Preface ix

1 Pseudo–differential operators 1
1.1 Elements of the classical calculus 1
1.1.1 Tools in functional analysis 1
1.1.2 Oscillatory integrals and pseudo–differential operators 7
1.1.3 Pseudo–differential calculus 20
1.1.4 Continuity in Sobolev spaces 37
1.1.5 Pseudo–differential operators on C^∞ manifolds . 45
1.1.6 Ellipticity, parametrices, Fredholm property . . 51
1.2 Parameter–dependent pseudo–differential operators . . 63
1.2.1 Symbols with parameters 63
1.2.2 Pseudo–differential operators with parameters . 64
1.2.3 Parameter–dependent ellipticity 71
1.2.4 Meromorphic families of Fredholm operators . . 74
1.2.5 Kernel cut–off operators 85
1.3 Pseudo–differential operators with operator–valued symbols 86
1.3.1 Operator–valued symbols 87
1.3.2 Abstract wedge Sobolev spaces 99
1.3.3 Pseudo–differential calculus 118
1.4 Pseudo–differential operators with cone–shaped exits to infinity 137
1.4.1 Global pseudo–differential operators in $\mathbb{R}^n$ . . . 137
1.4.2 Continuity in Sobolev spaces 151
1.4.3 Classical operators with exit symbols 153
1.4.4 Ellipticity 158
1.4.5 The calculus on manifolds with exits 165

2 Mellin pseudo–differential operators on manifolds with conical singularities 173
2.1 The typical differential operators 174

2.1.1 Manifolds with conical singularities 174
2.1.2 Differential operators of Fuchs type 177
2.1.3 The Mellin transform 182
2.1.4 Weighted Sobolev spaces 195
2.2 Cone pseudo–differential operators without asymptotics 208
2.2.1 Mellin pseudo–differential operators 208
2.2.2 Kernel cut–off and Mellin operator convention . 216
2.2.3 Operator calculus 233
2.2.4 Polar coordinates in pseudo–differential operators 240
2.3 Discrete and continuous asymptotics 246
2.3.1 Weighted Sobolev spaces with discrete asymptotics 246
2.3.2 Analytic functionals 258
2.3.3 Weighted Sobolev spaces with continuous asymptotics 266
2.3.4 Operator–valued Mellin symbols with asymptotics 275
2.3.5 Green and Mellin cone operators with asymptotics 282
2.4 The cone algebras with asymptotics 297
2.4.1 Cone pseudo–differential operators with asymptotics 297
2.4.2 The cone algebras 305
2.4.3 Ellipticity, parametrices, Fredholm property . . 312

3 Pseudo–differential calculus on manifolds with edges 327
3.1 Manifolds with edges and wedge Sobolev spaces 328
3.1.1 Manifolds with edges 328
3.1.2 Edge–degenerate differential operators 331
3.1.3 Anisotropic descriptions of isotropic objects . . 333
3.1.4 Wedge Sobolev spaces 338
3.1.5 Wedge Sobolev spaces with asymptotics 346
3.2 Interior symbols and Mellin operator convention 358
3.2.1 Edge–degenerate symbols 358
3.2.2 The Mellin convention in the edge case 361
3.2.3 Interior symbols with exit behaviour on the infinite cone 368
3.3 The algebra of edge symbols 378
3.3.1 Green symbols 378
3.3.2 Smoothing Mellin symbols 385
3.3.3 Edge symbols 398
3.4 Edge pseudo–differential operators 416

3.4.1 Green, trace and potential operators 416
3.4.2 Edge Mellin operators 424
3.4.3 The local edge operator algebra 429
3.4.4 Global edge pseudo–differential operators 437
3.5 Ellipticity, parametrices, Fredholm property 449
3.5.1 Elliptic edge symbols 449
3.5.2 Ellipticity and parametrices in the edge algebra 463

4 Boundary value problems **473**
4.1 Pseudo–differential operators on the half–axis 473
4.1.1 The Mellin operator conventions 473
4.1.2 Alternative Mellin operator conventions 478
4.1.3 Transmission operators 496
4.1.4 Operators of order zero with the transmission property 504
4.1.5 Green operators of type d 512
4.1.6 Operators of higher order with the transmission property 515
4.1.7 Ellipticity 525
4.2 The symbolic calculus 535
4.2.1 Interior symbols 535
4.2.2 Some classes of operator–valued symbols 541
4.2.3 Green, trace, and potential boundary symbols . 550
4.2.4 Boundary symbols 569
4.3 The algebra of boundary value problems 579
4.3.1 The local calculus 579
4.3.2 Boundary value problems on a C^∞ manifold with boundary 594
4.3.3 Ellipticity, parametrices, Fredholm property . . 608

Bibliography **617**

Index **630**
