Preface to the English Translation xvii

Preface to the Russian Edition xix

List of Main Notations 1

1 Removable Singularities 5

1.1 Bochner's Theorems 5

1.1.1 *Sheaf of solutions* 5

1.1.2 *Removable sets* 6

1.1.3 *Hausdorff measure* 7

1.1.4 *Capacity* 8

1.1.5 *The fundamental theorem of Bochner* 12

1.1.6 *The second theorem of Bochner* 13

1.1.7 *Examples* 14

1.2 Sufficient Conditions for Removability in Terms of Hausdorff Measure 15

1.2.1 *A fundamental lemma* 15

1.2.2 *Removability for* $W^{s,q}_{loc}(X)$ 18

1.2.3 *Removability for* $C^{s}_{loc}(X)$ 20

1.2.4 *Removability for* $C^{s,\lambda}_{loc}(X)$ 21

1.2.5 *Painlevé's theorem* 24

1.2.6 *Some examples* 28

1.2.7 *Generalization to cohomology spaces* 28

1.3 Removable Singularities on Hypersurfaces 29

1.3.1 *Transversal order* 30

1.3.2 *Transversally non-characteristic hypersurfaces* 31

1.3.3 *Affine singularities* 35

1.3.4 *Rado's theorem* 39

1.4 Characterization of Removable Singularities in Terms of Capacity . . 43

1.4.1 *Historical information* 43

1.4.2 *Solutions regular at infinity* 43

1.4.3 *The capacity* $\mathrm{Cap}(\sigma, L, P, (h))$ 45

1.4.4 *The main result* 48

1.4.5 *Some corollaries* 50

1.4.6 *Capacitary extremals* 51

1.4.7 *Examples* . . . 52
1.4.8 *Further horizons* . . . 54
1.5 Metric Properties of the Capacity Associated to Hölder Spaces . . . 55
1.5.1 *Some history* . . . 55
1.5.2 *A metric lemma* . . . 55
1.5.3 *Commensurability with Hausdorff content for compact sets* . . . 57
1.5.4 *Conclusion of proof* . . . 65
1.5.5 *Semiadditivity of the capacity* . . . 65

2 Laurent Series 67
2.1 Laurent Expansion for Differential Complexes . . . 67
2.1.1 *History of the subject* . . . 67
2.1.2 *Cohomology of differential complexes with point support* . . . 68
2.1.3 *Cohomology of Hilbert complexes with point support* . . . 69
2.1.4 *Laurent expansions* . . . 71
2.1.5 *Laurent series for elliptic complexes* . . . 72
2.2 Laurent Series for Solutions of Elliptic Systems . . . 76
2.2.1 *Admissible scalar products in the space of polynomials* . . . 76
2.2.2 *Expansions in series of fundamental matrices* . . . 77
2.2.3 *Properties of the matrices $M_\alpha(y)$* . . . 80
2.2.4 *Analog of the Cauchy estimates for the coefficients of Laurent series* . . . 84
2.2.5 *Laurent series for solutions of the system $Pu = 0$* . . . 85
2.2.6 *Concluding remarks* . . . 87
2.3 Taylor Series for Solutions of Elliptic Systems . . . 87
2.3.1 *Dual situation* . . . 87
2.3.2 *Analog of the Cauchy estimates for the coefficients of Taylor series* . . . 89
2.3.3 *Taylor series for solutions of the system $Pu = 0$* . . . 89
2.3.4 *Analyticity of the cohomology of elliptic complexes* . . . 91
2.4 Examples . . . 91
2.4.1 *Spherical averaging* . . . 91
2.4.2 *The scalar product, in connection with calculating the Cauchy principal value* . . . 93
2.4.3 *The Gauss representation for homogeneous polynomials* . . . 94
2.4.4 *More on the Almanzi formula* . . . 96
2.4.5 *Laurent expansion on the line* . . . 97
2.4.6 *Remarks on Clifford analysis* . . . 98
2.4.7 *Laurent series for matrix factorizations of the Laplace equation* 98
2.4.8 *Laurent series for holomorphic functions* . . . 100
2.4.9 *Laurent series for harmonic functions* . . . 100
2.4.10 *Laurent series for polyharmonic functions* . . . 101
2.4.11 *A scalar product connected with approximations by solutions* . 102
2.5 Local Properties of Solutions of Elliptic Equations . . . 104
2.5.1 *A digression* . . . 104

2.5.2 *Behavior of a solution near a finite singular point* 104
2.5.3 *Behavior of solutions near the point at infinity* 106
2.5.4 *Homogeneous solutions* 106
2.5.5 *Expanding a solution as a series of polynomial solutions* 107
2.5.6 *Expanding solutions via the Euler operator* 107
2.5.7 *The Cauchy principal value* 110
2.5.8 *A generalization for cohomology classes* 113

3 Representation of Solutions with Non-Discrete Singularities 115
3.1 The Topology in Spaces of Solutions of Elliptic Systems 115
3.1.1 *Locally convex inductive limit topology* 115
3.1.2 *The Stieltjes-Vitali Theorem* 116
3.1.3 *Solutions on Closed Sets* 117
3.1.4 *Regular compacta* 118
3.1.5 *The extension theorem* 119
3.1.6 *The Hilbert spaces* $l^2(r)^K$ 120
3.1.7 *Another topology in the space of solutions on a compact set* . . 121
3.1.8 *The role of regularity* 123
3.1.9 *The equivalence of two topologies on* $\mathrm{Sol}(K)$ 125
3.1.10 *Notes* 125
3.2 The Structure of Solutions with Compact Singularities 126
3.2.1 *Golubev series* 126
3.2.2 *Sufficiency of the representation as a Golubev series* 127
3.2.3 *Releasing condition 2) on the coefficients* 128
3.2.4 *The general form of a continuous linear functional on* $\mathrm{Sol}(K, P')$ 129
3.2.5 *Conclusion of the proof of Theorem 3.2.1* 130
3.2.6 *Golubev series for solutions of elliptic systems with real analytic coefficients* 131
3.2.7 *Some consequences of Theorem 3.2.6* 132
3.2.8 *Golubev series with finitely many terms* 132
3.2.9 *Example* 134
3.3 Duality in the Spaces of Solutions of Elliptic Systems 135
3.3.1 *Preliminaries* 135
3.3.2 *Grothendieck duality* 136
3.3.3 *Green's function* 138
3.3.4 *Grothendieck duality for harmonic functions* 140
3.3.5 *A corollary* 144
3.3.6 *Miscellaneous* 148
3.3.7 *Duality for solutions of* $Pu = 0$ 149
3.3.8 *Proof of the main theorem* 151
3.3.9 *The converse theorem* 158
3.3.10 *Duality in complex analysis* 158
3.4 A Representation Theorem for Solutions off a Plane 159
3.4.1 *Motivation* 159
3.4.2 *Statement of the main results* 160

3.4.3 *The converse theorem* . . . 161
3.4.4 *The abstract framework* . . . 162
3.4.5 *Duality in the space of sequences* . . . 164
3.4.6 *Transpose* . . . 165
3.4.7 *Conclusion of proof* . . . 167
3.4.8 *An example for harmonic functions* . . . 169
3.4.9 *Hyperfunctions* . . . 169
3.5 Spectral Decomposition of the Green-Type Integral in a Ball . . . 170
3.5.1 *The Green-type integral* . . . 170
3.5.2 *A digression* . . . 171
3.5.3 *Spectrum* . . . 172
3.5.4 *Examples* . . . 178
3.5.5 *Theorem on iterations* . . . 179
3.5.6 *Solvability of the system $Pu = f$ in a ball* . . . 184
3.5.7 *Applications* . . . 189

4 Uniform Approximation **191**
4.1 Runge Theorem . . . 191
4.1.1 *A tour of the theory of holomorphic approximation* . . . 191
4.1.2 *Holomorphic approximations in several variables* . . . 193
4.1.3 *From holomorphic functions to solutions of elliptic equations* . 194
4.1.4 *Approximation by solutions of overdetermined systems* . . . 197
4.1.5 *Differentiable functions on a closed set* . . . 197
4.1.6 *A theorem of Malgrange* . . . 198
4.1.7 *Approximation of finitely smooth solutions by infinitely differentiable solutions* . . . 200
4.1.8 *Local solvability of homogeneous elliptic systems* . . . 203
4.1.9 *A Runge theorem* . . . 203
4.1.10 *Miscellaneous* . . . 206
4.2 Walsh Type Theorems . . . 207
4.2.1 *Approximation by linear combinations of fundamental solutions* 207
4.2.2 *Approximation on domains with strong cone property* . . . 211
4.2.3 *Approximation on compact sets of zero measure* . . . 212
4.2.4 *Approximation on nowhere dense compact sets* . . . 214
4.2.5 *Other approximation theorems* . . . 215
4.2.6 *A closer look at the case of differential operators with constant coefficients* . . . 217
4.2.7 *The additive Cousin problem* . . . 221
4.2.8 *Domain of existence for solutions* . . . 223
4.2.9 *Some remarks* . . . 224
4.3 The Notion of Capacity in Problems of Uniform Approximation . . . 225
4.3.1 *Preliminary results* . . . 225
4.3.2 *Further look at the capacity* $\mathrm{Cap}(\sigma, C^s(X), P, (h))$ . . . 225
4.3.3 *Other expressions for the capacity* . . . 228
4.3.4 *General properties* . . . 229

4.3.5 *Comparison with Hausdorff measure* 231
4.3.6 *Behavior under affine transformations* 232
4.3.7 *The capacity of a ball* 233
4.3.8 *The capacity of a point* 235
4.3.9 *Capacity and removable singularities* 236
4.3.10 *More on the capacity* $\mathrm{Cap}(\sigma, C^s(X))$ 237
4.4 Vitushkin's Constructive Technique 239
4.4.1 *Statements of problems* 239
4.4.2 *Special partitions of unity in* $\mathbb{R}^n$ 240
4.4.3 *The localization operator* 241
4.4.4 *Separation of singularities of functions being approximated* . . 246
4.4.5 *The basic technical lemma* 246
4.4.6 *Approximation of functions by parts* 250
4.4.7 *A preparatory theorem* 251
4.4.8 *Localized version of the approximation theorem* 256
4.4.9 *Approximation on compact sets with complement having the cone property* 257
4.4.10 *Unsolved problems* 257
4.5 Capacitary Criteria 259
4.5.1 *A counterexample* 259
4.5.2 *An auxiliary result* 261
4.5.3 *Formulation of the fundamental result* 262
4.5.4 *Proof of the implication* 1) $\Rightarrow$ 2) 263
4.5.5 *Proof of the implication* 3) $\Rightarrow$ 1) 266
4.5.6 *A closer look at the case of equations of order* $p < n$ 268
4.5.7 *Some problems* 269

5 Mean Approximation **271**
5.1 Reduction to the Spectral Synthesis in Sobolev Spaces 271
5.1.1 *Preliminaries* 271
5.1.2 *Approximation in the mean by holomorphic functions* 272
5.1.3 *Sketch of the theory for solutions of elliptic equations* 275
5.1.4 *Sobolev functions on a closed set* 280
5.1.5 *Reduction* 281
5.2 Approximation on Nowhere Dense Compact Sets 282
5.2.1 *Approximation in* $W^{s,q}(K)$, *for small* q 282
5.2.2 *Capacitary criteria* 283
5.2.3 *From nowhere dense compact sets to those having interior points* 284
5.2.4 *Criteria of Wiener type* 284
5.2.5 *Bases with double orthogonality* 285
5.2.6 *A basis of holomorphic monomials* 288
5.2.7 *A basis of harmonic polynomials* 289
5.2.8 *Instability phenomena* 290
5.2.9 *Holomorphic moments* 293
5.2.10 *Harmonic moments* 295

5.2.11 *Factorizations* *296*
5.3 The Notion of Capacity in Problems of Mean Approximation 298
5.3.1 *Overview* *298*
5.3.2 *L^q-estimates for potentials* *298*
5.3.3 *Decay estimates for potentials* *301*
5.3.4 *The capacities* Cap $(\sigma, W^{s,q}(X), P, (h))$ *303*
5.3.5 *Pathologies of the capacities* *305*
5.4 Construction of Mean Approximations 306
5.4.1 *A lemma of Lindberg* *306*
5.4.2 *Estimates for the localization operator in Sobolev spaces* *306*
5.4.3 *Separation of singularities* *308*
5.4.4 *The basic technical lemma* *309*
5.4.5 *Proof of the basic lemma under an additional hypothesis* *309*
5.4.6 *Conclusion of the proof* *311*
5.4.7 *Approximation of a function by parts* *314*
5.5 Capacitary Criteria for the Mean Approximation 315
5.5.1 *A preparatory lemma* *316*
5.5.2 *The fundamental result: formulation and commentary* *317*
5.5.3 *Spectral synthesis in Sobolev spaces* *318*

6 BMO Approximation **319**
6.1 BMO Functions on Compact Sets 319
6.1.1 *The space* BMO$(\mathbb{R}^n)$ *320*
6.1.2 *Multiplication by functions of compact support* *322*
6.1.3 *Local* BMO *spaces* *324*
6.1.4 *Higher-order* BMO *spaces* *324*
6.1.5 VMO *functions* *325*
6.1.6 *Approximation of* BMO *functions by C^∞ functions of compact support* *328*
6.1.7 VMO *functions on a closed set* *329*
6.2 Duality 330
6.2.1 *Local Hardy spaces* *330*
6.2.2 *The dual of the local Hardy space* *331*
6.2.3 *The dual of* VMO *333*
6.3 Boundedness Theorems for Pseudodifferential Operators on BMO spaces 335
6.3.1 *Boundedness in local Hardy spaces* *335*
6.3.2 *Boundedness in local* BMO *spaces* *336*
6.3.3 *Fundamental theorem of calculus* *336*
6.3.4 *Behavior in higher order Hardy spaces* *338*
6.3.5 *Behavior in higher order* BMO *spaces* *338*
6.4 Higher Order Approximation 338
6.4.1 *The annihilator of the subspace of solutions* *339*
6.4.2 *Description of the closure of the subspace of solutions* *340*
6.4.3 *Notes* *341*

6.5 Lower Order Approximation 341
6.5.1 *A counterexample* *341*
6.5.2 *Reduction to spectral synthesis in Hardy spaces* *342*
6.5.3 *Approximation on nowhere dense compact sets* *343*
6.5.4 *Capacitary criteria* *344*

7 Conditional Stability **345**
7.1 Conditionally Stable Linear Problems 345
7.1.1 *Ill-posed problems* *345*
7.1.2 *Conditionally stable problems* *347*
7.1.3 *Example of a conditionally stable problem* *348*
7.1.4 *The case of normed spaces* *348*
7.2 An Abstract Carleman Formula 349
7.2.1 *A brief reference* *349*
7.2.2 *An abstract formula for solutions of stable problems* *349*
7.2.3 *A Carleman formula* *350*
7.2.4 *Two-norm spaces* *351*
7.2.5 *Proof of necessity in Theorem 7.2.4* *354*
7.2.6 *Proof of sufficiency in Theorem 7.2.4* *355*
7.2.7 *Some remarks* *355*
7.3 A Carleman Formula for Solutions 356
7.3.1 *Basic assumption* *356*
7.3.2 *Continuation problems for solutions* *356*
7.3.3 *Analog of the Stieltjes-Vitali theorem* *357*
7.3.4 *A Carleman formula* *358*
7.3.5 *Analytic continuation* *359*
7.3.6 *The Cauchy problem* *360*
7.3.7 *Other examples* *362*
7.4 An Inversion Formula for Toeplitz Operators 363
7.4.1 *Toeplitz operators on Hilbert spaces of solutions* *363*
7.4.2 *Statement of the problem* *364*
7.4.3 *A variant of the Carleman formula* *364*
7.4.4 *Conditional stability of the problem* *365*
7.5 Carleman Function of the Cauchy Problem 366
7.5.1 *The Cauchy problem* *366*
7.5.2 *Carleman functions* *367*
7.5.3 *Carleman functions and regularization* *367*
7.5.4 *Carleman function and conditional stability* *369*
7.5.5 *Existence* *370*
7.5.6 *Further horizons* *371*

8 The Cauchy Problem **373**
8.1 Traces of Holomorphic Functions 373
8.1.1 *The abstract framework* *373*
8.1.2 *Criteria for analytic continuation* *375*

8.1.3 *A generalization of the Riesz theorem* *379*
8.2 Solvability of Systems with Surjective Symbol 381
8.2.1 *P-convex manifolds* *382*
8.2.2 *Formulation of the result* *382*
8.2.3 *Necessity* *383*
8.2.4 *An excursion in the theory of Sobolev spaces* *383*
8.2.5 *Proof of sufficiency* *384*
8.2.6 *Left fundamental solutions* *386*
8.3 Hardy Spaces 387
8.3.1 *Special exhausting functions for domains* *387*
8.3.2 *Dirichlet systems* *388*
8.3.3 *A Green formula* *389*
8.3.4 *Generalized Hardy spaces* *392*
8.3.5 *Boundary values of solutions of Hardy class* *396*
8.3.6 *Open problems* *397*
8.4 Solvability of the Cauchy Problem with Data Given on the Whole Boundary 398
8.4.1 *A uniqueness theorem* *398*
8.4.2 *Solvability in Hardy spaces* *399*
8.4.3 *Local regularity* *401*
8.5 Solvability of the Cauchy Problem with Data Given on a Part of the Boundary 405
8.5.1 *Statement of results* *405*
8.5.2 *Proof of necessity* *406*
8.5.3 *Special approximations by solutions of the transposed system* . 407
8.5.4 *Completion of the proof* *408*

9 Quasiconformality **411**
9.1 The Stability Concept 412
9.1.1 *Basic classes of mappings* *412*
9.1.2 *Examples* *413*
9.1.3 *Closeness functionals* *414*
9.1.4 *Stability* *417*
9.1.5 *Problems of the theory of stability* *418*
9.1.6 *Liouville's theorem* *420*
9.2 First Order Elliptic Systems 422
9.2.1 *Cauchy's theorem* *422*
9.2.2 *Morera's theorem* *423*
9.2.3 *Cauchy's formula* *424*
9.2.4 *Some singular integral operators* *424*
9.2.5 *The ellipticity is a necessary condition for the stability* *425*
9.3 Beltrami Equation 426
9.3.1 *A decomposition of the differential* *426*
9.3.2 *The Beltrami equation* *428*

9.3.3 *Local closeness to the sheaf of solutions and the Beltrami equation* *428*
9.3.4 *Notes* *431*
9.4 Stability of the Sheaf of Solutions 432
9.4.1 *Statement of the main theorems* *432*
9.4.2 *Generalized Cauchy's formula* *433*
9.4.3 *An estimate for the double layer potential* *434*
9.4.4 *An estimate for the volume potential* *435*
9.4.5 *L^q-estimates of the derivatives of solutions to the Beltrami equation* *436*
9.4.6 *Global closeness to the sheaf of solutions and the Beltrami equation* *439*
9.4.7 *Order of closeness* *442*
9.5 Properties of Mappings Close to the Sheaf of Solutions 444
9.5.1 *Proximity of the derivatives* *444*
9.5.2 *Generalized Cauchy's theorem* *446*
9.5.3 *Generalized Morera's theorem* *447*
9.5.4 *Generalized Liouville's theorem* *449*
