<b>1</b>	<b>Constrained minimization</b>	<b>1</b>
1.1	Preliminaries . . . . .	1
1.2	Constrained minimization . . . . .	8
1.3	Dual method . . . . .	13
1.4	Minimizers with the least energy . . . . .	14
1.5	Application of dual method . . . . .	15
1.6	Multiple solutions of nonhomogeneous equation . . . . .	17
1.7	Sets of constraints . . . . .	19
1.8	Constrained minimization for $F_f$ . . . . .	24
1.9	Subcritical problem . . . . .	29
1.10	Application to the $p$ -Laplacian . . . . .	30
1.11	Critical problem . . . . .	35
1.12	Bibliographical notes . . . . .	37
<b>2</b>	<b>Applications of Lusternik–Schnirelman theory</b>	<b>39</b>
2.1	Palais–Smale condition, case $p \neq q$ . . . . .	39
2.2	Duality mapping . . . . .	40
2.3	Palais–Smale condition, case $p = q$ . . . . .	43
2.4	The Lusternik–Schnirelman theory . . . . .	47
2.5	Case $p > q$ . . . . .	55
2.6	Case $p < q$ . . . . .	56
2.7	Case $p = q$ . . . . .	60
2.8	The $p$ -Laplacian in bounded domain . . . . .	63
2.9	Iterative construction of eigenvectors . . . . .	67
2.10	Critical points of higher order . . . . .	70
2.11	Bibliographical notes . . . . .	73
<b>3</b>	<b>Nonhomogeneous potentials</b>	<b>74</b>
3.1	Preliminaries and assumptions . . . . .	74
3.2	Constrained minimization . . . . .	76
3.3	Application — compact case . . . . .	79
3.4	Perturbation theorems — noncompact case . . . . .	81
3.5	Perturbation of the functional $a$ — noncompact case . . . . .	85
3.6	Existence of infinitely many solutions . . . . .	88

3.7	General minimization — case $p > q$ . . . . .	90
3.8	Set of constraints $V$ . . . . .	99
3.9	Application to a critical case $p = n$ . . . . .	101
3.10	Technical lemmas . . . . .	103
3.11	Existence result for problem (3.34) . . . . .	112
3.12	Bibliographical notes . . . . .	113
<b>4</b>	<b>Potentials with covariance condition</b> . . . . .	<b>115</b>
4.1	Preliminaries and constrained minimization . . . . .	115
4.2	Dual method . . . . .	120
4.3	Minimization subject to constraint $V$ . . . . .	120
4.4	Sobolev inequality . . . . .	121
4.5	Mountain pass theorem and constrained minimization . . . . .	122
4.6	Minimization problem for a system of equations . . . . .	125
4.7	Bibliographical notes . . . . .	127
<b>5</b>	<b>Eigenvalues and level sets</b> . . . . .	<b>128</b>
5.1	Level sets . . . . .	128
5.2	Continuity and monotonicity of $\sigma$ . . . . .	130
5.3	The differentiability properties of $\sigma$ . . . . .	132
5.4	Schechter's version of the mountain pass theorem . . . . .	135
5.5	General condition for solvability of (5.11) . . . . .	138
5.6	Properties of the function $\kappa(t)$ . . . . .	140
5.7	Hilbert space case . . . . .	142
5.8	Application to elliptic equations . . . . .	143
5.9	Bibliographical notes . . . . .	148
<b>6</b>	<b>Generalizations of the mountain pass theorem</b> . . . . .	<b>149</b>
6.1	Version of a deformation lemma . . . . .	149
6.2	Mountain pass alternative . . . . .	153
6.3	Consequences of mountain pass alternative . . . . .	155
6.4	Hampwile alternative . . . . .	157
6.5	Applicability of the mountain pass theorem . . . . .	160
6.6	Mountain pass and Hampwile alternative . . . . .	163
6.7	Bibliographical notes . . . . .	166
<b>7</b>	<b>Nondifferentiable functionals</b> . . . . .	<b>167</b>
7.1	Concept of a generalized gradient . . . . .	167
7.2	Generalized gradients in function spaces . . . . .	172
7.3	Mountain pass theorem for locally Lipschitz functionals . . . . .	174
7.4	Consequences of Theorem 7.3.1 . . . . .	181
7.5	Application to boundary value problem with discontinuous nonlinearity . . . . .	183
7.6	Lower semicontinuous perturbation . . . . .	185
7.7	Deformation lemma for functionals satisfying condition $(L)$ . . . . .	188

7.8	Application to variational inequalities . . . . .	195
7.9	Bibliographical notes . . . . .	197
<b>8</b>	<b>Concentration–compactness principle — subcritical case</b>	<b>198</b>
8.1	Concentration–compactness principle at infinity — subcritical case . . . . .	198
8.2	Constrained minimization — subcritical case . . . . .	200
8.3	Constrained minimization with $b \neq \text{const}$ , subcritical case . . . . .	205
8.4	Behaviour of the Palais–Smale sequences . . . . .	211
8.5	The exterior Dirichlet problem . . . . .	215
8.6	The Palais–Smale condition . . . . .	218
8.7	Concentration–compactness principle I . . . . .	221
8.8	Bibliographical notes . . . . .	223
<b>9</b>	<b>Concentration–compactness principle — critical case</b>	<b>224</b>
9.1	Critical Sobolev exponent . . . . .	224
9.2	Concentration–compactness principle II . . . . .	228
9.3	Loss of mass at infinity . . . . .	229
9.4	Constrained minimization — critical case . . . . .	233
9.5	Palais–Smale sequences in critical case . . . . .	237
9.6	Symmetric solutions . . . . .	244
9.7	Remarks on compact embeddings into $L^{2^*}(Q)$ and $L_K^{2^*}(\mathbb{R}^n)$ . . . . .	250
9.8	Bibliographical notes . . . . .	252
	<b>Appendix</b>	<b>253</b>
A.1	Sobolev spaces . . . . .	253
A.2	Embedding theorems . . . . .	254
A.3	Compact embeddings of spaces $W^{1,p}(\mathbb{R}^n)$ and $D^{1,p}(\mathbb{R}^n)$ . . . . .	255
A.4	Conditions of concentration and uniform decay at infinity . . . . .	259
A.5	Compact embedding for $H_r^1(\mathbb{R}^n)$ . . . . .	261
A.6	Schwarz symmetrization . . . . .	264
A.7	Pointwise convergence . . . . .	264
A.8	Gâteaux derivatives . . . . .	266
	<b>Bibliography</b>	<b>270</b>
	<b>Glossary</b>	<b>287</b>
	<b>Index</b>	<b>289</b>
