PART I	
DETERMINISTIC LINEAR SYSTEMS	
1. ORDINARY LINEAR SYSTEMS	3
1.1. Dynamic equations	3
1.2. Continuous-time responses	6
1.3. Discrete-time responses	11
1.4. Transformation of dynamic equations to algebraic equations	12
1.5. Impulse responses	18
1.6. Transfer functions and block diagrams	20
1.7. Minimum-phase equations	25
1.8. Bibliography	27
1.9. Problems	28
2. FEEDBACK CONTROL OF STEADY-STATE ERRORS	35
2.1. Steady-state errors	35
2.2. Unity feedback	37
2.3. Non-unity feedback	40
2.4. Disturbances	42
2.5. Bibliography	43
2.6. Problems	44
3. STABILITY IN LINEAR SYSTEMS	47
3.1. Oscillations, stability, and transient response	47
3.2. Mathematical stability criteria for continuous-time systems	52
3.3. Mathematical stability criteria for discrete-time systems	54
3.4. The Nyquist diagram	57
3.5. Phase margin and gain margin	61
3.6. Bibliography	65
3.7. Problems	66
4. ROOT-LOCUS DIAGRAMS	70
4.1. Introduction	70
4.2. Angle and magnitude conditions	72
4.3. Rules for drawing root-locus diagrams	75
4.4. Additional features of root-locus diagrams	80
4.5. Discrete-time systems	83

4.6. Bibliography	84
4.7. Problems	85
5. CONTROLLER TRANSFER FUNCTIONS	89
5.1. Introduction	89
5.2. Phase advance and phase lag	90
5.3. Comparison and combination of phase advance and phase lag	97
5.4. Bibliography	100
5.5. Problems	101
6. ANALYTIC DESIGN OF CONTROLLERS	103
6.1. Performance criteria	103
6.2. Evaluating quadratic performance criteria	108
6.3. Fixed-configuration design procedure for continuous-time systems	112
6.4. Bibliography	115
6.5. Problems	116
7. STATE SPACE	118
7.1. Introduction	118
7.2. State space	121
7.3. Controllability	123
7.4. Observability	126
7.5. General descriptions of linear systems	129
7.6. Bibliography	132
7.7. Problems	134
8. OPTIMAL LQP-CONTROL	137
8.1. Introduction	137
8.2. Dynamic programming	138
8.3. Multi-dimensional processes	143
8.4. Non-stationary problems	151
8.5. Tracking problems	154
8.6. Bibliography	163
8.7. Problems	164

PART II

DETERMINISTIC NON-LINEAR SYSTEMS

9. OPTIMAL CONTROL THEORY	169
9.1. General equations of optimal control	169
9.2. The Euler equation of the calculus of variations	171
9.3. The Pontriagin maximum principle	176
9.4. Problems with saturating control variables	179
9.5. Distinctive features of dynamic programming	183
9.6. Bibliography	185
9.7. Problems	186

10. THE PHASE PLANE	188
10.1. Introduction	188
10.2. Relay control systems	191
10.3. Some other non-linearities	197
10.4. Topology of phase portraits	202
10.5. Bibliography	205
10.6. Problems	206
11. STABILITY	209
11.1. Introduction	209
11.2. Liapunov's direct method	210
11.3. Describing functions	218
11.4. Bibliography	227
11.5. Problems	228
<p>PART III SYSTEMS WITH UNCERTAINTY</p>	
12. PROBABILITY AND RANDOM PROCESSES	235
12.1. Introduction	235
12.2. Probability	235
12.3. Probability distributions	239
12.4. Discrete-time random processes	245
12.5. Mathematical models for continuous-time stochastic variables	248
12.6. Continuous-time random processes	251
12.7. Bibliography	259
12.8. Problems	259
13. OPTIMAL STOCHASTIC LQP-CONTROL	265
13.1. Introduction	265
13.2. Fixed-configuration problems	268
13.3. Semi-free problems with uncertainty only about future states	271
13.4. Semi-free problems with uncertainty about present states	275
13.5. Generalizations	282
13.6. Bibliography	289
13.7. Problems	289
14. ESTIMATING UNCERTAIN STATES	297
14.1. Introduction	297
14.2. Bayes's rule	299
14.3. Estimation in linear dynamic systems (Kalman filter)	302
14.4. Estimation by linearization in non-linear systems (extended Kalman filter)	310
14.5. Statistical methods of estimation	314
14.6. Linear mathematical models for parameter estimation	321
14.7. Bibliography	326
14.8. Problems	327

15. STRUCTURE OF STOCHASTIC CONTROLLERS	333
15.1. Introduction	333
15.2. Properties of stochastic control problems	335
15.3. Intentional errors, probing, and caution	337
15.4. Structure of control laws	341
15.5. Bibliography	342
ANSWERS TO PROBLEMS	343
BIBLIOGRAPHY	353
INDEX	361
