

Contents

<i>Chapter 1</i>	FUNCTION SPACES	1
1-1	Vector spaces, 1; 1-2 Metric spaces, 7; 1-3 Function spaces, 11; 1-4 The space $\mathcal{L}_2[a,b]$, 18; <i>References</i> , 23; <i>Problems</i> , 23	
<i>Chapter 2</i>	INTEGRAL OPERATORS	24
2-1	Operators in Hilbert space, 24; 2-2 Null spaces and inverses, 28; 2-3 Kernel matrices, 32; 2-4 Spectral decomposition, 38; 2-5 The Fredholm alternatives, 43; 2-6 Integral operators, 45; <i>References</i> , 49; <i>Problems</i> , 50	
<i>Chapter 3</i>	APPLICATIONS OF INTEGRAL EQUATIONS	51
3-1	Differential and integral operators, 51; 3-2 Initial and boundary value problems, 53; 3-3 Generalized functions, 58; 3-4 Green's function, 62; 3-5 Singular kernels, 69; 3-6 Linear systems, 75; <i>References</i> , 79; <i>Problems</i> , 79	
<i>Chapter 4</i>	METHODS OF SOLUTION	81
4-1	Successive approximations, 81; 4-2 Algebraic methods, 87; 4-3 Collocation and least squares methods, 93; 4-4 Symmetric operators, 98; 4-5 Miscellaneous methods, 105; <i>References</i> , 112; <i>Problems</i> , 112	
<i>Chapter 5</i>	INTEGRAL TRANSFORMATIONS	115
5-1	Unitary operators, 115; 5-2 The Fourier transformation, 118; 5-3 Other integral transforms, 124; 5-4 Transforms and generalized functions, 129; 5-5 Applications, 132; 5-6 Stochastic processes, 139; 5-7 Boundary value problems, 145; 5-8 Evaluation of transforms, 149; <i>References</i> , 154; <i>Problems</i> , 154	
<i>Chapter 6</i>	FURTHER METHODS	157
6-1	Potential function methods, 157; 6-2 Diffusion and scattering problems, 169; 6-3 Wiener-Hopf equations, 189; 6-4 Dual integral equations, 202; 6-5 Non-linear integral equations, 222; <i>References</i> , 236; <i>Problems</i> , 238
