Contents

Preface xiii

1. Linear Partial Differential Equations 1

1.1 Introduction 1
1.2 Basic Concepts and Definitions 2
1.3 The Linear Superposition Principle 4
1.4 Some Important Classical Linear Model Equations 7
1.5 The Classification of Second-Order Linear Equations and The Method of Characteristics 10
1.6 The Method of Separation of Variables 20
1.7 Fourier Transforms and Initial-Boundary-Value Problems 32
1.8 Applications of Multiple Fourier Transforms to Partial Differential Equations 44
1.9 Laplace Transforms and Initial-Boundary-Value Problems 49
1.10 Hankel Transforms and Initial-Boundary-Value Problems 58
1.11 Green's Functions and Boundary-Value Problems 67
1.12 Exercises 78

2. Nonlinear Model Equations and Variational Principles 93

2.1 Introduction 93
2.2 Basic Concepts and Definitions 93
2.3 Some Nonlinear Model Equations 94
2.4 Variational Principles and the Euler-Lagrange Equations 99
2.5 The Variational Principle for Nonlinear Klein-Gordon Equations 104
2.6 The Variational Principle for Nonlinear Water Waves 105
2.7 Exercises 107

3. First-Order, Quasi-Linear Equations and The Method of Characteristics 111

3.1 Introduction 111
3.2 The Classification of First-Order Equations 111
3.3 The Construction of a First-Order Equation 112
3.4 The Geometrical Interpretation of a First-Order Equation 116
3.5 The Method of Characteristics and General Solutions 118
3.6 Exercises 130

4. First-Order Nonlinear Equations and Their Applications 135

4.1 Introduction 135
4.2 The Generalized Method of Characteristics 135
4.3 Complete Integrals of Certain Special Nonlinear Equations 139
4.4 Examples of Applications to Analytical Dynamics 145
4.5 Applications to Nonlinear Optics 151
4.6 Exercises 156

5. Conservation Laws and Shock Waves 159

5.1 Introduction 159
5.2 Conservation Laws 159
5.3 Discontinuous Solutions and Shock Waves 172
5.4 Weak or Generalized Solutions 174
5.5 Exercises 181

6. Kinematic Waves and Specific Real-World Nonlinear Problems 185

6.1 Introduction 185
6.2 Kinematic Waves 185
6.3 Traffic Flow Problems 189
6.4 Flood Waves in Long Rivers 202
6.5 Chromatographic Models and Sediment Transport in Rivers 204
6.6 Glacier Flow 210
6.7 Roll Waves and Their Stability Analysis 213
6.8 Simple Waves and Riemann's Invariants 219
6.9 The Nonlinear Hyperbolic System and Riemann's Invariants 239
6.10 Generalized Simple Waves and Generalized Riemann's Invariants 250
6.11 Exercises 254

7. Nonlinear Dispersive Waves and Whitham's Equations 263

7.1 Introduction 263
7.2 Linear Dispersive Waves 263
7.3 Initial-Value Problems and Asymptotic Solutions 267

7.4 Nonlinear Dispersive Waves and Whitham's Equations 270
7.5 Whitham's Theory of Nonlinear Dispersive Waves 273
7.6 Whitham's Averaged Variational Principle 276
7.7 The Whitham Instability Analysis and Its Applications to Water Waves 278
7.8 Exercises 281

8. Nonlinear Diffusion-Reaction Phenomena, Burgers' and Fisher's Equations 283

8.1 Introduction 283
8.2 Burgers' Equation and the Plane Wave Solution 283
8.3 Traveling Wave Solutions and Shock-Wave Structure 286
8.4 The Cole-Hopf Transformation and the Exact Solution of the Burgers Equation 289
8.5 The Asymptotic Behavior of the Exact Solution of the Burgers Equation 294
8.6 The N Wave Solution 296
8.7 Burgers' Initial- and Boundary-Value Problem 298
8.8 Fisher's Equation and Diffusion-Reaction Process 301
8.9 Traveling Wave Solutions and Stability Analysis 303
8.10 Perturbation Solutions of the Fisher Boundary-Value Problem 307
8.11 Similarity Methods and Similarity Solutions of Diffusion Equations 309
8.12 Nonlinear Reaction-Diffusion Equations 319
8.13 A Brief Summary of Recent Work with References 324
8.14 Exercises 325

9. Solitons and The Inverse Scattering Transform 331

9.1 Introduction 331
9.2 The History of the Soliton and Soliton Interactions 331
9.3 The Boussinesq and Korteweg-de Vries (KdV) Equations 336
9.4 Solutions of the KdV Equation, Solitons and Cnoidal Waves 347
9.5 The Lie Group Method and Similarity and Rational Solutions of the KdV Equation 356
9.6 Conservation Laws and Nonlinear Transformations 359
9.7 The Inverse Scattering Transform (IST) Method 363
9.8 Bäcklund Transformations and the Nonlinear Superposition Principle 386
9.9 The Lax Formulation, Its KdV Hierarchy, and the Zakharov and Shabat (ZS) Scheme 391
9.10 The AKNS Method 400
9.11 Exercises 401

10. The Nonlinear Schrödinger Equation and Solitary Waves 405

10.1 Introduction 405
10.2 The One-Dimensional Linear Schrödinger Equation 405
10.3 The Derivation of the Nonlinear Schrödinger (NLS) Equation and Solitary Waves 407
10.4 Properties of the Solutions of the Nonlinear Schrödinger Equation 412
10.5 Conservation Laws for the NLS Equation 419
10.6 The Inverse Scattering Method for the Nonlinear Schrödinger Equation 422
10.7 Examples of Physical Applications in Fluid Dynamics and Plasma Physics 424
10.8 Applications to Nonlinear Optics 438
10.9 Exercises 449

11. Nonlinear Klein-Gordon and Sine-Gordon Equations 453

11.1 Introduction 453
11.2 The One-Dimension Linear Klein-Gordon Equation 453
11.3 The Two-Dimensional Linear Klein-Gordon Equation 456
11.4 The Three-Dimensional Linear Klein-Gordon Equation 458
11.5 The Nonlinear Klein-Gordon Equation and Averaging Techniques 459
11.6 The Klein-Gordon Equation and the Whitham Averaged Variational Principle 467
11.7 The Sine-Gordon Equation, Soliton and Anti-Soliton Solutions 470
11.8 The Solution of the Sine-Gordon Equation by Separation of Variables 475
11.9 Bäcklund Transformations for the Sine-Gordon Equation 484
11.10 The Solution of the Sine-Gordon Equation by the Inverse Scattering Method 487
11.11 The Similarity Method for the Sine-Gordon Equation 491
11.12 Nonlinear Optics and the Sine-Gordon Equation 492
11.13 Exercises 496

12. Asymptotic Methods and Nonlinear Evolution Equations 501

12.1 Introduction 501
12.2 The Reductive Perturbation Method and Quasi-Linear Hyperbolic Systems 502
12.3 Quasi-Linear Dissipative Systems 506
12.4 Weakly Nonlinear Dispersive Systems and the Korteweg-de Vries Equation 508
12.5 Strongly Nonlinear Dispersive Systems and the Nonlinear Schrödinger Equation 521

12.6 The Perturbation Method of Ostrovsky and Pelinosky 527
12.7 The Method of Multiple Scales 531
12.8 Method of Multiple Scales for the Case of the Long Wave Approximation 538

Answers and Hints to Selected Exercises **541**

Bibliography **559**

Index **581**
