon)$, $dMRTL_+(\alpha; \epsilon)$	388
8.6.2	Systems $MRTL_-(\alpha; \epsilon)$, $dMRTL_-(\alpha; \epsilon)$	391
8.7	Parametrizing the cubic-quadratic bracket	394
8.8	Parametrizing the cubic bracket I	399
8.9	Parametrizing the cubic bracket II	401
8.10	Parametrizing the cubic bracket III	404
8.11	Bibliographical remarks	407
9	Explicit Discretizations for Toda Systems	
9.1	Introduction	409
9.2	Explicit discretization for TL	411
9.3	Explicit discretization for MTL(ϵ)	413
9.4	Explicit discretization for VL	416
9.5	Explicit discretization for MVL(ϵ)	418
9.6	Explicit $dRTL_+(h)$ from implicit dTL	420
9.7	Explicit $dRVL_+(h)$ from implicit dVL	423
9.8	Bibliographical remarks	427

16.6	Localizing change of variables for $dRVL_m^{(+)}(\sigma; \alpha)$	584
16.7	Particular case $h = \alpha$: explicit discretizations	586
16.8	The case of the signature $\sigma = (+1, +1, \dots, +1)$	588
16.8.1	Equations of motion and Hamiltonian structure	588
16.8.2	Discretization	589
16.8.3	Explicit discretization	590
16.8.4	Example: $RVL_3^{(+)}(\alpha)$, the three-field analog of the relativistic Volterra lattice	591
16.9	The case of the signature $\sigma = (+1, -1, \dots, -1)$	592
16.9.1	Equations of motion and Hamiltonian structure	592
16.9.2	Discretization	594
16.9.3	Example: $RVL_3^{(+)}(\sigma; \alpha)$ with $\sigma = (+1, -1, -1)$	595
16.10	Explicit dVL_m from the RVL_m hierarchy	597
16.11	Bibliographical remarks	603
17	Bogoyavlensky Lattices	
17.1	Introduction	605
17.2	Lax representations	606
17.3	Quadratic r -matrix structure of $BL1(m)$	608
17.4	Quadratic r -matrix structure of $BL2(p)$ and $BL3(p)$	609
17.5	Examples of Hamiltonian structures	613
17.5.1	Lattice $BL2(p)$, $p > 1$	614
17.5.2	Lattice $BL3(p)$, $p \geq 2$	615
17.6	Discretization of the lattice $BL1(m)$	616
17.7	Discretization of the lattice $BL2(p)$	621
17.8	Discretization of the lattice $BL3(p)$	626
17.9	Modified Volterra lattice	631
17.10	Alternative approach to $BL1(m)$	634
17.11	Alternative approach to $BL2(p)$	636
17.12	Alternative approach to $BL3(p)$	638
17.13	Bibliographical remarks	640
18	Ablowitz-Ladik Hierarchy	
18.1	Introduction	643
18.2	AKNS hierarchy	645
18.3	Ablowitz-Ladik hierarchy	648
18.4	Non-local difference schemes	654
18.4.1	Difference schemes for NLS	654
18.4.2	Difference schemes for MKdV	657
18.5	Elementary flows of the AL hierarchy	658
18.6	Local discretizations for $\mathcal{F}_{\pm 1}$	660
18.7	Symplectic properties	664
18.8	Local discretizations for NLS	665
18.9	Local discretizations for $\mathcal{F}_{\pm 2}$	670

18.10	Local discretizations for MKdV	675
18.11	Connection with relativistic Toda lattice	678
18.12	Bibliographical remarks	685
III	Systems of Classical Mechanics	
19	Peakons System	
19.1	Introduction	689
19.2	Lax representation and r -matrix	690
19.3	Discretization	693
19.4	Lagrangian interpretation	697
19.5	Bibliographical remarks	699
20	Standard-like Discretizations	
20.1	Introduction	701
20.2	Integrable scalar equations: Examples	702
20.3	Integrable scalar equations: Classification	705
20.4	Bibliographical remarks	709
21	Lie-algebraic Toda Systems	
21.1	Introduction	711
21.2	Lie-algebraic open-end Toda lattices	714
21.3	Lie-algebraic periodic Toda lattices	720
21.4	Toda lattices A_{N-1} and $A_{N-1}^{(1)}$	724
21.5	Discrete time lattices A_{N-1} and $A_{N-1}^{(1)}$	727
21.6	List of generalized Toda lattices	732
21.7	Discretization of lattices B_N , C_N , $C_N^{(1)}$, $A_{2N}^{(2)}$, and $D_{N+1}^{(2)}$	741
21.8	Discretization of lattices D_N , $D_N^{(1)}$, $B_N^{(1)}$, and $A_{2N-1}^{(2)}$	746
21.9	2×2 Lax representations: continuous time case	752
21.10	2×2 Lax representations: discrete time case	756
21.11	Lattice G_2 as a reduction of the lattice B_3	760
21.12	Lattice $G_2^{(1)}$ as a reduction of the lattice $B_3^{(1)}$	764
21.13	Toda lattice $D_4^{(3)}$, continuous and discrete	769
21.14	Bibliographical remarks	775
22	Garnier System	
22.1	Introduction	777
22.2	Garnier system	779
22.2.1	Equations of motion and Hamiltonian structure	779
22.2.2	Integrals of motion	779
22.2.3	“Big” Lax representation	781
22.2.4	“Small” Lax representation	783
22.3	Anharmonic oscillator	785
22.3.1	Equations of motion and Hamiltonian structure	785
22.3.2	Integrals of motion	785

22.3.3	“Big” Lax representation	786
22.3.4	“Small” Lax representation	787
22.4	Wojciechowski system	788
22.4.1	Equations of motion and Hamiltonian structure	788
22.4.2	Integrals of motion	790
22.4.3	“Big” Lax representation	790
22.4.4	“Small” Lax representation	792
22.5	Bäcklund transformation for the Garnier system	792
22.6	Bäcklund transformation for anharmonic oscillator	795
22.7	Bäcklund transformation for Wojciechowski system	796
22.8	Explicit discretization of the Garnier system	799
22.8.1	Equations of motion and symplectic properties	799
22.8.2	Integrals of motion	800
22.8.3	“Big” Lax representation	801
22.8.4	“Small” Lax representation	805
22.9	Explicit discretization of anharmonic oscillator	806
22.9.1	Equations of motion and symplectic properties	806
22.9.2	Integrals of motion	807
22.9.3	“Big” Lax representation	807
22.9.4	“Small” Lax representation	810
22.10	Explicit discretization of Wojciechowski system	810
22.10.1	Equations of motion and symplectic properties	810
22.10.2	Integrals of motion	812
22.10.3	“Big” Lax representation	813
22.10.4	“Small” Lax representation	814
22.11	Bibliographical remarks	815
23	Hénon-Heiles System	
23.1	Introduction	817
23.2	Lax representation	818
23.3	Discretization of Hénon-Heiles system	820
23.4	Bibliographical remarks	822
24	Neumann System	
24.1	Introduction	823
24.2	Double Neumann system	826
24.2.1	Equations of motion and Hamiltonian structure	826
24.2.2	“Big” Lax representation	828
24.2.3	“Small” Lax representation	831
24.2.4	Unconstrained version	833
24.3	Neumann system	835
24.3.1	Equations of motion and Hamiltonian structure	835
24.3.2	“Big” Lax representation	837
24.3.3	“Small” Lax representation	839
24.3.4	Unconstrained version	840

24.4	Rosochatius system	841
24.4.1	Equations of motion and Hamiltonian structure	841
24.4.2	“Big” Lax representation	844
24.4.3	“Small” Lax representation	845
24.4.4	Unconstrained version	846
24.5	Bäcklund transformation for double Neumann system	847
24.6	Bäcklund transformation for Neumann system	853
24.7	Bäcklund transformation for Rosochatius system	856
24.8	Ragnisco’s discretization of Neumann system	859
24.9	V. Adler’s discretization of Neumann system	862
24.10	Coupled Neumann system	866
24.11	Discretizations of the coupled Neumann system	869
24.11.1	Discretization à la Ragnisco	869
24.11.2	Discretization à la V. Adler	871
24.12	Bibliographical remarks	874
25	Lie-algebraic Generalizations of the Garnier Systems	
25.1	Introduction	877
25.2	Garnier systems related to symmetric spaces	878
25.3	Garnier systems related to <i>AIII</i>	883
25.3.1	Equations of motion and Lax representation	883
25.3.2	Example: $M = 2$	885
25.3.3	Discretizations	886
25.3.4	Example: discrete systems with $M = 2$	889
25.4	Garnier systems related to <i>CI</i> and <i>DIII</i>	890
25.5	Garnier systems related to <i>BDI</i>	891
25.5.1	Equations of motion and Lax representation	891
25.5.2	Discretization	893
25.6	Bibliographical remarks	896
26	Integrable Cases of Rigid Body Dynamics	
26.1	Introduction	897
26.2	Multi-dimensional Euler top	901
26.3	Discrete time Euler top	905
26.4	Rigid body in a quadratic potential	909
26.5	Discrete time top in a quadratic potential	912
26.6	Multi-dimensional Lagrange top	916
26.6.1	Body frame formulation	916
26.6.2	Rest frame formulation	919
26.7	Discrete time analog of the Lagrange top	920
26.7.1	Rest frame formulation	920
26.7.2	Moving frame formulation	924
26.8	Three-dimensional Lagrange top	926
26.9	Discrete time three-dimensional Lagrange top	931
26.10	Rigid body motion in an ideal fluid: Clebsch case	936

26.11	Discretization of the Clebsch problem	938
26.11.1	Case $A = B^2$ of the Clebsch problem	938
26.11.2	Case $A = B$ of the Clebsch problem	939
