

CONTENTS

1	THE BIRTH OF A PARADIGM	1
1.1	From the Great Wave to the Great War	1
1.1.1	Hydrodynamics	1
1.1.2	Nonlinear diffusion	4
1.1.3	Transformation theory	6
1.1.4	A theory of matter	8
1.2	Between the wars	8
1.3	Nonlinear research from 1945 to 1985	11
1.3.1	Nerve studies	12
1.3.2	Autocatalytic chemical reactions	13
1.3.3	Solitons	15
1.3.4	Local modes in molecules and molecular crystals	20
1.3.5	Elementary particle research	21
1.4	Recent developments	22
	References	23
2	LINEAR WAVE THEORY	29
2.1	Dispersionless linear equations	29
2.2	Dispersive linear equations	31
2.3	The linear diffusion equation	32
2.4	Driven systems	34
2.4.1	Green's method	35
2.4.2	Fredholm's theorem	37
2.5	Stability	39
2.5.1	General definitions	39
2.5.2	Linear stability	40
2.5.3	Signaling problems	41
2.6	Scattering theory	42
2.6.1	Solutions of Schrödinger's equation	43
2.6.2	Gel'fand–Levitan theory	46
2.6.3	A reflectionless potential	50
2.7	Problems	51
	References	57
3	THE CLASSICAL SOLITON EQUATIONS	58
3.1	The Korteweg–de Vries (KdV) equation	60
3.1.1	Long water waves	60
3.1.2	Solitary wave solutions	61

3.1.3	Periodic solutions	62
3.1.4	A Bäcklund transform for KdV	65
3.1.5	N -soliton formulas	72
3.2	The sine–Gordon (SG) equation	76
3.2.1	Long Josephson junctions	76
3.2.2	Solitary waves	78
3.2.3	Periodic waves	81
3.2.4	Nonlinear standing waves	84
3.2.5	Two-soliton solutions	89
3.2.6	More spatial dimensions	91
3.3	The nonlinear Schrödinger (NLS) equation	95
3.3.1	Nonlinear wave packets	95
3.3.2	Modulated traveling waves	97
3.3.3	A BT for NLS	100
3.3.4	Transverse phenomena	102
3.4	Summary	106
3.5	Problems	106
	References	114
4	NONLINEAR DIFFUSION IN EXCITABLE MEDIA	118
4.1	Simple nonlinear diffusion equations	119
4.1.1	Fisher’s equation	119
4.1.2	The Burgers equation	123
4.2	The Hodgkin–Huxley (H–H) system	124
4.3	The FitzHugh–Nagumo (F–N) equation	131
4.4	Stability analysis	133
4.5	Neural novelties	141
4.5.1	Decremental conduction	141
4.5.2	Tapered fibers	145
4.5.3	Threshold effects	146
4.5.4	Spatial chaos	150
4.5.5	Dendritic logic	151
4.6	More space dimensions	157
4.6.1	Two-dimensional nonlinear diffusion	158
4.6.2	Nonlinear diffusion in three dimensions	159
4.6.3	Turing patterns	163
4.6.4	Hypercycles	165
4.7	Summary	166
4.8	Problems	166
	References	176
5	NONLINEAR LATTICES	180
5.1	Basic nonlinear lattices	181
5.1.1	The Toda lattice soliton	181

5.1.2	Self-dual lattices	184
5.1.3	Nonintegrable lattices	185
5.2	The discrete sine–Gordon (DSG) equation	187
5.2.1	Discrete kinks	187
5.2.2	Discrete breathers	189
5.3	Nonlinear Schrödinger (NLS) lattices	190
5.3.1	The discrete NLS equation	190
5.3.2	The Ablowitz–Ladik equation	194
5.3.3	Salerno’s equation	196
5.3.4	The Izergin–Korepin equation	198
5.4	The discrete self-trapping equation	198
5.4.1	Stationary solutions	200
5.4.2	Stability of stationary solutions	204
5.4.3	Chaos	205
5.5	Dissipative lattices	206
5.5.1	Quasiharmonic lattices	206
5.5.2	Myelinated nerves	211
5.5.3	The emergence of form by replication	215
5.6	Biological solitons	216
5.6.1	Alpha-helix solitons in protein	217
5.6.2	Globular proteins	220
5.6.3	Solitons in DNA	222
5.7	Assemblies of neurons	225
5.8	Summary	228
5.9	Problems	228
	References	235
6	INVERSE SCATTERING METHODS	241
6.1	Linear scattering revisited	243
6.1.1	Scattering solutions, bound states, and upper half plane poles	243
6.1.2	Why the upper half plane poles must be simple	245
6.1.3	The Gel’fand–Levitan equation again	248
6.1.4	Any questions?	253
6.2	Inverse scattering method for KdV	254
6.2.1	General description	254
6.2.2	Some examples	257
6.2.3	Reduction to Fourier analysis in the small am- plitude limit	261
6.3	Two-component scattering theory	264
6.3.1	Linear theory	264
6.3.2	ISMs for two-component scattering	269
6.4	The sine–Gordon (SG) equation	271
6.5	The nonlinear Schrödinger (NLS) equation	277

6.6	Conservation laws	280
6.6.1	Conservation laws for the KdV equation	280
6.6.2	Conserved densities for matrix scattering	282
6.7	Summary	284
6.8	Problems	284
	References	292
7	PERTURBATION THEORY	294
7.1	Perturbed matrices	295
7.2	A damped harmonic oscillator	297
7.2.1	Energy analysis	297
7.2.2	Multiple time scales	299
7.3	Energy analysis of soliton dynamics	303
7.3.1	Korteweg–de Vries (KdV) solitons	303
7.3.2	Sine–Gordon (SG) solitons	306
7.3.3	Nonlinear Schrödinger (NLS) solitons	309
7.4	More general soliton analyses	311
7.4.1	Multiple scale analysis of an SG kink	311
7.4.2	Variational analysis of an NLS soliton	316
7.5	Multisoliton perturbation theory	321
7.5.1	General theory	321
7.5.2	Kink–antikink collisions	326
7.5.3	A Green function for soliton radiation	328
7.5.4	Radiation from a fluxon	332
7.6	Neural perturbations	334
7.6.1	The FitzHugh–Nagumo nerve model	334
7.6.2	Electrodynamic (ephaptic) coupling of nerves	340
7.7	Summary	344
7.8	Problems	345
	References	353
8	QUANTUM LATTICE SOLITONS	355
8.1	Quantum oscillators	355
8.1.1	A classical nonlinear oscillator	355
8.1.2	The birth of quantum theory	357
8.1.3	A quantum linear oscillator	361
8.1.4	The rotating wave approximation	364
8.1.5	The Born–Oppenheimer approximation	367
8.1.6	Dirac’s notation	369
8.2	Self-trapping in the dihalomethanes	370
8.2.1	Classical analysis	372
8.2.2	Quantum analysis	374
8.2.3	Comparison with experiments	378
8.3	Boson lattices	379

8.3.1	The discrete self-trapping equation	380
8.3.2	A lattice nonlinear Schrödinger equation	383
8.3.3	Soliton wave packets	389
8.3.4	The Hartree approximation (HA)	390
8.4	More general quanta	396
8.4.1	The Ablowitz–Ladik equation	396
8.4.2	Salerno’s equation	398
8.4.3	A fermionic polaron model	400
8.4.4	The Hubbard model	404
8.5	Energy transport in protein	406
8.5.1	Dynamic equations	406
8.5.2	Experimental observations	411
8.5.3	Comments	420
8.6	A quantum lattice sine–Gordon equation	421
8.7	Theoretical perspectives	423
8.7.1	Number state method (NSM)	424
8.7.2	Quantum inverse scattering method (QISM)	425
8.7.3	QISM analysis of the DST dimer	427
8.7.4	Comparison of the NSM and the QISM	429
8.8	Summary	431
8.9	Problems	431
	References	443
9	LOOKING AHEAD	447
	References	454
Appendix A	Conservative systems	455
Appendix B	Multisoliton formulas	458
B.1	The KdV equation	458
B.2	The SG equation	458
B.3	The NLS equation	460
B.4	The Toda lattice (and a nonlinear electric filter)	460
