Preface to the English Edition	xi
Preface to the Japanese Edition	xiii
Outline of the Theory and Objectives	xvii
Nomenclature used in this book	xx
Chapter 1. Wave Phenomena and Hyperbolic Equations	1
1.1 Equations of wave phenomena	1
(a) The vibration of a string	1
(b) The equation of oscillation of a spring	5
(c) The equation for the propagation of sound	8
(d) Maxwell's equations, elastic equations	12
1.2 Hyperbolic partial differential operators	16
(a) Hyperbolic differential operators	16
(b) Problems that we will consider	18
1.3 Formulae for solutions of an initial value problem for a wave equation	19
Chapter summary	27
Exercises	27
Chapter 2. The Existence of a Solution for a Hyperbolic Equa- tion and its Properties	31
2.1 Finite propagation speed, domains of dependence and influence	31
(a) Energy estimate of the solution	34
(b) The domain of dependence	44
(c) The domain of influence	46
(d) Finite speed of propagation	47
2.2 An a priori estimate of the solution	48
(a) On the premise of results for elliptic equations	48

(b) Energy estimate	51
(c) An estimate of partial derivatives of higher order	52
(d) Elimination of the extra assumption, approximation due a mollifier	58
(e) Energy conservation	61
2.3 Existence of the solution	63
(a) The Hille-Yosida theorem	63
(b) The operator $\mathcal{A}$	67
(c) The existence of a solution for the initial boundary value problem	75
(d) Smoothness of the solution	77
Chapter summary	81
Exercises	81
Chapter 3. The Construction of Asymptotic Solutions	83
3.1 An asymptotic solution of the hyperbolic equation	83
3.2 The Eikonal equation	86
(a) Canonical equations	87
(b) The construction of the solution	91
3.3 The transport equation and the behaviour of the asymptotic solution	97
(a) The transport equation	97
(b) The behaviour of the asymptotic solution	100
(c) The propagation of sound in air in which the temperature is not constant	102
3.4 The propagation of singularities	103
(a) The composition of a smooth function with a distribution	104
(b) Propagation of discontinuities	107
(c) The propagation of a general singularity	112
(d) The solution for a discontinuous initial value	113
3.5 The asymptotic solution of the wave equation and geometrical optics	116
(a) The properties of the solution of the Eikonal equation	116
(b) The transport equation of the wave equation	118
(c) Curvature	120
(d) The change of variable and the Laplacian	123
(e) The value of $\Delta\varphi(\mathbf{x})$	127

(f) An expression of the solution of the transport equation and the behaviour of the principal term	129
(g) The solution when the wave equation incorporates friction	131
(h) Reflection in the wave equation	132
(i) Refraction	136
3.6 The asymptotic solution of an elastic wave	145
Chapter summary	150
Exercises	150
Chapter 4. Local Energy of the Wave Equation	153
4.1 Local energy	153
4.2 A uniform decay of the local energy	159
4.3 The exponential decay of the local energy	167
Chapter summary	172
Exercises	173
Perspectives on Current Research in Mathematics	175
Bibliography	179
Cited references	179
General references	179
Solutions to the Exercises	181
Index	189
